4. STATE/FEDERAL AGENCY CERTIFICATION

As the designated authority under the National Historic Preservation Act of 1966, as amended, I hereby certify that this ___ nomination ___ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property ___ meets ___ does not meet the National Register Criteria.

Signature of Certifying Official

Date

State or Federal Agency and Bureau

In my opinion, the property ___ meets ___ does not meet the National Register criteria.

Signature of Commenting or Other Official

Date

State or Federal Agency and Bureau

5. NATIONAL PARK SERVICE CERTIFICATION

I hereby certify that this property is:

- Entered in the National Register
- Determined eligible for the National Register
- Determined not eligible for the National Register
- Removed from the National Register
- Other (explain): _____

Signature of Keeper

Date of Action

WESLEYAN GROVE (Martha's Vineyard Camp Meeting Association Campground)

6. FUNCTION OR USE

National Register of Historic Places Registration Form

Describe Present and Historic Physical Appearance.

The Martha's Vineyard Camp Meeting Association (MVCMA) is a religiously oriented summer community of 312 cottages, five Association buildings (Tabernacle, Administration Building, Museum, Tabernacle House, Maintenance Building), two buildings presently owned by the Trinity Methodist Church (Trinity Methodist Church and Grace Chapel), and six commercial buildings. Today the MVCMA grounds consist of a well-maintained 34-acre parcel of land located in Oak Bluffs, Massachusetts, on the island of Martha's Vineyard close to Nantucket Sound. The grounds are arranged in a pattern of multiple radials with the Tabernacle located in a large central circle (Trinity Circle) that has paths or roadways radiating from it leading to smaller circles and parks. Some of these smaller circles and parks are surrounded by larger concentric circles, with small paths radiating from them and leading to other circles or parks as drawn in the Pease and Mullin map of 1873. Each circle and park is bordered by quaint Victorian-style cottages. The boundaries of the campground are clearly defined; separating it from the surrounding commercial and residential neighborhoods even today. When one enters the grounds it is like entering another world and another time. The area, with its peace and tranquility and colorful cottages huddled together on small lots that are still heavily populated by oaks and other foliage, stands apart from the adjacent commercial area of Oak Bluffs with its hustle and bustle, as well as the more normally spaced later resort, with its more normative-sized cottages on larger individual lots.

The MVCMA, originally called Wesleyan Grove, began on a modest scale. The original half-acre site was selected by Jeremiah Pease, a leading Edgartown citizen, in 1835 as a place to hold a regional camp meeting. The site was located in a large grove of oaks close to a freshwater lake, in what was then the northern reaches of Edgartown township. Bordering the grove was the open land of a sheep pasture where blackberry vines, huckleberry and bayberry bushes, beach plums and sumac grew. There were thickets of scrub oaks, occasional pines and cedars, here and there a wild cherry tree, and in open spaces wild grass that turned to a red in the fall. Beyond the lake the land sloped gently into a white beach. On either side of the beach the shore line rose into bluffs where patches of turf overhung the beach and one could look over Vineyard Sound.

The growth and development of Wesleyan Grove was rapid. By 1859, when it was one of the largest and best-known permanent camp meeting sites in the country, a wide avenue surrounded the preacher's stand, benches, and the forty or so society or church tents. Beyond the avenue lay a larger circle with intersecting lanes of, perhaps, 400 family tents and a few tentative simple wooden cottages. In 1860 a group of ministers and laymen formed an association that, four years later, purchased twenty-six acres of land. Two years later they bought an additional ten. The method of the grounds layout was an additive one of discrete neighborhood units, each built around small, variously-shaped parks spinning out in a seemingly haphazard fashion from the main circle with its sanctified center. The meeting had grown from nine society or church tents in 1835 to over 500 tents and cottages by 1865, with twenty thousand people attending the Sabbath.

The Martha's Vineyard campground cottages are two stories high with widths that vary from around 11 to 16 feet, the height set proportionally so that larger and smaller cottages read as if the larger ones grew from small versions. The height to the gable peak is always twice the cottage width and the peak is always a ninety-degree angle. There must have been carpenters' rules of thumb to guide construction. The cottage roofs were constructed of two-by-four rafters, without purlins or ridgepoles, covered with horizontally laid boards and then wooden shingles. Each cottage has a centered double door flanked by lancet windows in the same style -- Romanesque or Gothic. The door's round or ogive arch, however, is flattened to allow it to fit under the second-floor balcony that is cantilevered over the entrance. The balcony and the gable sport two different patterns of jig-saw decoration. A small, tight pattern hangs from the balcony, and a larger and often more flamboyant one hangs from the eaves. A second double door on the upper story opens onto the balcony. Because of the gable, there is room for a full round or ogive arch on the balcony doors, allowing them to be read as large windows

