NPS Form 10-900 (Oct. 1990)

United States Department of the Interior National Park Service

National Register of Historic Places Registration Form

RECEIVED

FFR 13 1995

INTERAGENCY RESOURCES (

This form is for use in nominating or requesting determinations for individual properties and districted to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

Paperwork Reduction Act Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C. 470 et seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P.O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reductions Projects (1024-0018), Washington, DC 20503.

7. Physical Description.

Completed in 1945, the concrete arch Jim Creek Bridge replaced an earlier bridge spanning Jim Creek and rugged Jim Creek Canyon on this lightly traveled portion of State Route 503. The present structure is 308 feet in length with the parabolic main span consisting of a 179-foot open spandrel rib-type reinforced concrete deck arch. The arch is composed of two ribs at 18 feet center-to-center that are connected by eight cross struts at approximately 20 feet on centers. The height of the arch from springline to crown in 43 feet. The height from the bottom of the creek bed to the top of the roadway is approximately 120 feet. The ribs vary in depth from 5 feet 3 inches at the springline to 3 feet at the crown and are 3 feet 6 inches in width. The spandrel columns are at 20-foot centers and support a parabolic T-beam superstructure having a 24foot roadway with two-foot curbs on each side. The approach spans are parabolic T-beams with spans of approximately 20 feet: two spans for the west approach and three spans for the east approach.

8. Statement of Significance.

The Jim Creek Bridge is eligible for inclusion in the National Register of Historic Places under Criteria A and C. The structure is significant as one of the few concrete arch bridges built during the 1941–1950 era. The high vault of its arch accentuates the precipitous gorge which it crosses, lending a sense of old-world enchantment to this remote setting. Situated in a mountainous forest environment, the graceful concrete arch bridge spanning Jim Creek is one of the most aesthetically pleasing concrete arch bridges built in the 1941–1950 era. The elegant structure is all the more remarkable because it was constructed during World War II (1944 and 1945) when bridge construction was substantially curtailed due to a severe shortages of construction manpower and availability of materials. Construction of the Jim Creek Bridge epitomized the ingenuity and resourcefulness of civilian agencies in completing substantial public works projects during a time of severe material shortages.

In September 1943, the Department of Highways purchased 430 tons of steel reinforcing bars from surplus stocks of war projects. The acquisition of these bars made possible the construction of a number of structures which otherwise could not have been built, one being the Jim Creek Bridge, erected with 82 tons of reinforcing steel from Department stock on hand. The Department's decision to commit nearly 20 percent of surplus stocks of critical materials purchased in 1943 for completion of the Jim Creek Bridge indicates that the structure was a priority project, most likely because of the role the bridge played in providing access to vital timber reserves for the war effort. The Jim Creek Bridge was one of two bridges (the other being the Johnson Creek Bridge on the same highway) awarded under contract number 2912. Contract price for the structures was approximately \$77,210. Burwell Bantz was the Director of Highways; the Bridge Engineer was R. W. Finke. The Contractor was Macri Brothers and Company.

The Jim Creek Bridge is appreciated by few travelers on this remote section of State Route 503 following the Lewis River southwest of Mount St. Helens. Yet the bridge nonetheless displays engineering and design details characteristic of more highly visible structures in urban settings.
