DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Reliance is a Chesapeake Bay skipjack built in 1904 at Fishing Creek, Maryland. She is a sloop-rigged sailing vessel presently used for dredging oysters in Maryland waters. She has a registered length of 41 feet and an over-all length of 60 feet. Her beam is 14 feet and her draft is 2.5 feet. Her dredge gear includes four pairs of dredges, dredge cables, and front and starboard dredge rollers; one set of winders; one four-cylinder winder motor; and one yawl boat with an eight cylinder motor. She has one suit of canyas sails. All running rigging is manila and all deck hardware is iron. Her deck layout includes a small cabin aft with three crude berths and a large hatch forward. This vessel is constructed of native Eastern Shore pine and all repairs have been made in the original style.

#### STATEMENT OF SIGNIFICANCE

The significance of the skipjack <u>Reliance</u> is shared as well by her twentynine sisters who make up the last fleet of working sailing vessels in North America.

The "skipjack" is the final stage in a development that began with the Indian dugout and ended with the internal combustion engine. During the 1890's, rising costs and dwindling oyster harvests forced Chesapeake watermen to seek a replacement for the large and expensive "bugeye." The lines for this replacement were taken directly from the flat bottomed crab skiff. Because it had a flat bottom and hard chines, the resulting boat could be built cheaply. The economy of construction and the working characteristics of the skipjack made it hugely successful for the short period of time before the gasoline engine was generally accepted in the Bay.

During the non-oystering months skipjacks were used to haul fresh produce, lumber, and livestock to markets in Baltimore and Washington.

Today there are thirty survivors in a fleet that once numbered in the thousands. These boats are still being used to dredge for oysters in the Maryland waters of the Chesapeake Bay from November to March.

Each year the size of Maryland's oyster fleet declines. The prevailing attitude among watermen is that in five or six years time working sails will disappear from the Bay and those remaining skipjacks will have their masts cropped. Most of a working skipjack's enemies are economic: declining pro fitability in the face of increased mechanization and higher yard costs. With outside help it may be possible to stem the economic problems and preserve the working sail.