WESLEYAN GROVE (Martha's Vineyard Camp Meeting Association Campground)**Page 5**

United States Department of the Interior, National Park Service

National Register of Historic Places Registration Form

because their shapes are the same as those of the little lancet windows below rather than the first-floor doors. This creates an odd juxtaposition of scales -- unusually small windows below, but an unusually large one above -- that is unique to these cottages and that serves the institution's religious purposes. By foiling the viewers' expectations, the cottages strange scale, along with their tight grouping on tent lots and their lack of private outdoor space, suggests an otherworldly community that miniaturizes and, perhaps, parodies the normative. The cottages and the grounds together support camp meeting beliefs that many individual conversions lead to broad social transformations. It is a utopian environment. The unique architectural and spatial configurations open visitors to religious suggestion by transporting them into a "fairylane," as it was so often termed, where all things seem possible. The magic is still there, as the MVCMA's many visitors attest.

The structure of the Martha's Vineyard campground cottages is as specific to the building type as the exterior forms. They were framed with six light pine posts, three on each side, which were braced during construction with long diagonal boards that cut through the rooms. Most cottages have no bracing within the frame itself, as can be seen from inside. The completed frames were then enclosed in a tight skin of random-width, tongue-and-groove vertical boarding that, acting as a shear wall, replaced the temporary bracing as a rigidifier. After enclosure, openings were cut into the board skin, the cut-outs then battened to serve as shutters for off-season closure. The single layer of boards can still be seen from both inside and out in the many cottages that have not been modified. Other cottages are now shingled for additional weather protection. Some owners have built up insulated walls from the interior or the exterior to make them habitable during the winter.

The feature of the cottages that contributes most directly to their popular appeal, lending a tone of sweetness to what would otherwise be a solemn scheme, is the jigsaw trim, especially the vergeboard. The gingerbread is varied, robust, ebullient, yet delicate, with pendants of inverted flame motifs or chains of loops or circles and a variety of drops, all offering a rich visual display to the pedestrian explorer. The patterns seem to be unique to this site although future studies may find them in pattern books or at other locations.

Generally, there were two rooms on the ground floor of each cottage, the one in front serving as a parlor. The back room was usually separated from the front room by curtains. In the back room was a narrow stairway leading to the sleeping quarters on the second floor. Furniture could be moved to the second floor by being hoisted onto the cantilevered balcony, and entered through the double doors of the front upstairs bedroom.

During the last decades of the nineteenth century, most of the cottages gained roofed front porches offering more protection than the forward-projecting tent platforms of the 1860s and 1870s. Sitting in front to see and be seen was then and remains today an important activity. One cottage (30 Allen Avenue) has no front porch, two cottages (24 Butler Avenue, 12 Commonwealth Avenue) have added roofed side porches and one cottage (16 Siloam Avenue) has no roofed porches; all four stand today as clear-examples of the original cottage form.

All cottages have acquired various small additions to accommodate kitchens and bathrooms, and some have gained dormers and other extensions on the upper floors. But the overall cottage shapes with the Romanesque and Gothic openings, the 90-degree gables, and the rich variety of jigsaw trim still dominate these ad hoc accumulations, leaving the historic fabric tantalizingly visible. Most additions are also old and add textures that are appropriate in scale and character and, it could even be argued, enrich the scene as modest gestures of continuous habitation.

While most of the cottages have either Romanesque or Gothic window and door shapes, there are variants that prove that, even if there were rules of thumb among carpenters or informal agreements between cottage owners

WESLEYAN GROVE (Martha's Vineyard Camp Meeting Association Campground)**Page 6**

United States Department of the Interior, National Park Service

National Register of Historic Places Registration Form

and their neighbors or the Association, non-conforming designs were also welcome. So many of the standard type have straight lintels or other tops to the doors and windows, rather than medievalizing arches, that they could constitute another style, albeit a less-noticeable one. A cottage type that is associated with New York inhabitants is distinguished by particularly robust round-arch moldings that is significantly different from the usual Romanesque versions. These cottages also had bracketed eaves, rather than vergeboards, and two lancet windows flanking the second-level double doors that open onto the balcony. Two examples of these can be found at 2 Clinton Avenue and at 10 Clinton Avenue. Several, dubbed "Flame" by modern observers for a unique jigsaw style, make a virtuoso display of tongue-and-groove rigidity: the ground floor front corners make the ninety-degree turn in two or three stages or shifts in wall direction. The posts that should be at those corners are omitted so that the folded wall (which is laced with small windows!) is doing the work (1 Cottage Park). Attempts to assign particular carpenters to these groups as well as to various normative types have failed. Two cottages at 7 and 15 Cottage Park, and one at 6 Fisk Avenue -- to which we can assign off-island carpenter's names -- have mansard rather than gable roofs. Two cottages built by the Tabernacle designer, John W. Hoyt, are hipped-roofed, with one- or two-story square plans rather than the rectangular plan, front-gable standard versions. One is located at 39 Butler Avenue. The second, located at 18 Trinity Circle, has a clerestory similar to the lower one on the Tabernacle lighting an interior living room. Several cottages once had mansard-roofed three-story towers. Except for the dramatic Crystal Place, which has been moved to Oak Bluffs, these are gone. One of the two three-story tower/cottages, appropriately named "Tall Timbers," (35 Allen Avenue) remains. There are also three one-story cottages (8 Vincent Park, 30 Victorian Park, 3 Butler Avenue) that are more like wooden tents than the fully developed Martha's Vineyard Campground Cottages. All of these exceptional types are constructed on a light frame, without studs, enclosed by a single layer of vertical tongue-and-groove boarding, as are the normative Romanesque and Gothic cottages.

