SHOTWELL HALL, WEST LIBERTY STATE COLLEGE
WEST LIBERTY, WEST VIRGINIA, OHIO COUNTY
Section Number 7 Page 2

Shotwell Hall, also known as Fraternity Hall, was used as a male dormitory until being made into faculty offices. Built as part of a PWA project, Shotwell Hall was designed by noted Wheeling architect, Fredrick F. Faris. The building's Colonial Revival design was popular in the early part of the 20th century for public or state buildings.

Located on the west side of what has become a quadrangle of buildings, Shotwell Hall was originally constructed as a male dormitory to house students on campus. Before its construction students were roomers in local houses. In recent years it has been used to house faculty offices.

Colonial Revival in style, the building has two and a half stories, with nine bays. The red brick over concrete block structure has brick quoins at the corners. Limestone details include a water table, keystones over the windows, and stone sills. The five center bays project out with a recessed center door and transom having decorative wood moulding with fluted piers, side panels, and a broken pediment. Part of this pediment has been replaced in a fiberglass or plastic to compensate for the HAVC units installed under each window opening. The windows have also been replaced with metal 6/6 double-hung openings, and they have brick voussairs. The small terrace at the front door has been altered at the side for a handicapped ramp. The terrace retains the original metal railing.

Over the center door is a pedimented gable end with a center cartouche with shield and swag chain, and dentils. The cornice also has a dentiled entablature. There are four front or east gable dormers with slate sides. The roof is gable with the original slate shingles.

The north and south ends have two bays with the third floor having one window opening. The roof has a gable end with return.

The west side has a projecting center of five bays with two end doors with the moulding carried upwards to the stair landing window. Above that is a circular limestone medallion. There are nine dormers across the upper level. Details on the building include the downspouts which end in a metal ground spout with a lion holding a ring in its mouth.

On the interior the configuration of the rooms remain the same, with possibly two rooms being modified with new partition walls. There are two staircases on the west side of the building. Records indicate that the dormitory was originally designed to hold 48 students, but the third floor was remodeled in 1960 to hold 63 residents.

SHOTWELL HALL, WEST LIBERTY STATE COLLEGE
WEST LIBERTY, WEST VIRGINIA, OHIO COUNTY
Section Number 8 Page 2

Located high on a hill in Ohio County is West Liberty State College, which has been a seat of learning since 1837. When crowding forced the move from the original location of the college in West Liberty, the present site on the south side of town was selected. Shotwell Hall was built in the 1930s with money from the Public Works Administration. The period of significance is 1937 when Shotwell Hall was constructed. The building is noted under Criterion C for Architecture.

Shotwell Hall is named for Nathan Shotwell, first president of the West Liberty Academy (founded 1837), the forerunner of the modern West Liberty State College. He served from 1838 to 1854 and is considered the institution's founding father. John C. Shaw's presidency of the West Liberty State Normal School lasted from 1908 to 1919. He initiated the college's move from a four-acre site in town, now occupied by the West Liberty Elementary School, to a location on the southern edge of the village, where the present institution is now centered.

The years, 1919-1943, were transitional years in the college's history: the evolution of a small teacher's preparatory school to a multi-faceted institution offering a strong liberal arts and sciences curriculum. As the first building on the new campus, Shaw Hall served as a women's dormitory, opening in 1920; it is the college's oldest structure. It remained the only dorm until Shotwell Hall opened in 1937, and was the only women's residence hall until 1956.

Shotwell Hall was designed by Wheeling architect, Fredrick F. Faris, whose original building plans were replaced with drawings for a smaller building. Part of a Public Works Administration project, the contractor Don Byrum, Inc. of Wheeling, was awarded the contract for \$54,342.00. Ground was broken in 1936, with the building ready for occupancy by the first 36 boarders on February 1, 1937. This Colonial Revival building has a number of details popular in the early 20th Century. These details include the broken pedimented doorway and pedimented gable end above, the brick quoins, limestone details, and dormers.

Within a few years of its opening, the state funded additional construction including a new library and classroom building, a classroom and laboratory structure and a gymnasium. West Liberty was a normal school, or teacher preparatory institution. Growth in the 1920s, however, led to a change in 1931, when the college became West Liberty State Teachers College. Continued growth in the Depression years necessitated a place for resident male students. President Paul E. Elbin (1935-70) garnered New Deal monies for construction of Shotwell Hall. This building opened in 1937 and remained the only male dorm until 1964. Six years after Shotwell opened its doors, West Liberty changed its name to West Liberty State College.

Today, the Shotwell is a faculty office building. The building is well maintained and retains its historic character and relationship to the campus setting.
