Section number 7 Description Greene House Page #1

---

The Greene House, in Cullman County, is centrally located on a residential block in the city of Cullman. Situated on a 100`x 135` lot facing northeast and 6th Avenue S.E., the 1913 residence was erected in the Neoclassical style. Despite its many owners, the Greene House has undergone few changes.

The two-story, rectangular Neoclassical frame house rests on a stone foundation and is sheathed in white weatherboard (original color yellow). The side-oriented gable roof and projecting portico with pedimented gable are covered with asphalt shingles. A small, rectangular addition of the same period is on the right rear of the house and has a brick foundation. The facade is divided into three bays which articulate the interior spaces. Two interior brick chimneys pierce the ridge of the steep gable roof.

A two-story central projecting portico is the dominant feature on the facade and was not added until after the Greenes moved in. Its massive roof is supported by two fluted Ionic columns. The front gable has a small, semicircular window in the center. An unadorned frieze wraps around the entire house as do brackets under the boxed cornice. Beneath the portico is a one-story, hip-roofed porch that wraps around half of the side elevations. The portico shelters a central second-story deck that has a balustrade with radiating wood members. The porch is supported by ten Tuscan columns that break a plain balustrade. The underside of the porch roofs has beaded board.

The front door has a wood frame and large single pane of glass. The transom and sidelights have a lead coming design which holds thick beveled glass. All the doors, including the front door, feature an ornate lock plate and door handle. The two windows on the first floor facade have 40/1 sashes; the two windows on the second floor facade have 35/1 sashes. The side elevations have 25/1 sashes, and the rear elevation has 20/1 and 10/1 sashes. The small addition has 15/1 sashes and newer replacements. The attic story gable ends have 25/1 rounded window sashes. The four corners feature corner boards with Ionic capitals, and the chimneys have decorative corbeled caps. The gutters are original.

The floor plan is a basic central hall plan with a dining room, living room, kitchen, and study flanking the hall. The rear addition holds a pantry and bath. The second level also has a central hall flanked by three bedrooms and a sitting room. The attic is unfinished. A bath was installed in one of the bedrooms ca. 1931. A door similar to the entry door leads from the hall to the second story deck. The interior has original pine floors on the second level, and oak floors were installed on the first level at some point between 1927 and 1934. The walls are plaster, and the molding around the doorways and the baseboards are painted wood. The dining room has wood panel doors that slide into the wall cavity, and the living room entrance features Ionic columns extending above a partial wall. One cabinet mantel with two-tiered Tuscan columns is still intact. The other three fireplaces were bricked in, and a hot water radiator system was installed ca. 1931. The only contributing outbuilding, a two-car garage, was built during this same time, and a portion of it was converted into servant`s quarters by ca. 1944. A "sucker-rod" pump operated the well that was installed by Mr. Greene; however, the pump is no longer operable or manufactured. The Greene House has retained its integrity as an early 20th-century Neoclassical residence.

Section number 8      Significance      Greene House      Page #1

---

---

CRITERION C (ARCHITECTURE):

The Greene House in Cullman is a fine and intact example of the Neoclassical style which was the prevailing style from 1900 to 1940. Built in 1913, the house features Ionic colossal columns supporting a projecting portico, multi-pane sashes, and symmetrical facade and central hall plan. Fine details including transom and sidelights with lead coming and beveled glass, bracketed eaves, and corner boards with Ionic capitals remain intact.

HISTORICAL SUMMARY:

Ernest Edward Greene moved to Cullman, Alabama, ca. 1905 as Superintendent of the Southern Cotton Oil Company.(1) By the next year he married Emma Adkins, and in 1913 he built his residence at 105 6th Avenue S.E. in Cullman.(2) The Greenes had three daughters, and Mr. Greene had a son from a previous marriage. Ernest Edward Greene was a prominent member of the community because of his position with the oil mill, the community's single most important employer at that time.

The Greenes were members of the First Methodist Church of Cullman, and both were active in religious and social functions.(3) Ernest Edward Greene became ill with influenza in early 1922, and his recovery was very slow. Ernest Edward Greene died in the house by his own hand in July of 1922 and is buried in Cullman City cemetery.(4) None of the Greene children remain in the Cullman area.

The house passed on to several more owners who were also prominent members of the Cullman community. In fact, the Greene House is most associated with John George Luyben, Sr. and his family because they lived there 34 years--longer than any of the previous owners.(5) Today, the Greene House is one of the most distinct examples of Neoclassical Revival in Cullman, Alabama.

THE COLONIAL REVIVAL STYLE:

The Greene House is a good representation of the Neoclassical style that was the dominant domestic style in this country during the first half of the 20th century. The awakened interest in classical forms probably began at the World's Columbian Exposition in Chicago 1893. Photographers and reporters documented the architects' classical designs, and these Neoclassical forms became the popular style throughout the country. The truest phase of the Neoclassical style occurred before 1925; after this time, the less elaborate details distinguished the early examples from the later ones. Use of the Neoclassical style slowly diminished ca. 1930 when it was overshadowed by the other eclectic styles.(6)

The term Neoclassical refers to architecture characterized by symmetry of plan and facade, a pedimented portico supported by colossal columns, and use of Ionic or Corinthian capitals.(7) The houses of this revival era frequently have boxed eaves and wide, heavy frieze bands. Windows usually have a multi-pane upper sash and a single-pane lower sash. This house has one characteristic that is relatively uncommon, which is a full-height entry porch with a full-width porch on the lower level.(8)

NATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEET

Section number 8 Historical Summary Greene House Page #2

---

Examples of Neoclassical structures are found in Cullman and throughout the state of Alabama. Because the style reminded people of antebellum mansions, it easily gained popularity in the South. There are two homes in Cullman that are very similar to this style. Located at 306 7th Street S.E., the Perry Warren House is another fine example of the Neoclassical style and was built just a few years before the Greene House. It, too, has a pedimented portico supported by fluted, Ionic colossal columns. The Hawkins House of 702 2nd Street S.E. is another example of a Neoclassical design in town. Other examples of the Neoclassical style appear in Alabama; however, a comprehensive survey of this type is not complete. Houses like these that appear in Alabama and across the United States stand as evidence of the influence of classical architectural forms.