Standing at the heart of the MVCMA grounds, the Tabernacle shelters the original consecrated preaching area of 1835 and has been the hub of religious and cultural activities on Martha's Vineyard for well over a century. The Tabernacle is a "place within a place." Viewed from the inside, the building exhibits a characteristic of great architecture. It creates a sense of place, a sense of otherness, which is clearly ordered by a different mood; a different spiritual intention from the outer world. Its cavernous space, laced by the delicate web of thin supports, is comparatively dark, but also transformed by the light coming through colored glass. Viewed from the outside, it offers visual metaphors of the tent it replaced, of an alighting bird and, as a special though unintended treat for the twenty-first century, a friendly, hovering spacecraft. The roofs, as seen in elevation, are at angles that shift slightly, the lowest one being the steepest, suggesting to modern eyes something like a stop motion photograph of the beating wings of a bird.

Another aspect of the Tabernacle's enduring appeal is the economy and sheer intelligence of the structure as a building solution. Most of the prefabricated iron members fan out from four principal supports without any circumferential metal connections beyond the squares they define. The structural core of the Tabernacle consists of these four major iron supports, placed about 40 feet from each other and forming a square upper roof. These vertical supports are actually trusses, the upper ends arching in toward each other and meeting at the center, about 75 feet above the floor. These vertical trusses are fixed rigidly at the level of the upper clerestory by four horizontal trusses; these are lying on edge, parallel with and just behind the windows, almost invisible against the light. The horizontal trusses make a square in plan and are the only circumferential metal members attached to each other, metal to metal, in the building. This feature made construction easier since the parts, machined in Philadelphia and Springfield, Massachusetts, could be assembled on the uneven ground without retooling the metal on site.

The top roof is low-hipped, square in plan, and has a wooden cupola that tops out at 100 feet above grade. The lower roofs have progressively rounded corners, so that the building appears nearly circular at base. The three

WESLEYAN GROVE (Martha's Vineyard Camp Meeting Association Campground)**Page 7**

United States Department of the Interior, National Park Service

National Register of Historic Places Registration Form

tiers of great hovering roofs, plus the cupola, float above a nearly circular space that is about 130 feet in diameter supported only by a minimal web of angle irons, T-irons, and pipes, most of which are only two or three inches at their widest dimension. Visible support for the great roofs is a web of fine wrought-iron arches above the thin point supports except for the area where the wooden stage wall appears to provide more substantial underpinnings.

The radiating metal-to-metal structure extending under the two lower roofs consists of delicate arches of 2 ½-inch by 2 ½-inch T-sections that support radiating or longitudinal iron rafters that in turn support circumferential wooden purlins. Five arches fan out from each of the four vertical trusses, coming to the ground in a total of 20 supports. From these 20 posts, the arching motion starts again, this time with 2-inch by 2-inch T-section arches ending at 20 more supports at the perimeter. There are also 12 extra iron supports grouped about the three entrances, their iron connectors going directly to the horizontal trusses, rather than to the four vertical supports. The connectors are not arches but, rather, iron beams and tension rods. The secondary and tertiary vertical supports consist of bunches of standard pieces. The secondary supports are made of four interlocked T-sections, the tertiary supports, two T-sections, and two 2-inch pipes. All posts vary in height to accommodate the uneven slope of the preaching area. This design makes the roofline, as seen from the outside, level rather than parallel to the ground, and reinforces the illusion that the roofs are like an animate being, mobile and independent of the site.

The thoughtfulness with which the visual quality of the Tabernacle is integrated with its structural and constructional determinants can be illustrated with an interior detail. The lowest roof is encircled at outer and inner edges by thin iron arches spanning the bays between the vertical supports. These arches are actually brackets, overlapping at the seeming crown in some places or not meeting at all, depending on whether they are crossing a wide or narrow bay. This variation in bay size is another key to the flexibility of the building that was necessary because it was erected on unpredictably uneven grounds. The iron building really works as a flexible building machine because it is, essentially, wood-jointed. The metal brackets attach to wooden plates on purlins. Thus a place where the irregularity of the building might be most apparent, near eye level, is masked by a device of decorative as well as structural use, giving a lifting effect of lightness and grace, much like the nonstructural arch at the base of the Eiffel Tower in Paris, built 10 years later.

