DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The James Hamilton House is an eclectic style structure, built between 1857 and 1861. The house is two-and-a-half stories in height, five bays across the front, and four bays deep. The main block is covered by a simple gable roof with overhanging eaves and is flanked by two pairs of interior chimneys. A onestory cast iron porch extends along the front facade of the structure, as well as along its two sides. The interior plan of the building is four-over-four, with a central stair hall.

Rather than its basic house forms, however, the extraordinary features of the Hamilton House are its eclectic features which are a combination of Federal and Greek Revival stylings. The most prominent features of the house are its cast iron porch columns, railings, and decorative grillwork. Their style is a combination of Gothic, Classical, and Byzantine motifs. The Gothic columns have octagonal bases, clustered colonettes, and foliated capitals. The porch railing is a popular Victorian geometric pattern with foliated cusps, connected by foliated bosses. The decorative grillwork is a more freely flowing foliated classical pattern, framed within variations on saracenic arches. The underside of the porch cornice is decorated with a shallow, classical grillwork. It extends along the entire length of the porch. Each column location is accented by a stylized acanthus leaf located above the cornice line.

The other prominent features of the house are the overhanging eaves and the triangular pedimented gable ends supported by Italianate-style brackets with pendant drops. The brackets frame the underside of the eaves and are a strong three-dimensional architectural element, which, in combination with the cast iron porch, alter the planar aspects of the simple block house from beneath. The four large chimneys with their raked stacks are a prominent feature of the structure's skyline and stand in contrast to the low profile of the roof line.

More subtle architectural features include the use of stone lintels over the windows and main entrance, a Greek Revival main entrance with a framing pilaster, rectangular side lights, trabeated overlights, a palladian window opening on the second floor above the main entrance, a balancing effect of the louvered shutters to the exterior wall proportions, and large floor-to-ceiling windows on the main floor.

The house is constructed of load-bearing masonry walls, stuccoed on the exterior and plastered on the interior. The structural members timber, and they span between the exterior walls and the load-bearing central hall walls. The roof is supported by timber trusses located above the half-story level. These are covered by metal panels.

STATEMENT OF SIGNIFICANCE

The Dr. James S. Hamilton House (Alpha Delta Pi Sorority House) is significant both architectually and historically because it exemplifies the esthetic as well as the financial achievements of pre-war Athens. Created by a local architectcontractor-builder in the heyday, yet twilight, of the antebellum South, it evidences both the culmination of the skills of its builder, as well as the accumulated wealth of its owner.

Like many businessmen in the Athens-Clarke County area during the mid-nineteenth century, Doctor James Sherwood Hamilton (1817-1888) found the potential for fame and fortune very attractive. Residents of this small Georgia community enjoyed the best of two worlds: the intellectual stimulation of the university and the promise of wealth through industrial growth.

Hamilton, a native of Columbia County, Georgia, had graduated from the university in Athens in 1836, and obtained a medical degree in 1839, and after his marriage to Rebecca Crawford of Columbia County in 1843, was drawn back to this spot of his youth. He was later a director of numerous railroads, a trustee of the university, and the president of the Princeton Manufacturing Company. Dr. Hamilton's sister Eugenia married Albin P. Dearing and their home stands today as the Kappa Alpha Theta House.

Hamilton was particularly attracted by the textile industry in Athens. In 1845, almost fifteen years before he built his permanent residence on South Milledge Avenue, he purchased the Princeton Factory, a cotton textile mill located on the "Oconee River. This mill was the third of its kind to be established in the Athens area, and Hamilton found the textile manufacturing business very lucrative. He continued to own and operate the mill until his death.

It was apparently from the textile manufacturing business that Hamilton accumulated enough wealth to construct his elaborate home which bespeaks his stature and importance in the community. In 1857, Hamilton purchased two lots-nos. 50 and 55- on South Milledge Avenue for \$800.00 The University of Georgia was the Grantor of this property, having acquired it as a part of the 640 acres of land donated to the university by Governor John Milledge when the state institution of higher education was founded. Milledge Avenue was settled between 1857 and 1861, during which time Hamilton built this house. Ross Crane, a New Jersey native the same contractor/architect who built the First Presbyterian Church of Athens, as well as his own residence at 247 Pulaski Street (now the S.A.E. Fraternity House), was the man Hamilton hired to build his house.

CONTINUATION SHEET	ITEM NUMBER	PAGE	Z

The central entrance hall is wide. It serves the structure as a space for social gatherings as well as for general circulation purposes. The hall cornice is a simple moulded design, and the ceiling is decorated with a plaster chandelier boss. The stair is located to the left rear of the hall door where it turns and rises again toward the front of the house. The tapered octagonal newel post, with a turned flared cap and a mahogany railing and banister, are still in place. They extend to the third floor in an open stairwell.

The primary rooms to the left of the central stair are double parlors or drawing rooms, separated by sliding panel doors. These rooms are identical in size, decorations, and arrangement. Each has a fireplace centered between the two exterior windows. Dual windows are also opposite the connecting doorway. These rooms have an elaborate high relief plaster cornice in a Classical floral pattern, framed within a moulded border on both the wall and the ceiling. A heavily plastered and foliated chandelier boss decorates the center ceiling of each of these drawing rooms.

