Describe the present and original (if known) physical appearance

The Old Federal Building (1893) is a semi-monumental three-story brick structure located in downtown Opelousas. Although it has been enlarged once and renovated more than once, the exterior has maintained its original Romanesque Revival styling. Overall the building retains enough significant features to merit listing in the National Register.

The Old Federal Building has a complicated history. It began in 1893 as a two-story Romanesque Revival courthouse. Offices were downstairs and the courtroom and related spaces were upstairs. The courtroom was taller than the other rooms and was consequently set in its own raised pavilion. The building featured brick denticular cornices and an asymmetrical system of hip roofs. The lower story had segmentally arched windows and the upper story had round arch windows set in groups. In addition, the main entrance was articulated with a broad brick arch which had elaborately ornamented terra cotta spandrels. The spandrels had swirling naturalistic brincade and a pair of round panels which contained patriotic symbols (i.e., a great seal and a feathered eagle). The courtroom was the only noteworthy interior space. It had an extremely deep cove molded ceiling, a pair of ceiling medallions, and a triple set of arched windows in the front.

In 1932 the building was renovated and enlarged to provide for a larger courtroom and a post office downstairs. Although this was a substantial and all-encompassing renovation project, great care was taken to duplicate the original narrow, mortar brickwork and the original fenestration style in the new construction. As a result, the 1932 work is virtually indistinguishable from the 1893 work even to a trained observer.

In the course of the renovation, the following changes were made:

- (1) A three-story addition was built at the rear.
- (2) The courtroom was extended northward over an old side wing. The original interior and exterior details were duplicated in the enlarged courtroom.
- (3) New hip roofs were added to the original portions of the building. All roofs were treated with decoratively cut exposed rafter ends. Although this feature did not exist on the original building, it certainly was in keeping with the style of the late-nineteenth century.
- (4) The entire ground story was reworked to provide for a post office and for mail sorting space.
- (5) The chimneys were replaced.
- (6) New doors, doorways, and baseboards were installed throughout.
- (7) The side entrance on Landry Street was moved to the rear addition.

Item number 7

Page 2

7. Description (Continued)

In the 1960's the building was again renovated. Much of the lower story was gutted. In addition, the courtroom was treated with fiberboard ceiling tiles and the front windows were blocked up with concrete modular units. Finally, a rear loading dock was installed.

Assessment of Integrity:

Extant noteworthy Romanesque Revival features of the Old Federal Building include:

- (1) the finely crafted broad entrance arch with its cast cement foliated impost and elaborate terra cotta spandrel panels;
- (2) the string courses;
- (3) the round arch windows with brick hood molds;
- (4) the finely crafted Baltimore brickwork; and
- (5) the fenestration pattern.

The building's architectural significance is based upon these extant exterior features. Although the roofline features are not original, they contribute to the building's Romanesque Revival appearance. They do not detract from the Old Federal Building's standing as a work of architecture in the Romanesque Revival mode.

Statement of Significance (in one paragraph) Criterion C

The Old Federal Building in Opelousas is significant on the state level in the area of architecture because there are relatively few surviving Romanesque Revival buildings in Louisiana and it is a superior example of that style.

Firstly, the Old Federal Building is, within the context of Louisiana, an unusual surviving example of Romanesque Revival architecture. Like the rest of the country, Louisiana went through a stage in the late-nineteenth and early-twentieth centuries in which the Romanesque Revival style was in vogue for public and institutional buildings. The extent of the loss of building stock this created can be seen, for example, if one examines Louisiana's parish courthouses. At one time there were sixteen Romanesque Revival parish courthouses in Louisiana. Today there are four examples remaining.

Secondly, the Old Federal Building is superior among the surviving examples because of its superb terra cotta ornamentation. It should be noted in this regard that terra cotta ornamentation is seldom found on Louisiana's surviving Romanesque Revival structures. For example, none of the state's surviving parish courthouses has any terra cotta ornamentation of any kind.
