DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE

The Arlington Green Covered Bridge consists of a single span supported by two flanking timber Town lattice trusses. A tierod extends from each corner of the superstructure to the riverbank below it, and a guy cable has been strung from the west side to the north bank for reinforcement. The north end of the bridge rests on an abutment built of stone slabs which have been faced with concrete; the south abutment consists of stone slabs which have been mortared together. The bridge is 80 feet long and 17.5 feet wide, with a 14-foot roadway.

On the exterior, the large planks pegged together diagonally to form the trusses (and side walls) of the bridge are sheathed with flush boards hung vertically. Similar siding protects the ends of the trusses immediately inside the portals. The gables are sheathed with flush boards hung horizontally. All of the m siding is painted red. There are five small rectangular windows m in each side of the bridge. The roof is covered with asphalt shingles.