The primary rooms located to the right of the entrance hall on the first floor have been modified. They are reported to have been a drawing room on the front and a dining room on the rear.

The second floor has also been altered. Bathroom and closet space have been added. The original interior arrangement, however, remains strongly regulated by the load bearing interior walls. The most drastic alteration of the interior space on the second floor is the addition of a bathroom at the front of the central hall. It occupies half of the original hall space. The interior details of the second floor bedrooms have been removed, and the fireplace has been sealed and plastered. The third floor remains unaltered.

The later use of the house as a sorority necessitated the construction of dormitory space in the rear. This addition extends straight back from the rear of the structure. It is not easily visible from the front of the building. A dining room addition is in keeping with the style, scale, and color composition of the house, so any adverse visual effect is minimized.

The house is set far back from the street on a lot with many trees. Many of these trees are very old hardwoods and magnolias which add to the structure's distinctiveness and serve to buff the noise created from automobile and pedestrian traffic on South Milledge Avenue. The house, in effect, has very much retained its original landscape setting. The gardens and landscaping of the home were mentioned as one of Georgia's most significant gardens in Loraine M. Cooney's <u>Garden History</u> of Georgia.

Crane started work on the structure in 1857, but it was not until 1861, when the ornamental ironwork trim on the exterior of the house was added, that the house was completed. The ironwork was manufactured in the Wood-Perot Foundry in Philadelphia in 1860 and then shipped to Athens via Savannah just prior to the outbreak of the American Civil War and the Federal blockade of southern ports. Hamilton selected the style-no. 38- from a catalog, placed his order in November 1860, and received shipment the following January. Its price was \$2,100.00.

The Hamiltons had nine children, several of whom were born after this house was built. All of the children grew up at this home, making it an active domestic center as the Civil War approached and the life they had grown accustomed to was to change so drastically.

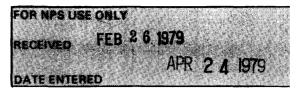

Dr. Hamilton and his family weathered the Civil War here and he died here in 1888. After Mrs. Hamilton's death in 1896, a court suit ensued among the heirs and creditors. Dr. Hamilton had willed the house and factory to his wife and children jointly and the estate had lost money over the years due to mismanagement. His sonin-law, S. Guyton McLendon (husband of Emily Hamilton and later Georgia's Secretary of State) effectively broke the will in a law suit. As a result of this suit, the house was sold at a Sheriff's auction on the courthouse steps, the first Tuesday in October, 1900. The house was purchased by the five daughters for \$10,836.00. These daughters lived here for several years until they decided that it was too large a home to maintain.

At the time of the sale, the house was described as being located on approximately eight acres and having "a brick dwelling containing 14 large rooms, besides closets, pantrys, etc. Covered in tin in good order. Also a large kitchen, also a smoke house, also a two room servants house, also a corn crib, also carriage house and stables and all in good repair and constituting the most elegant and desirable home in the city of Athens".

This description is in marked contrast to the condition recalled by the new owners. About 1906-7 Edward Reginald Hodgson, III (later Junior) (1871-1967) and his wife Mary Arthur McCullough (1881-1967), who married in 1905, bought the house, then still the only one on the block. Mr. Hodgson found the house in bad repair with pigeons flying inside. He spent a year repairing the premises. As part of this effort, he tore down the outbuildings, put in granite frontstairs and electricity and running water. CONTINUATION SHEET

ITEM NUMBER 8 PAGE 3

Mr. Hodgson was president of the Empire State Chemical Company, a fertilizer firm, and he and his wife had three sons born here. This was their home for nearly thirty-five years, and while there, was the scene of at least one wedding, as well as their daughter's wedding reception in 1927.

The Hodgson family had come to Athens in 1839 having migrated to the United States from England in 1836. They had long been involved with the stagecoach business in Athens, and also the establishment of Georgia Institute of Technology in Atlanta.

Having continued to live in this house, the Hodgsons sold it on July 1, 1939 for \$27,500 to the Beta Nu Trustees, Incorporated, representing the Alpha Delta Pi Sorority. The sorority continues to own and maintain the house as a dormitory and chapter house, using it for meetings and social events.

From an architectural point of view, the house is an excellent example of eclectic residential architecture popular in the state of Georgia during the midnineteenth century. Only a limited number of homes remain that retain the castiron porches as does this structure. The Hamilton house ranks high among these due to the quality of design of the ironwork in relation to the overall plan and styling. Locally, as an example of the work of Ross Crane (the most prominent local antebellum architect) it is significant. Historically, the role of the owners of the house in the development of Athens is significant in that the house reflects the type of place chosen and built by an antebellum industrialist at the peak of his career. Despite his wealth Hamilton chose a local man to build his home, and by so doing helped to influence the architectual development of the town. The house is also significant as an example of the adaptive use of older structures in its approximately 40 years as a sorority chapter house.
