DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Snowflake Stake Academy building is a three and a half story structure constructed of random ashlar rusticated sandstone. Rectangular in plan, the building measures 45 feet wide by 60 feet deep. It is surmounted with a low pitched hip roof with bell cast eaves and a single, centrally located gabled dormer on the front (east) slope. The original wood shingles on the roof surfaces have been replaced with asphalt shingles.

The building is situated on a sloping site with its front facade facing east. Because the site slopes from east to west, toward the rear of the building, the front entry is at the second level. The first level entrance is through a central round arch doorway on the north facade.

The front facade is distinguished by the central entry which is approached through a pedimented portico. The portico is supported by two stone piers and a pair of Ionic columns at the front, and two stone engaged piers at the wall. A single flight of steps flanked by low stone walls, gives access to the portico. Carved in the entablature of the pediment are the words "Stake Academy".

A round arch window opening flanks each side of the front entry. At the third level, three large rectangular window openings penetrate the wall plane in three equal sized bays separated by stone pilaster strips.

On the north and south facades, second and third story window openings are also rectangular and occur uniformly on the wall plane, three to a level. The window openings are set in three of four bays which are demarcated by stone pilaster strips.

Window openings have concrete lintels, and aluminum casement windows replace the original wood, multiple light double hung sash windows. This modification was made in 1969.

The rear, or west elevation consists of two rectangular window openings on the third level separated on the facade by a stone chimney breast. The chimney coninues upward and projects through the eave. A steel fire escape stair is attached to the wall and is accessible through the south window. Extending the length of this facade is a single story, shed roof addition. The wall planes are of rusticated stone and the roof is metal.

The interior has been modified considerably to accomodate the changing uses of the building.

STATEMENT OF SIGNIFICANCE

The Snowflake Stake Academy building is significant for both its architecture and its association with the educational development of Snowflake. The building exemplifies the culmination of the efforts of the Mormon Church to formalize religious culture and education in its colonies.

The Stake Academy at Snowflake was founded in 1888 when Wilford Woodruff, president of the LDS Church, ordered that all of the Stakes of the Church erect academies. Accordingly, academy classes in Snowflake were instituted and were held in an existing building, the Society Relief Hall, from 1889 until 1901. In that year the first permanent Stake Academy building was constructed. It was built of locally fired brick, but the two and a half story structure was completely destroyed by fire in 1910.

Construction of the second Stake Academy building on the same site was begun in 1911 and completed in November 1913. The building was designed by local builder and craftsman Ralph Ramsey. Ramsey, who was responsible for the design and construction of other buildings in Snowflake, including the Jesse N. Smith house (National Register 1971), was also noted as the wood carver of Eagle Gate which spans State Street in Salt Lake City, Utah.

The building was constructed of locally quarried red sandstone, thought to be more fire resistant than the fired brick of the first Academy building. The construction contract was let to Frank Willis, and the principal stone masons were Niels and Hans Hansen and Wilford Rogers.

The Stake Academy building was designed in the Neo Classical mode although some of the detailing conceived for the building, such as Ionic capitals at the pilaster strips, carved stone hood moulding above the first level round arch entry, and decorative urns on the portico, were never constructed.

The building continued to serve Academy functions until 1924 when the LDS Church discontinued support of secondary schools. The building was leased to the Union High School in 1925 and still continues as part of the existing high school complex.

Despite the alteration of the window openings in 1969, the exterior

of the building retains its original architectural integrity.

The Snowflake Stake Academy building is noteworthy for its architectural qualities and degree of craftsmanship. It serves as the singular evidence of early LDS Church attitudes toward public and private education in Snowflake, as well as being a prominent landmark in the community.
