Fire Station #25 is a two story brick building with basement, built in 1908 and 1909 as a major fire station. It has four terraced bays on street level and living guarters above. A hose tower is on the north side. It is shaped like an inverted "L", the short arm of the letter being a single long bay.

The building is in good structural condition. The brick work needs pointing and in some areas, particularly the hose tower, the bricks are flaking off. The city architects' office says that some arches are cracked. However, the building has been the subject of recent planning. It has been suggested that it be converted into a neighborhood service center and inside-outside cafe. During the summer of 1970 it was used by a Youth Corps Group.

The fire station is essentially the same in appearance now as when it was built, although wrought iron decorations appearing on the architect's plans are not on the building. It is not known if they were ever installed. Most windows and bay doors are arched. The interior is austere and totally free from decoration although there is some carving on the stairway newel posts. Internal changes were made after the conversion from horse-drawn equipment to motorized, but the original design is quite evident. The second floor remains virtually unaltered.

The first floor of the station, with its several levels still shows some of the design for horse drawn equipment. The original details are noted in the statement of significance. After World War I, or around that time, the iron grates in the horse stalls were removed and the holes cemented up. Workers dismantled the stalls and the barn. In the old area they built truck spaces, sommissary lockers, lounging room, and a watch office with a built-in folding bed. Part of the long bay was converted into a handball court.

Upstairs were a dormitory, locker room, wash room, recreation area, and office space. Brass poles led from the sleeping quarters to the equipment below. The southern bay, built to accommodate the long ladder rig, had two poles, each set into the wall. The two column-like features on the outside of the south wall are actually the outside of the shafts required to allow a man passage down the pole.

Fire Station #25 is significant in that it was one of the "new" series of brick fire stations built shortly after the turn of the century to replace the wooden stations that had been built after the fire of 1889. It was the change from horse-drawn equipment to motorized fire fighting gear; and the passage of one period to another has left its mark on the building. It is also a fine example of an architecture that combined function with good design.

Designed in 1908 by the architectural firm of Sommerville and Coe, and built in 1909, the station was immediately the subject of some dispute. It was built on a hill and to compensate for the slope, the station floor was terraced. (a feature unique to the west coast, as far as can be determined, and possible to a wider area) The four bays for fire equipment were built like stairs, each about two feet above the other. Fireman complained that this drop could lead to accidents when they rushed to their wagons. To reduce this possibility, the designer provided each level with its own brass pole from the dormitory above. For further safety, guard rails were installed along the edge.

The building strongly reflects the horse drawn fire equipment of the past. The department blacksmith shops were here. A horse ramp still leads from the alley into the building and along the rear of the old stalls. Each equipment bay had three stalls for horses. The horses stood on an iron grate which opened over the manure cellar below. Galvanized metal sheeting protected the stable framework from gnawing horses and it still remains in some places. Each stall had a pair of double doors in the front with polished wire windows. When the alarm rang from the big brass gong, the doors opended automatically and the horses trotted out to the equipment. A barn and hayloft occupied the back of the station and the high sliding door to the loft is still in the back wall, although the loft itself has been removed. A washing platform for horses is also still visible. To ensure ready pressure in the horse drawn pumper, a steam line led from the basement and could be coupled to the apparatus.

Although the station was built for horse drawn equipment, it also was the home of the Department's first motor vehicle. But by World War I the last of the horse wagons were gone. Modifications were made to erradicate some of the evidences of the horse era, and to better use some of the large spaces. By 1970, the station was no longer adequate for modern equipment, but the building survives, holding memories of two eras of fire fighting.
