Indicate each item on inventory form which is being continued below.

SIGNIFICANCE

The core of this house retains integrity of design, workmanship, materials, and location in the survival of a late First Period single-cell house, making it eligible under criterion C. The subsequent additions to the original core represent stages in the enlargement and stylistic transformation of the First Period house which, when studied, may yield information important to our understanding of transitional house plans under criterion D.

EXTERIOR DESCRIPTION

922 Dale Street is a five bay, 2 1/2 story structure two cells deep, with paired internal chimneys. A small one story porch door projects from the east end; a long one story wing projects from the rear.

The original late First Period core of the building today comprises only the northeast end. It was 3 bays wide and 2 1/2 stories high; with a chimney on the west wall and a roof pitch of 37 degrees. Between 1740 and 1780, this core was enlarged by adding another one cell room to the west of the chimney. The present plan was reached in the Federal Period by adding two rooms onto the south (front) side and replacing the central chimney with twin stacks.

MAJOR FIRST PERIOD FEATURES

The main evidence of the transitional First Period one cell core of the house remains in the first floor northeast corner room and in the attic. The first floor northeast room has a transverse summer beam with beveled chamfer and lamb's tongue stops. The exposed end girt and back plates have very crude beveled chamfers with no stops. The combination of beveled chamfers and less careful finishing of the beams enclosing the room than on the summer indicates an early 18th century date. The former chimney girt in the northwest room has filled-in stud mortises, indicating that it was the end girt of the original structure.

The attic retains evidence of the roof of the original core. Its east end rafter remains framed into the present east gable, revealing a roof pitch of 37 degrees. The lower portions of the four most easterly rafters on the north slope are original, and indicate three purlins per slope in a principal-rafter roof.

LATER SIGNIFICANT FEATURES

The rest of the house retains good typical Federal fireplace mantels and panels in the later rooms.