The roofs, originally corrugated iron and now a corrugated asbestos material that retains the original texture, are separated from each other by two bands of clerestory windows. There are 48 windows in each clerestory, with the lower windows set horizontally between the lower and intermediate roofs and the upper windows set vertically between the intermediate and upper roofs. All of the windows consist of two clear center panes surrounded by yellow/brown panes on the sides and ends with either blue or red panes in the corners.

There are marked entrances on the north and south sides with arched openings and gabled roofs. The main entrance on the east side, opposite the stage, is in the form of a short tower with a large semicircular stained glass window set above the entrance. This tower was added in 1901 when the first major repair or "restoration" was undertaken. The side walls of the tower and the side entrances, as well as the outside wall behind the stage, are covered with metal ornamental shingles, which were also added at the time of the 1901 restoration.

While the multitude of Martha's Vineyard Campground Cottages and the Tabernacle, are the most important campground buildings in terms of the history of American architecture, there are a number of more normative but well-preserved historic buildings left from the heyday of campground expansion. In 1859 the emerging MVCMA constructed a two-and-a-half-story headquarters building (80 Trinity Park) that continues to be used for its original purpose. The need for a baggage room, post office, lantern and oil room, and tent-storage space has fallen away, but there are still meeting rooms, offices, and lodging for some staff in the Association

WESLEYAN GROVE (Martha's Vineyard Camp Meeting Association Campground)**Page 8**

United States Department of the Interior, National Park Service

National Register of Historic Places Registration Form

building's well-preserved interior. In 1878 the Association built Trinity Methodist Church (38 Trinity Park), displacing some of the old society or church tents inside the main circle. In 1885, it built Grace Chapel, now known as the Parish House, (40 Trinity Circle) for the women who managed various church activities. While the Parish House could benefit from a renovation that would reveal its historic features, the church has recently had the benefit of just that. Trinity Methodist Church is a towered, stick-style/Queen Anne structure of some distinction. Edward M. Hyde, a Methodist minister who had trained in architecture and art, designed it. The property that the church and Parish House sit on belongs to the Association, but the buildings are maintained by the congregation. Should the congregation disband, the buildings would return to the Association.

The Wesleyan Grove Historic District, also known as the Martha's Vineyard Campground in Oak Bluffs, Massachusetts, was listed in the National Register of Historic Places on December 14, 1978, and it received the 2002 Bartholomew Gosnold Award presented by the Martha's Vineyard Historical Society and the Martha's Vineyard Preservation Society for architectural preservation.

Today, as always, the Association is trustee of the land and leases lots to the cottage owners. The MVCMA continues to remain an integral part of the community by providing the largest venue on the island and maintaining a full summer program, which it has done from the early years of the camp meeting, for all to enjoy.

Following is a list of all of the resources within the boundary. The list gives the address, the Oak Bluffs Lot number, the Massachusetts Historical Commission number, the historic use of the property, the date or approximate date of construction, the style or type of building, and whether it contributes to the significance of the National Historic Landmark or not. It was determined that a building would not contribute to the district if it was constructed after the period of significance or if it had been remodeled or restored after the period of significance so that it no longer appeared as it had during the period of significance. The buildings at 37 Clinton Avenue, 74 Clinton Avenue, 88 Clinton Avenue, 1 Dukes County Avenue, 3 Dukes County Avenue, 9 Dukes County Avenue, 9 Forest Circle, 26-28 Lake Avenue, 21 Siloam Avenue, 22 Siloam Avenue, 23 Siloam Avenue, 77 Trinity Park, and 78 Trinity Park were all constructed or rebuilt in the 20th century after the period of significance ended in 1901. Both 20 Lincoln Avenue and 3 Tabernacle Avenue, although constructed during the period of significance, have been identified as being heavily altered (new covered porches, enclosed porches and many additions) in the Massachusetts Historical Commission survey forms so that they no longer appear the same as during the period of significance.

National Register of Historic Places Registration Form

State Significance of Property, and Justify Criteria, Criteria Considerations, and Areas and Periods of Significance Noted Above.

The Martha's Vineyard Camp Meeting Association (MVCMA), formerly known as "Wesleyan Grove," is nationally significant under Criteria 1 and 4 because of its historic connection with the great religious "camp meeting" movement of the early nineteenth century and the architectural style that developed here. Wesleyan Grove had a leadership position in establishing the community form for permanent camp meetings and resorts, and the unusual layout of its grounds was emulated and used as a model at many post-Civil War camp meeting sites. In addition, the new and original American architectural form of the "Martha's Vineyard" campground cottages, built between 1859-1880, was copied and expanded upon at later 19th century camp meeting sites. Besides the many Martha's Vineyard cottages, one of the outstanding buildings within the district is the iron Tabernacle, erected in 1879. This building is one of the few remaining examples of an iron structure created in the late nineteenth century. The period of significance is from the year of the first camp meeting held at Wesleyan Grove in 1835 until 1901, the date of the last major structural change to the Tabernacle building, the major centerpiece of the community.

