## Significance

(Indicate sources of information for all statements)

20. Architectural significance

a. Key structure/individually may qualify for the National Register

b. Contributing structure

- C. Not eligible/intrusion
- N/A

Cicualr interior. 16 - sided with diameter 70'. Central cement silo with 13' diameter. Gambrel, 16 - section roof. Stone foundation. Metal foof. Used for dairying 1958 - 1968, then pigs and feeder cattle.

21. Historical Significance

Theme(s) Common Variation; Polygonal type.

- a. Key structure individually may qualify for the National Register
- b. Contributing structure
- C. Not eligible/intrusion

The most common of the common variations of the round barn built in lowa was the polygonal barn of 6 to 16 equal sides. Barns of this type dating from the peak years for construction of round barns, 1910-1920, are generally modeled after the true-round Illinois Agricultural Experiment Station / H.E. Crouch prototypes. Characteristic of the polygonal type, this sixteen-sided example has a central silo and self-supporting single hip gambrel roof of sixteen equal sections. This barn's heavy timber construction with interlocking joints is an exception to the ideal.
