Describe present and historic physical appearance.

Ashford Academy is a 2 1/2-story clapboarded structure built about 1825 (Photograph 1). It faces south on Fitts Road and is separated from the main road, U.S. Route 44, by a small triangle of open land which was once the village green of Ashford Center. The nominated property is part of a larger town-owned parcel containing a bandstand and a cemetery dating back to the 18th century. In addition to the Academy building itself, the nominated property includes a deteriorated privy (Photograph 2) standing near the lot's northeast rear corner; the construction details of the western half -- wide reciprocally sawn boards and cut nails -- indicate it was built around the same time as the main building. Both are counted as contributing buildings.

The south gable end of the Academy, facing the road, is the principal elevation. It is three bays wide with a window between two entrances, each of which has a door of four recessed panels and is outlined by simple pilasters and a narrow molded cornice. Side elevations (Photographs 2 and 3) have three windows on the first story and four on the second; on the east elevation, small windows have been cut in to light washrooms located just inside the east entry. All window openings have board frames and are fitted with modern 12-over-12 sash, replacements for the 6-over-6 sash (probably dating from about 1850) shown in old photographs. The building's molded cornice forms a complete return across the gable, within which is a full-sized atticstory window. Except for the rear elevation (Photograph 3), all corners are finished with quoins (Photograph 4). Straddling the ridge wood-shingled roof, at the south end, is a hip-roofed belfry of the with rectangular louvered openings. Its simple paneled corner pilasters suggest it is a c.1850' replacement for the original open belfry with bell-curved dome shown in an old engraving (Photograph 5). The small bronze bell within is not marked. Emerging from the ridge at the rear of building is a small brick chimney.

The pilasters are a typical detail from the Greek Revival period (c.1840-1860).

Description (continued):

The interior is plainly detailed and largely intact, although the original plaster ceilings and much of the walls have been finished with gypsum board; the joists of the first-floor ceiling are exposed (Photograph 6). Within the entrances is a small hall or vestibule (Photograph 7), with the rest of the interior consisting of a single large classroom on each floor. A stairway along the west wall of the hall leads to the upper classroom (Photograph 8). Original interior fabric includes wide-board floors, plain window and door surrounds, a simple dado around the walls of the first-floor classroom, one fourpanel door, and beaded casings on structural members, some of which have been exposed. Furnishings include seats and school desks from the early 20th century. The building is presently used for storage.

Each half of the gable-roofed, clapboarded privy (Photograph 2) contains a bank of three lidded seats. The eastern half of the privy appears to have been added about 1900. The doors and much of the roof of the privy are missing, and as a result it is extremely decayed.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above. Ashford Academy is significant as one of the community's landmark buildings and as an example of a rural academy, an important development in the educational history of Connecticut (Criterion A). Built about 1825, the Academy stands on what was once a village green serving as the town's center. Originally there were taverns and a Congregational church nearby (Photograph 5), but today only the Academy and a cemetery remain to suggest the former importance of the site. With its two-story height, belfry, and prominent quoins, the Academy is among the town's most striking historic buildings; it also appears to be the oldest public building in town and one of few old Ashford schools not substantially altered for other uses. Architecturally, the Academy embodies the distinctive characteristics of country Federal-style architecture (Criterion C). Although extremely simple, the building's details, particularly the quoins, entrance pilasters, and full cornice return, illustrate typically Federal interpretations of Georgian and Classical precedents. Despite some later modifications, the building retains its historical appearance and much of its original materials.

Historic Context

Beginning in the 1790s, people in Connecticut (and throughout America) perceived the need for greater educational opportunities than could be had in rural district schools, which typically limited themselves to teaching basic reading and calculation. The only advanced instruction previously available was tutoring in the classics from clergymen or other educated townspeople. But in the early years of the 19th century, academies were founded throughout the state, usually with a combination of public support and private subscription, to teach older children literature, science, classics, and other higher subjects. Although preparation for college was one function of the academies, it is clear from the numbers of students (often both boys and girls) that general enrichment was also an important goal. After the Civil War, small-town academies atrophied, reflecting the economic decline of rural Connecticut society. To some extent, their role was

Statement of Significance (continued):

assumed by high schools, which by the third quarter of the 19th century were in operation in many larger towns and were available to nearby rural areas. In fact, many of the state's surviving academy buildings are part of institutions which became their town's high schools. Ashford Academy is an important representative of the development of rural academies because relatively few of its type have survived, and even more rarely, the building retains its original form, proportions, and architectural integrity.

Ashford Academy was founded about 1825 when a group of citizens raised funds toward adding a second story to a schoolhouse then under construction in the town's Fifth School District. Shares in the academy association were offered at \$25.00, later reduced to \$10.00. Only one teacher was hired per term, and some years there were no academy classes at all. The last academy session was held in 1875, though the building continued in use as a district school until 1949.

Quoins, pilasters, and formal cornices were extremely uncommon for public schools of the period, which were usually entirely utilitarian in appearance. While simple compared with the ornament on Ashford's large Federal-period houses, the Academy's architectural details indicate the building's exceptional educational purpose.

The deteriorated privy represents a humble yet significant part of the site: very few original outhouses for institutional buildings of this age are known.