Adding to the national significance is the fact that it was at Wesleyan Grove that the only substantial recorded history, in published book form, of any American camp meeting was written by its first secretary, Hebron Vincent, from 1835 to 1869. Much of what we know about the camp meeting phenomenon and its growth comes from this documented source.

WESLEYAN GROVE AND ITS DEVELOPMENT AS A CAMP MEETING

The idea of holding camp meetings for religious purposes was an American phenomenon. The camp meeting, first introduced early in the nineteenth century in the state of Kentucky by the Presbyterians, with Baptists and Methodists taking part, was basically an open air revival which lasted several days. Those who came and participated had to eat and sleep at the site because they were usually far from their homes, therefore a camp aspect developed. The Presbyterians and Baptists soon withdrew from the religious practice of camp meetings, leaving it to the Methodists, who embraced it with religious fervor. Within a few years of its beginnings around 1800, the camp meeting had spread very rapidly all over the western frontier and into the South and New England via the Methodist circuit riders. These itinerant preachers held small woodland revivals on temporarily-leased lots. The living conditions were primitive. People slept in society or church tents with straw spread on the ground or on board floors with a blanket placed over them. The food was prepared a week in advance. The people brought what they needed with them and took everything away when they left. The camp meeting lasted for about a week, usually from Monday to Saturday sometime during the month of August. By the middle of the nineteenth century the camp meeting sites had become more permanently established in some locations.¹

The Martha's Vineyard Camp Meeting Association (MVCMA) grew directly out of this religious camp meeting movement and was a leader in establishing the community form of permanent camp meeting grounds. The Vineyard's first camp meeting was held at West Chop in 1827 and was led by Rev. "Reformation John" Adams. Jeremiah Pease, a citizen of Edgartown and a staunch follower of Rev. Adams, was directly responsible for the first camp meeting at Wesleyan Grove, which led to the eventual establishment of the MVCMA. He chose the site to serve as a regional camp meeting for Martha's Vineyard, Nantucket, and the adjacent areas of Cape Cod

and southeastern Massachusetts. At the end of the first Wesleyan Grove meeting in 1835, money was raised to purchase the lumber used for the benches and preachers' stand, and the decision was made to keep this now-sacred spot as a permanent one. With the exception of 1845, this site has been used for religious and community purposes annually ever since.

The 1835 site was cleared of underbrush and a driftwood shed was erected for the preachers with a stand built onto its front to serve as a pulpit. In front of the stand was the usual arrangement of a temporary altar, with a railing that enclosed a space of about 25 feet by 12 feet. Benches were provided for singers during the preaching service and also served as a place for penitent sinners to gather. Beyond the altar were backless board benches for the participants, and beyond them, arranged in a semi-circle, were the nine society, or church tents.

In the early days of the camp meeting at Martha's Vineyard, shouts of "Hallelujah!" "Hosanna!" "Praise the Lord!" and "Amen!" could be heard throughout the grounds. Fiery orators held the attention of throngs. The early camp meetings at Wesleyan Grove were good examples of classic revivals emulated by later camp meetings. The camp meeting was serious business and children were not in attendance. The meetings were dedicated to the salvation of human souls. For one week attendees concentrated on religion morning, noon, and night. Wesleyan Grove grew to be one of the largest and best known camp meetings of the mid-1800s, with 500 tents and as many as 20,000 people attending the Sabbath.

Until 1855 the camp meeting met for one week to ten days and was exclusively religious in purpose. But, between 1855 and 1865 the camp meetings began to change, taking on a more social character with less of the spiritual according to their critics. In the opinion of Hebron Vincent, the camp meeting secretary and chronicler, a large portion of both the ministry and the laity was as devoted and laborious as ever, and oftentimes great numbers of sinners were saved. The camp meetings now lasted from one to three weeks and, while they were still religious in nature, they also permitted participants to benefit from the sea air, bathing, and pleasant social interaction. More and more family tents were established for greater domesticity. Children began to attend prayer and church meetings and families began to stay for longer periods of time. Commercial enterprises emerged to accommodate the needs of the many people. Transportation services were expanded and more wells were dug. The camp meeting at Martha's Vineyard was taking on the characteristics of an organized and well-run community, and was in fact becoming a summer resort. "The Massachusetts compound consciously united religion and recreation in a woody hideaway."²

