### DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Although the first Fort Hancock Life-Saving Station was built in 1848, the present building dates from 1894. Built about 1,000 feet from the 1848 site, the shingle style building is a 1-and-1/2-story office section, with a 2-bay boathouse on one end and a 4-story tower on the front with a pyramid roof (facing the sea). The second story of the tower is connected to the pitched roof of the office section by an enlarged dormer form whose walls are flush with the sides of the tower. The boathouse has a shallow pitched roof and a pair of double doors facing the sea.

The fourth floor of the tower has a cantilevered balcony on all four sides which is supported on framing principals. The office section has a central chimney, a jerkin head gable with an entrance door which is reached by means of an exterior stair of two colinear flights with a landing between. There is also a bent dormer on each side and a front porch which encloses the base of the tower.

The porch was closed in in the 1930s with weather boards and the main entrance was placed there.

Excluding the porch the entire building is shingled. The windows are chiefly pairs of 1-over-1 sash type, with 1-pane casement windows set into the tower. The railings on the balcony and exterior stair and the framing principals are cleanly articulated with simple rectangular balusters and struts. This together with their date (c. 1914) suggests a strong craftsman influence. There is also a 40-foot mast stepped on the balcony.

The structure is located east of Hartshorne Drive on a sandy knoll which overlooks the Atlantic Ocean. When constructed in 1894, the life-saving station stood over 800 yards from the ocean. Beach erosion, however, has reduced that distance to 150 feet.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The Spermaceti Cove No. 2 Life-Saving Service Station is significant because of its association with the earliest Federally sponsored efforts to save life and property from coastal shipwrecks. The station was built in 1894,<sup>1</sup> and up until 1949,<sup>2</sup> the U.S. Life-Saving Service (USLSS) conducted rescue missions from this building. The U.S.L.S.S. was the parent organization of the U.S. Coast Guard which was founded in 1915.<sup>3</sup>

Spermaceti Cove was one of six (or eight)<sup>4</sup> original U.S.L.S.S. New Jersey coastal sites. The first U.S.L.S.S. station on this location was erected in May of 1849<sup>5</sup> on land controlled by the War Department. In 1894<sup>6</sup> the present structure was built about 1,000 feet from the old station site.

The long tradition of heroic rescue efforts at Sandy Hook's Spermaceti Cove ended in 1949 when the 1894 station was decommissioned as an active U.S. Coast Guard Station. By 1962<sup>7</sup> it housed administrative offices for a New Jersey State Park. Since 1974<sup>8</sup> it has served as a visitors' center for the Gateway National Recreation Area.

The U.S. Life Saving Stations of 1855, 1872, and 1891<sup>9</sup> built to the north of Spermaceti Cove have all disappeared. Relatively unaltered, the 1894 Spermaceti Cove No. 1 Life-Saving Station is an important example of late-19th-century New Jersey coastal utilitarian architecture.
