United States Department of the Interior National Park Service

National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Function or Use

Located 2.3 miles southeast of Valentine, the Borman Bridge [Niobrara River Bridge] spans the Niobrara River in a rural Cherry County setting that has changed little since the structure's period of significance. Other than maintenance-related repairs, noted below, the bridge remains essentially unaltered as it continues to carry vehicular traffic. The Borman Bridge today retains a high degree of integrity of location, design, setting, materials, workmanship, feeling and association. A description of the structure follows:

construction date: 1916 span number: 1 130.0' construction cost: \$4230.00 span length: 131.0 total length: current condition: good

roadway wdt.: 12.7' moderate substructural replacement alterations:

superstructure: steel, 7-panel, pin-connected Pratt through truss

substructure: concrete abutments (extended from original steel cylinders) and wingwalls

floor/decking: timber deck over steel stringers

other features: upper chord: 1 channels with cover plates and lacing; lower chord: 2 looped rectangular

eyebars; vertical: 2 channels with lacing; 1 square eyebar at hip connection; diagonal: 2 looped rectangular eyebars; lateral bracing: round bar; strut: 2 angles; floor beam: Ibeam field bolted to vertical; guardrail: 2 angles; builder's plate: 1916 THE CANTON BRIDGE Co. CANTON OHIO; decorative lacing at portal

State significance of property, and justify criteria, criteria considerations and areas of significance noted above.

On the afternoon of February 16, 1916, the winter ice on the Niobrara River near the western edge of Cherry County began to break up as the river's level rose quickly. The flood that resulted moved downstream, pushing the ice pack in front of it and "virtually eating away the thick ice and destroying the county bridges," lamented the Cherry County Clerk. Before it passed through the county's eastern edge two days later, the flood had swept fourteen bridges away and damaged or destroyed seven others. Only four bridges over the Niobrara remained passable. In the aftermath of the flood, the county commissioners declared an emergency on February 29th and established a special fund to pay for the extensive repair and reconstruction. A representative from the Canton Bridge Company, which had held the county's annual bridge contract for 1915, conferred with the commissioners and assured them that work by his firm to rebuild several of the bridges would not constitute an annual contract. On March 24th, the commissioners visited the site of the Borman Bridge (1900) southeast of Valentine with the Canton official, and two days later ordered a replacement span from the Ohio-based company. Using steel rolled by Cambria, Canton erected this pinned Pratt through truss within a month, although the county did not pay its \$4230 cost until two years later. The Borman Bridge has carried light traffic since in this sparsely settled region.

The pinned Pratt through truss was the bridge of choice for medium-scale river crossings in Nebraska during the early 1900s, as the Cherry County Commissioners discovered in 1916. Of the fourteen Cherry County bridges surveyed on the Niobrara River (five of which were erected in 1916), thirteen are medium-span Pratts. Due in part to the flood, these Niobrara River bridges represent the bestpreserved group of county trusses in the state. The Borman Bridge is technologically significant as a well-documented example of a mainstay structural type.

For further contextual information regarding bridge building in Nebraska, registration requirements, and property types, see related multiple property listing "Highway Bridges in Nebraska, 1870 - 1942."
