Describe present and historic physical appearance.

Historic Appearance

Early in the morning of May 24, 1883, Bandelier visited the cliff dwellings, known today as **Upper Ruin, Tonto National Monument** [AR U:8:048(ASM)], contained within Tonto National Monument Archeological District and listed on the National Register October 23, 1987. He recorded that "the caves are visible at a great distance". They are in a narrow canyon "where a spring rises, feeding a thicket of cottonwood and walnut trees...led the horses up to the spring, about 1/2 mile farther up the canon, south, and to the foot of the 2nd cave (Upper Ruin), which is about 400 feet high and steeper than the other. The slope is disintegrated slabs, and hardly any cactus or shrubbery... The ruin is larger... Both ruins are burnt out. This was done by the Apaches, who used to celebrate their dances in the ruins. So Mrs. McIntosh tells me. This ruin is mostly 2 stories high. The walls are of the same thickness. 0.30 (meters) is an average. - The material is the same. In both cases, the stones are well broken... The lintels of the doors are of wood, several stalks laid across... No door opens to the front, but there are little square or quadrilateral holes. The roof is overhanging, or rather projecting... rain cannot affect the interior of the cave.

Current Appearance

Owing to their protection as a National Monument, the Lower and Upper Ruins visited by Bandelier are essentially unchanged.

8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties:

nationally statewide locally

ADOLPH F. BANDELIER N/A

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Adolph Bandelier's 1883 archeological survey in Tonto Basin resulted in the identification and recording of sixteen 13th and 14th century Salado sites which represent the range of architectural and artifactual variability present in that cultural tradition. The Upper Ruin at Tonto National Monument is an example of the checkerboard property sub-type known as cliff dwellings.

Bandelier's exploration and documentation are historically important events in that they occurred at a significant period in the development of the science of archeology. Indeed, the 1880s has been referred to as the most important period in the development of southwestern archeological science; it was during this period that several principles were introduced, including the idea of archeological survey over large areas.

Adolph Bandelier was one of the men notable for introducing such principles and is regarded for the contribution he made to archeology. He began his comparative study of native peoples of the Southwest in the year 1880, exploring, "seeing everything, measuring everything, and...connecting everything he saw or heard with things he had read in literature" (Hammond and Goad 1949:7). As such, he is viewed as one of the first to take the study of American prehistory from mere curiosity and antiquarianism to the modern comparative science of archeology.
