Describe the present and original (if known) physical appearance

This rectangular, frame building (49'x 22') is three bays wide and has a gable roof with front and rear gables. The building rests on cement blocks. The front facade has a full-width porch with wooden steps and a wooden deck. Its cypress chamfered posts support a corrugated tin shed roof with exposed rafter ends. These posts were salvaged from a local farmhouse and replaced the original, simple posts in the 1973 rehabilitation. Located in the porch area, in the central front bay is an entrance consisting of double doors of diagonal tongue and groove beaded boards and a three-light transom. This entrance is flanked by paired four-over-four double hung sash windows with vertical tongue and groove beaded board panelling beneath them. The rest of the windows are four-over-four double hung sash. The rear facade is marked by a single door flanked by windows. Each side facade has one window.

On the interior, the pine flooring runs the length of the building and the walls are sheathed with narrow, beaded panelling. The east side of the building was the general store and shelves still line the east wall. Counters and display cases are also located in this area. The newspaper's printing press and high shelves holding the printer's paraphernalia are in the western half of the building.

The building has had some minor alterations which do not significantly detract from its integrity. During its rehabilitation in 1973, the store was moved approximately 10 feet south of its original location. It also seems that the roofline has been altered In a 1903 photograph, and that the front porch is an early addition. the front facade has a false front with the peak of the gable extending slightly above the false front to give the appearance of a pedimented parapet. Today, the false front is gone and the building has a simple gable roof. This roof is sheathed in tin, but it is believed that the original wooden shakes are underneath this later The building rests on cement blocks, the original roofing material. wooden blocks having been replaced. Minor interior alterations include adapting the electric ceiling light sockets to ceiling fans with lights and converting the wood-burning, potbellied stove to the use of natural gas. Overall, the building is an amazingly intact example of a turn-of-the-century general store of vernacular form. The alterations and additions to this general store/newspaper office have not compromised its architectural integrity or historical significance.

important link to the town's past. Local citizens are striving to improve the quality of the museum and thus garner even more public support for it. The building's listing in the National Register is an important step towards achieving this goal.

Statement of Significance (in one paragraph)

The Watkins Museum is a significant example of a turn-of-the-century general store and newspaper office building of vernacular design. The building's high level of architectural integrity, combined with its contents, provides significant insights into rural life in early twentieth century Mississippi.

Taylorsville was an antebellum village located a few miles northeast of the present town's current site. Although the community prospered during Reconstruction, it was moved to its present site in 1900 in order to be on the railroad line. The "new" Taylorsville had been surveyed and platted by Wiley G. Moore in 1899 (Taylorsville, Mississippi, Subject File. Mississippi Department of Archives and History, Jackson and Taylorsville Quadrangle 7.5 Minutes Series Topographic Map).

The newspaper The Taylorsville Signal was established in January 1901 by Virgil Watkins who moved his enterprise into this building two years later. His father, James Thomas Watkins, assumed the editorship of the newspaper in 1905. Upon his death in 1930, Hattie and Mamie Watkins (James' daughters) took over the newspaper and ran it from this general store until 1966. In the late 1960's the building was abandoned. It was saved and rehabilitated into the Watkins Museum in 1973 (The Mississippi Historical Records Survey, Division of Community Service Programs, Work Projects Administration, Mississippi Newspapers, 1805-1940: A Preliminary Checklist... [Jackson, MS: 1942], p. 230; Lucy Kennedy interviewed by Susan M. Enzweiler, architectural historian with the Mississippi Department of Archives and History, Jackson, at Taylorsville, Miss., April 14, 1986 and no author cited, "James Thomas Watkins," The Taylorsville Signal June 26, 1930, p. 1).

Many of the town's wooden commercial buildings were destroyed by fires in the early twentieth century. This prompted the town board to pass an ordinance in 1922 requiring all new commercial buildings to be of fireproof construction. Of course, this law dramatically altered the town's appearance and brought to a close the first phase of Taylorsville's development (Taylorsville).

The Watkins Museum is the only extant commercial building remaining from this early phase of Taylorsville's growth. It is the second oldest building in the town. The oldest, a house, predates the establishment of the community and is not as closely linked to the town's history as the museum.

In summary, the Watkins Museum (formerly a general store and newspaper office) is the only remaining vestige of early Taylorsville as far as can be determined at this time. The building retains its architectural integrity and is respected by the community as an
