DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Falls Mill is located in a picturesque setting along Factory Creek and amid a variety of trees. Being over one mile from the main highway, it escapes the noise of passing vehicles.

Shortly after 1800 a mill was built on this site, which was in the center of a cotton-growing region. This mill was destroyed by fire and the present building was constructed in 1873 by Robert Man and Ezariah David for the manufacture of woolen material and coarse cloth. The bricks for the sturdy and impressive three-story building were made on the premises. The exterior side walls of the recessed third floor are covered with wood siding. There are eleven windows on the front, seven on the back, and twenty one on the sides. A small frame room is built on the rear of the building next to the water wheel. The structural wooden timbers were put together with pegs.

The mill operated on a 24-hour per day basis with the entire labor force being women. On the second level the floor was worn completely through in some places by the constant pacing back and forth to operate the machines. The mill ceased operation in 1896 and was vacant until 1903 when a cotton gin began operation and continued until 1942. Six years later a wood products operation was attempted, but did not prove successful. The building remained unused until 1970. At this time, W. W. Crum, a retired Army officer who had worked at a mill which his father had owned, bought the mill. This ended a long search on his part to find an old mill which he could operate. He now owned a mill and water wheel for power, but no milling machinery. The 34-foot metal overshot wheel, one of the largest in operation anywhere, replaced a wooden one in 1907. The wheel creates 100 horsepower in its 3 revolutions per minute, furnishing power to the 42-inch grinding stones., These stones, made in France, were bought in Paint Rock Valley, Alabama, by Mr. Crum. He purchased most of the equipment necessary for the mill's operation - mixers, sifters, and elevators in the sale of the Old Boiling Fork Mill at Winchester. This mill. after 139 years of continuous grinding, was forced to cease operation because of the construction of Tims Ford Dam and Reservoir.

Falls Mill received its name from the beautiful falls on Factory Creek just above the mill, from which the water in the mill race turns the wheel.

United States Department of the Interior National Park Service

National Register of Historic Places Continuation Sheet

Section number 7 and 10 Page 2 Falls Mill

A dam and mill race associated with the mill were not mentioned in the original nomination. However, since the size and legal boundaries of the property tract have not been altered since the date of the nomination, the dam and mill race should have been included as a contributing resource. In addition, the boundaries were not specified. Although the nomination mentioned eight acres, the legal boundaries of the tract include 7-10 acres. (See map) on map 103 parcel 28.
