DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Hamilton House is a large almost-square two-and-one-half frame structure with clapboarded walls, a hipped and dormered roof, and four tall end chimneys built within the walls. The house is approximately 49 feet by 46 The north, east, and south elevations are each five-bays feet in size. wide and the west, three bays in width. The north, east, and south elevations have central doors topped by pediments and flanked by pilasters; the door on the north facade also has sidelights and a second pair of beaded flanking pilasters. Above the central doors in the north and east elevations are tall round-headed Palladian windows. First-story windows on all four facades have 18 lights and are topped by flat cornices; second-story windows contain 15 lights and are set up against the modillioned cornice that extends around the building. The north and south elevations each have three dormers and the east and west ends one dormer each. These dormers are crowned by alternating triangular and broken arch pediments.

The north door opens into a wide central hall that extends through the building and divides the four rooms on the first floor into pairs. The staircase is located against the east wall in the north portion of the hall and a short distance to the south, beyond the halfway point, a large arch spans the hall. The upper half of the walls are covered by wallpaper with classic Greco-Roman arches, which is a 1900 reproduction of original paper found in the house. The kitchen and dining room are located to the left, or east, of the hall and these rooms are separated by a lateral side hall that leads to the east entrance. On the left side of the hall is the north and south parlors. The two parlors and dining room have deep mahogany window seats and carved arches besides the fireplaces. The fireplace chimney breasts are paneled and the tall window interior shutters fold into the reveals; the doors have large brass locks. The wallpapers in the dining room and south parlor were painted by George Porter Fernald in 1900. The kitchen contains a very large fireplace with an oven.

The second story has a floor plan similar to the first, with a central hall and four large bedrooms. These rooms also have paneled chimney breasts, inside window shutters, window seats, and arched niches besides the chimneys. The third floor has five more chambers which served as servants' quarters.

Restored in 1950, Hamilton House is in good condition. The structure is open to visitors during the summer months as a furnished historic house exhibit.

Built in 1787-88 and still standing in its beautiful and undisturbed rural setting, Hamilton House is a magnificent and little-altered example of a large New England **frame Georgian country house**.

<u>History</u>

Colonel Jonathan Hamilton, a merchant of Portsmouth, New Hampshire, purchased this land at Pipe Stave Point on the Piscataqua River on January 13, 1783, and completed this large house in 1787-88. Hamilton House served as his residence until his death in 1802. The house stood vacant from 1815 until 1839 and in 1898 the residence and 110 acres of land were acquired by Mrs. Emily D. Tyson. The only structural changes to the house were made in 1900, when an original stairway leading from the east door was removed and the length of dining room was thereby extended, and two small latticed wings were built at the sides of the house. A door was also cut into the west wall of the north parlor to give the house four entrances instead of the original three.

In 1949, Mrs. Henry G. Vaughan, the daughter of Mrs. Tyson, willed Hamilton House and 50 acres of land, along with incomersfrom a trust fund, to the Society for the Preservation of New England Antiquities. The Society at once undertook to restore the mansion. In this work the two small added wing and the door in the west wall were eliminated, and the dining room was restored to its original length.