During the 1860s Wesleyan Grove continued to develop in the manner established in the 1840s and 1850s: constant expansion fueled by a creative mix of heightened religious experience, human density, and nature. It became an institution. In 1860 Sirson B. Coffin proposed 11 articles of agreement for a Martha's Vineyard Camp-Meeting Association. Membership included the presiding elders of two Methodist districts from southeastern Massachusetts and Rhode Island, the ministers of participating churches, tent-masters of the society tents, and elected officers. The membership was to choose 15 Methodist laymen to serve as the finance committee, the Association's executive arm. Coffin had been disturbed by a trend away from the more religious meetings of the 1840s, and the finance committee was meant to relieve the leadership of administrative burdens so it could concentrate on the spiritual. Tents and cottages now had to be licensed. In June 1864, four laymen operating as trustees of the camp meeting purchased the grounds, 26 acres, for \$ 1,300, a sum raised from tent and cottage owners. Four years later the MVCMA was incorporated by an act of the

National Register of Historic Places Registration Form

Massachusetts legislature. In 1931, the MVCMA ceased to be a Methodist institution and became interdenominational.

Many people from the local community took part in the religious services and activities provided. In the early 1920s, Professor Warren P. Adams and sixty singers came to the camp meeting and have been credited with laying the foundation for the Wednesday night Community Sings, which were well-established by the mid-1930s. This was just the beginning of the many programs made available to the community over the years.

“The Vineyard camp meeting, with its hundreds of tiny cottages on little tent lots and a variety of communal parks, was often seen as a Utopian social critique. Families in the ‘charmed circle’ around the preaching area banished feelings of isolation and anxiety, the causes of greed and selfishness in city life. Nature and experiential religion were the catalysts for a better, kinder society. All of this was uniquely American. Only in this big new land could a prosperous middle class create and maintain new communities based on a non-establishment religion and a wilderness experience of nature.”³

Families continue to come to enjoy the combined atmosphere of a summer waterside resort and a religious setting reminiscent of that enjoyed by the early participants. During the summer season there are Sunday services held in the Tabernacle, Bible studies during the week under the “camp meeting tent” in Trinity Park, and children’s weekly Camp Meeting in Grace Chapel. Additional Tabernacle programs include weekly community sings, a variety of concerts, graduations, and art shows.

Wesleyan Grove and the MVCMA were used as a model for many post-Civil War camp meetings. In referring to the Bay View (Michigan) (NHL, 1987) camp meeting, it was stated that, “Like Ocean Grove, New Jersey, or Fair Point camp meeting at Lake Chautauqua, New York, it was formed on the model of the pioneer permanent camp meeting at Martha’s Vineyard, Massachusetts.”⁴ Bay View’s founding secretary, Reverend Seth Reed, had been a trustee of the Vineyard meeting.

Reverend Seth Reed, who had been associated with Wesleyan Grove in the 1860s, stated,

“And there, too, I became acquainted with and member of the Martha’s Vineyard Camp-meeting which has been called the Mother of New England Camp-meetings, and the memory of those ministers I heard preach there will stay with me till I meet them again. Little did I think, when I first attended that meeting in 1860 and occupied a little tent, with my straw-bed upon the ground, and within a few feet of the first cottage ever built upon the ground, a little one-room cottage built of rough boards by old Dr. Frederick Upham, that in my day Martha’s Vineyard Camp-ground would come to be the great beautiful Cottage City that it is, with its influence reaching across our continent.”⁵

Hebron Vincent, a self-educated teacher, minister, attorney, and historian from Martha’s Vineyard attended the first meeting in 1835 and was its secretary until his death in 1869. He wrote two detailed volumes, published in 1858 and 1869, about the camp meetings. These documents constitute the only substantial contemporary chronicle of any American camp meeting. In preface, Vincent insisted that he was writing about a place as well as an event and an institution. This sense of place, one “hallowed by a thousand Christian associations,” forever reverberating with ancient gospel sermons, earnest prayers, “pathetic appeals to the unconverted, and

⁵ Reed, Seth, *The Story of My Life* (Cincinnati, OH: Jeunings and Graham, 1914) 78.

exhilarating songs of praise," never leaves his prose.⁶

Hebron Vincent's history of the camp meeting at Wesleyan Grove during its first decade and a half (1835-1850) forces reconsideration of the generally accepted notion that camp-meeting fervor had waned by the end of the second decade of the century, leaving the events poised between controlled religious services and various recreational pursuits. He recorded many instances of the seriousness and the fervor of the worshipers during the middle and later decades.

As the camp meeting at Wesleyan Grove began to take on some aspects of a summer waterside resort, it was Vincent's opinion that in the 1840s constant growth and gradual institutionalization never overwhelmed the basic mix of nature, human warmth, singing, praying, and direct and simple evangelistic preaching.

