Describe the present and original (if known) physical appearance

The Old Engine House is built into the side of a hill directly above the Stillwater River in the Town of Orono. The river is located behind the building to the south, while to the east, west and north are nineteenth century residential buildings on North Main Street. The engine house is one and one-half stories high at grade with an additional floor exposed above ground on three sides where the station is constructed into the side of the hill.

Built of wood with clapboard siding, the rectangular-shaped engine house has a gable roof with the narrow end facing North Main Street. The building has paneled doors and original sash with small-pointed lights. Each gable end forms a full pediment which has dentils. At the north end of the roof is a bell tower with a hipped roof, and at the south end is a hose tower with a flat roof.

The interior of the building contains original woodwork on the floors, walls and ceilings. The walls have tongue and groove paneling while the windows have molded architrave trim with corner blocks.

Specific dates 1892 **Builder/Architect** --

Statement of Significance (in one paragraph)

The Old Fire Engine House is historically significant as a virtually unaltered example of a late nineteenth century fire station. The building is also locally important to the northern half of the Town of Orono which was separated from the rest of the community by the Stillwater River. This area developed in the post Civil War period as an industrial center with factories and working class housing.

Although a volunteer fire department was organized in the late 1830's, an engine house was not built until the 1860's. Known as Monitor Hall, this structure served the town center south of the Stillwater River. The area north of the river, known as Webster, had its own engine but it was stored in buildings not specifically designed for that purpose.

At a town meeting on July 2, 1892, it was voted to appropriate \$2,000 to build an engine house. The completed structure, designed in a modified Colonial Revival style, contained a large hall at grade level to house the engine. Below grade, where the structure was built into the side of a hill, were the horse stalls. A bell tower located at the front of the building called the volunteer firemen. In the rear is a hose tower.
