Continuation Sheet

Item Number(s)

It is known from the 1979 Mail Questionaire that this barn was originally built as a dairy barn. Though long out of use, cow stanchions still surround a feed trough which surrounds a central clay tile silo on the main floor. There are also a separator room and a calf holding room on the main floor, and a milk parlor is attached to the outside. The construction , in the early 20th century, of special function barns was an important experimental shift in the traditional use of the barn.

The Eckle Round Barn's true-round form, central silo, self-supporting single hip gambrel roof, and horizontal wood siding characterize it as an Illinois Agricultural Experiment Station / H.E. Crouch type. The influence of the Illinois Ag. Exp. Station may be seen in similar round barns throughout the midwest. The horizontal siding, while an expected characteristic, is uncommon for any lowa true-round barn.