By 1850 Vincent was defending the camp meeting's recreational spirit as a salubrious retreat from summer city ailments and for the fact that the "tired nature occasionally seeks repose from toil and strife of business."⁷ However, Vincent did emphasize that, "It would be a foolish Christian who used only the natural and recreational aspects of the grove and failed to avail himself of the greatest spiritual opportunity of his life."⁸

CAMP MEETING GROUND LAYOUT

The location for the camp meeting campground on Martha's Vineyard was ideal. Success for the new meeting was aided by the fact that, for many, it was accessible only by water. The island isolation increased the feeling of other worldliness, and the Vineyard has always been known for its beauty.

The original one-half acre site was located in a "venerable grove of oaks" on land that was part of William Butler's sheep pasture in what was then the northern reaches of Edgartown township close to Nantucket Sound, and east of the road from the whaling port to the hamlet of Eastville on the Holmes Hole (now Vineyard Haven) harbor. The land sloped gently, embracing a freshwater lake and shelving into a white beach. Hebron Vincent describes the location as follows: "Such another spot could not be found on earth so nearly resembling Eden in its primeval beauty and loveliness."⁹ On his arrival, the famed abolitionist, Reverend Gilbert Haven, describes the location in a letter to his family as follows: "It certainly is the most perfect spot for a camp-meeting I ever saw, with fresh sea air, magnificent bathing in the real Atlantic outside Cape Cod, with a grove of small but thickly studded oaks, and the barrenest sand hills with salt grass and scrub oaks."¹⁰

The original layout of Wesleyan Grove was a simple formation of a circle enclosing the preaching area and the society or church tents. In 1859 a road, now known as Trinity Circle, was built encircling that area. In 1864 the Association purchased the 26 acres it had been renting. As the area continued to expand (additional grounds were purchased in 1866), it developed in an unusual radial pattern. In 1854 The Reverend B. W. Gorham published a guide for camp meetings titled, *Camp Meeting Manual, A Practical Book for the Camp Grounds*,

⁶ Vincent, Hebron, *History of the Wesleyan Grove Camp Meeting from the First Meeting Held There in 1835 to that of 1858* (Boston: George C. Rand and Avery, 1858) 5.

which provided a guide to campground layout and a moving account of conversion and sanctification experiences. By the 1870s there were a number of campgrounds across the country with radial or wheel plans, the central circles reserved for preaching and the radiating spokes for family tents or cottages. Since Reverend B. W. Gorham's 1854 book listing guidelines for the physical form of pre-Civil War camp meetings never suggested anything so complex, it is possible that the form that evolved on the Vineyard was applied elsewhere, making the motif a testament to the primacy of Wesleyan Grove among post-Civil War permanent camp meetings. Round Lake campground (1869) near Troy, New York, had a radial plan and its founders had hired Sirson P. Coffin, Wesleyan Grove's superintendent, to help prepare the site. Gorham, himself a frequent Vineyard preacher, has been credited with the layout of a radial camp meeting at Manheim, Pennsylvania (1868). Wesleyan Grove was, however, even more complex because it was multicentric. Paths radiating from Trinity Circle lead to smaller parks, some in circular form, where groups of other tents had been located - County Street Park (now known as Wesleyan Grove), Forest Circle, Washington Park (now Victorian Park), Cottage Park, Crystal Park (now Vincent Park), Washington Avenue (now Butler Avenue), Rural Circle, and Clinton Avenue. The smaller circles, some surrounded by larger concentric circles, have in them small paths radiating to other circles or open spaces. The method of the grounds layout was an additive one of discrete neighborhood units, each built around small variously shaped parks, and scattered loosely on the land, as if without premeditation. The formal motif was established by small circles of tents and cottages in satellite or tangential relation to the enlarged radial-concentric main circle.

The final effect of this ultimately 34-acre development is remarkable. The layout of the MVCMA grounds remains almost exactly the same as when it was mapped by Richard L. Pease and John H. Mullin in 1873. Even today, without the revivals and the attendant throngs and with the loss of many cottages and tents, the grounds are distinct in their organization and character. They maintain their quality of being of another world even though they are now encapsulated in the later Victorian resort of Oak Bluffs.

Other camp meetings followed the lead of the camp meeting on Martha's Vineyard in choosing a location that provided a healthy climate and a peaceful environment for the benefit of the body and the soul. "Bay View's foundation indicates that at least some of the practical aspects of the Vineyard meeting were carefully cultivated. It was placed on a dramatic, forested site with healthful springs and a refreshing western breeze off the lake." Bay View's plan was a deliberately irregular exercise in picturesque land designed with curving streets and internal parks around the preaching space. Such planning at the time could be found only in cemeteries, a handful of suburbs and Wesleyan Grove. The founders of Bay View had spoken of, "the proposition ...to fit up the grounds with great care to encourage the erection of permanent cottages where families may spend the hot season in whole or in part, the same as Martha's Vineyard."¹¹

The unique character of the MVCMA grounds, a heritage from a different era, has been wonderfully preserved by the many generations of cottage owners and by the Association itself. The boundaries are clearly defined, enough to move some to say that when they enter the grounds, they are entering another world.

