Charcoal for a smelter, active from 1885-1889 across the valley at Nicholia, was produced in 16 kilns. Discovered in 1881 the Viola mine became an important source for lead and silver from 1886-1888. Ore also was hauled from Gilmore to the Viola mine until 1889, when the hoisting works burned. Yow prices for lead and silver kept the smelter shut down after 1889, and charcoal production ceased.

Charcoal kilns were built for smelters in a number of Idaho mining areas of that time, but not very many are left. Most of the Viola kilns were hauled off for construction materials many years ago. These kilns are of special significance because the United States Forest Service has developed an interpretative program for the site.
