United States Department of the Interior  
National Park ServiceNational Register of Historic Places  
Continuation SheetSection number 7 Page 1**Summary**

The Attwood-Hopson House is a one-and-a-half story wood-frame residence that was originally constructed c. 1890 in the Queen Anne style, but was converted to its current appearance in 1917 to reflect the Craftsman style of architecture then in vogue. The interior remains largely in its c. 1890 state. A c. 1890 associated well house is also included in the nomination. Located north of State Highway 8 in New Edinburg, the Attwood-Hopson House is in excellent condition.

**Elaboration**

The Attwood-Hopson House is a one-and-a-half story wood-frame residence that was originally constructed c. 1890 in an exuberant interpretation of the Queen Anne Free Classic Style. In 1917, however, it was radically remodeled to its current Craftsman appearance in order to reflect the latest architectural style. A continuous foundation composed of the original brick piers and a cast-concrete porch floor that was poured in 1917 supports the rectangular-plan structure. The exterior walls are clad with simple-drop novelty siding, and the composition-shingled roof is of a gable-on-hip design with a shed-roof dormer on each elevation. In addition, the roofline is continued, with a break, on three elevations to form the wrap-around porch, thus creating a dual-pitched hipped roof and a vaguely French Colonial-style effect. On both the dormers and the main roofline, exposed rafter tails are employed to enhance the Craftsman effect. Although originally (c.1890) containing at least three, and probably four, brick chimneys, none are now extant.

The wrap-around porch begins on the front, or southwestern, elevation and is supported by five simple box columns on this side. Underneath, the facade is symmetrically arranged with a central entrance composed of a half-glazed single-leaf door with matching half-glazed sidelights. A pair of two-over-two double-hung windows is located to either side of this entrance. The dormers are identically constructed and differ only in fenestration. While the two side elevation dormers feature five juxtaposed four-over-one double-hung windows, the two end elevations contain four of the four-over-four windows. Otherwise, only a small bracket is used on each end of the dormer for ornamentation.

Continuing around to the long southeastern elevation, the wrap-around porch requires six additional columns in addition to the shared corner column. It is similarly configured with a central entrance that features a half-glazed, nine-pane door that is flanked by half-glazed sidelights with a three-pane transom. To the southwest there are two two-over-two double-hung windows, while the wall to the northeast contains an additional single-leaf entrance and

**United States Department of the Interior  
National Park Service**

**National Register of Historic Places  
Continuation Sheet**

Section number 7 Page 2

---

a familiar two-over-two window.

The rear, or northeastern, elevation contains yet another central entrance that is identical to the one on the southeastern elevation, but is fenestrated like the front elevation with flanking pairs of two-over-two windows. In addition to the shared corner porch column, there is one more box column, and three of the c.1890 Tuscan columns resting upon brick piers. A later shed roof extends from the wrap-around section to form a carport.

The northwestern elevation, which does not have the wrap-around porch, is symmetrically arranged and features a small, below-the-roofline, shed-roof porch in the center of the elevation that is supported by two box columns. Underneath, a half-glazed, single-leaf door with transom only is situated between two two-over-two windows. Four more identical windows complete the fenestration on this elevation.

Colonial Revival-style detailing is found in the interior and is most prominently displayed on two mantelpieces. The living room piece is more ornate and features a two-tiered design with two Tuscan columns on the lower half and two Ionic columns (non-fluted) flanking the upper mirror. The bedroom mantel also contains an upper mirror, which is oval as opposed to rectangular, but less detailed with only two narrower Tuscan columns for both sections. Otherwise, there are French doors and a stairway consisting of a square newel post and turned balusters. The door and window moldings are of the familiar, projecting-crown type. The Attwood-Hopson House also has the distinction of being the first residence in New Edinburg to be wired for electricity when constructed. Power was provided by an exterior Delco house.

A c. 1890 well house is also included in the nomination. Located across from the southeastern elevation's central entrance, the lattice and frame well house is covered by a composition-shingled, gable-on-hip roof and features an arched entrance (with conventional door) facing the northwest (toward the house). The well house's historic integrity is documented in a picture taken shortly after construction of the main house. Only the original roof cresting and wood shingles are missing.

Located north of State Highway 8 in New Edinburg, the Attwood-Hopson House is currently owned by Jack and Lisa Hopson and is in excellent condition.

**United States Department of the Interior  
National Park Service**

**National Register of Historic Places  
Continuation Sheet**

Section number 8 Page 1

---

**Summary**

The Attwood-Hopson House is being nominated under Criterion C with local significance as as an unusual interpretation of the Craftsman style of architecture.

**Elaboration**

Cleveland County was created on April 17, 1873, though it was first named Dorsey County in honor of Stephen W. Dorsey, a United States Senator from Arkansas at the time. Dorsey, however, lost favor with the Arkansas populace, and in 1885, the name was changed to Cleveland in honor of the just-elected president.

When the first courthouse at Toledo burned in 1889, New Edinburg, which had a population of 200, was in the running to receive the county seat along with Rison, Kingsland, and Beasley's Switch. After the first election failed to net a majority for any of the towns, a second election was held with Rison winning by a small margin.

At about this time, W. D. Attwood erected his splendid Queen Anne Free Classic-style residence in New Edinburg. Attwood was an early merchant in town and built the first brick store, the Attwood Mercantile Store, which was adjacent to his house and now replaced by a newer building. In 1917, the house was converted to its current appearance under the tutelage of the builder, Emmett Moseley. It is understood that the occupants were merely trying to stay abreast of current architectural fashion.

Due to its conversion from an earlier building form, the Attwood-Hopson House is an unusual representative of the Craftsman era in Arkansas and a prominent example of this style in New Edinburg. For these reasons, it is being nominated under Criterion C with local significance.
