National Register of Historic Places Registration Form

NATIONAL

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines* for Completing National Register Forms (National Register Bulletin 16). Complete each Item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, etyles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Describe present and historic physical appearance.

The residence located at 665 McKinley Street in Miramar, a ward of San Juan, Puerto Rico, is one story detached, wood and reinforced concrete, raised above the ground, single family dwelling. The house belongs to the Spanish-Creole (criollo") vernacular, suburb residential typology. The main characteristics of this vernacular form are: raised wooden construction; main living core with rear service wing usually called "martillo", or "hammer", forming an "L" shaped plan with an enclosed porch or courtyard; full length "L" shaped balcony or veranda; hipped or side-gabled, usually high-pitched roof of ceramic tile or corrugated zinc.

The 665 McKinley residence is raised 30" above grade by a series of plinths interconnected by diagonal lattice work panels. This creates an enclosed crawl space or half basement level used for storage, utilities, plumbing, etc. The main facade facing south along McKinley Street, is divided into three bays and the flanking facades into four bays each. The building's exterior is completely sheeted in horizontally shiplapped wood board siding. The roof is "A" framed, having a single gable at its rear end and a subordinate gable within the main gable at its front end. The subordinate gable apex is located at the center point of the western slope of the main gable. The gable ends terminate in raking and horizontal cornices to form pediments. The tympanums are pierced by triangular openings screened by lattice work.

The small gable end crowns the left bay of the street facade. This section of the facade contains a four sash casement window with corresponding transom lights. The window is surmounted by a shallow shed roof just below the horizontal cornice of the pediment. The remaining bays of the street facade are articulated by four Tuscan columns that define the short leg of an "L" shaped veranda that continues around the eastern side of the house, where four Tuscan columns define its width. The four columns that face the street support a shed roof; the colonnade facing east supports a horizontal cornice; and the eaves of the main gable serve as ceiling for the long leg of the veranda. The entire veranda is enclosed by a concrete guardrail supported by concrete baluster. The floors of the veranda are made of terrazo.

8. Statement of Significance

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

The 665 McKinley residence, was built in 1906, at the time Puerto Rico was entering a period of transition due to the island becoming a territory of the United States in 1898. A new system of government spread it's influence over all levels of its new possession. Architecture was no exception; new styles and new methods of construction were introduced to the island and gradually began to transform the face of the long-established "criollo" (Creole) vernacular architecture of the island.

The 665 McKinley residence embodies these times of transition. While certainly conforming to the main characteristics of the Spanish Creole type (raised wooden construction, "L" shaped plan, full-length veranda and hipped roof), it incorporates styles and materials of extraneous origins which radically change its traditional character. Instances of this area:

- 1. The traditional indistinctive facade, always lined by a continuous balcony with wooden railings and slender colonnades, is transformed by the introduction of Tuscan columns and a reinforced concrete baluster railing.
- 2. The ornamental articulation in Creole buildings which is minimal and limited to planar surround at each individual bay is kept on the exterior walls, but abandoned in the interior, in favor of an elaborate articulation of walls and ceilings, by the use of oak mouldings and beams. This is specially evident in the main living area: here the use of a screen supported on Poric columns and the elaborate and abundant use of decorative beams and mouldings brings to mind McKim, Mead and White's, Victor Newcomb House of 1880.
- 3. Door and windows, always very stark and utilitarian board-and-batten or louvered are now replaced by oak, glass paned doors with corresponding transom lights.

		House at		
Section number7	Page1	665 McKinley	San Juan,	PR

The west facade is divided into four bays by three sets of double sash casement windows and a side door to the kitchen. The side door is reached by a short flight of steps.

The interior arrangement is dominated by the living/dining area accessed from the veranda on two sides through glass panels double doors with corresponding transom lights. Flanking the living/dining area, at the opposite side of the veranda, are two bedrooms and the kitchen. The rear of the house originally enclosed another balcony that has been blocked up and used as a family room. (This alteration does not affect the property's integrity).

Oak was employed throughout the interior for flooring, string course, decorative columns, pilasters, beams, joists, and doors.

With the exception of the rear balcony, the house retains its original configuration and building materials. It has been impeccably maintained throughout the years.

-------------------------	-----------------------	--------------	--

However, a harmonious synthesis has not been achieved: the new elements and the old typology maintain their individual character without producing a new whole. This is clearly seen in the contrasting exterior facades: rustic finished in wood shiplap siding, with no ornamentation and, the interior living area: plaster finished, richly ornamented, and with excellent handwork.

Twenty years would have to pass for the emerging of a mature architecture combining the traditional and new. Nevertheless, the 665 McKinley residence is an excellent example of an architecture of transition. Rarely one can find such a well maintained and finely executed building of its kind.
