CANYON CREEK Charcoal Kilns

These leather-stopped brick
ovens or "kils" were made
from 1891 to 1927. The charcoal
beds 3 miles west of here,
between 5 miles west of here.
Each kiln held 25 cords of
precisely stacked wood cut in
the mountains high above you.
In 1927, when the kilns reached
about 3 square miles of forest.

The four men working in
"takeing" a kiln used the
ground-level "takeing" kiln
until they couldn't reach the
top of the stack. Then they
finished the job using the
sugar kiln at the top. The
wood was then burned slowly
for two weeks.

At that point, the kilns
were opened and cooled a
usually added 1,750 bushels
of charcoal - enough to fit
a single smaller for 42 lbs.
By 1901, the silver and box
produced from the Hecla
Mining district totaled
\$22,000,000.