NEW ARCHITECTURAL STYLE: THE CAMPGROUND COTTAGE

Sometime around 1860 island carpenters invented what appears to be an original American building type -- the campground cottage, or, as it is often termed, the Martha's Vineyard Campground Cottage. This new type merged forms from tents (the broad central opening and the rectangular, front-gable mass derived from the tent

¹¹ Feunimore, Keith J., *The Heritage of Bay View 1875-1975: A Centennial History* (Grand Rapids, MI: Eerdmans Publishing Co., 1975), 15.

platforms on which they were constructed); from the picturesque cottage tradition (the vertical boarding and jigsaw trim) as seen on the 1859 Mason-Lawton cottage (70 Trinity Park); and from churches (the round-arched Romanesque styling or ogive-arched Gothic styling of most of the cottages). Most Methodist churches from the mainland cities, from which the participants came, were Romanesque or Gothic revival in style. The architectural form is remarkable in its singularity in appearance and structure, and must be considered as an invention of local carpenters and thus not attributable to any one architect or architects.

Many formal aspects of the Martha's Vineyard Campground Cottages can be found at later religious campgrounds scattered from Maine to California, the imagery probably transmitted by stereoscopic photographs.

Most post-Civil War camp meetings in the northern part of the country built variants of a special architectural form, the campground cottage, a building type which was invented at the most famous of these meetings, Wesleyan Grove on Martha's Vineyard, Massachusetts, Bay View's [Michigan] inspiration. The Martha's Vineyard campground cottage is a one-and-one-half-story, end-gable structure with a symmetrically placed double door and two lancet windows under a projecting balcony served by a second double door in the gable. The Vineyard cottages had pointed or round-arched tops to doors and windows, Gothic or Romanesque imagery derived from New England Methodist churches.¹²

Of the roughly 500 cottages shown in an 1880 bird's-eye view, 312 stand today. Some have been joined together to form larger cottages, some have been moved to other locations and some fell into disrepair and were torn down. The Martha's Vineyard campground cottage was imitated at many later sites such as Bay View, Michigan and Lakeside, Ohio, often with variations peculiar to each location.¹³

As David McCullough said when he presented the Bartholomew Gosnold Award for architectural preservation in September 2002, "Today, there are 312 cottages on 34 acres, wonderfully preserved. If an Association member from 1875 traveled forward in time to 2002 and toured the campgrounds, he or she would feel quite at home."

THE TABERNACLE BUILDING

The year after Trinity Methodist Church was constructed, the Association built the wrought-iron Tabernacle, the most significant single building in the campground. The beautiful iron Tabernacle, which seats over 2,000, was designed and built in 1879 by John W. Hoyt of Springfield, Massachusetts. The building was completed in less than four months after the contract was signed.

The Tabernacle covers the original consecrated ground of 1835. By 1869 the attendees at the revival meetings needed more protection from the sun and rain because the large oaks that had attracted the founders 35 years before had begun to die. In that year the Association erected a mammoth canvas tent supported on tall poles. The tent proved unsatisfactory because of ventilation problems and a tendency to collapse in storms. In 1878 the Association solicited designs for a large wooden tabernacle -- a building of vast roofs, minimal supports

National Register of Historic Places Registration Form

and open sides -- to shelter the meeting. The plans it received, which were elaborate versions of the wooden tabernacles or "arbors" of southern camp meetings, proved too expensive to build. Campground resident John W. Hoyt solved the problem with a much cheaper wrought iron structure that was largely prefabricated and could be speedily erected on the uneven site. Hoyt's building is probably derived from southern tabernacles, bridge, or market hall construction and various structures that he could have seen at the Philadelphia Centennial of 1876. There was a renovation in 1901 when the east entrance tower was added and corrugated metal panels were replaced by wood that was covered with ornamental metal shingles. The original corrugated iron roof was replaced by wood in the late 1890s and by corrugated asbestos/cement in the 1930s without significantly altering the appearance of the building. Benches that had been built in 1846 and 1851, and were used on the same site when the only cover was the oak trees, were put in the building in time for the first service, July 26, 1879. They still remain in service today. Since there have been no major structural changes in the Tabernacle since 1901, that year has been designated as the interpretive period for the restoration, which is presently underway.

However, the Tabernacle's special place is not limited to its role in the religious and cultural history of the Island. The iron Tabernacle at Wesleyan Grove is an extraordinary nineteenth-century building, a product of the remarkable developments in architectural engineering during that time. The availability of new materials and construction processes allowed architects to create buildings with soaring lightness and beauty heretofore unknown and scarcely imagined. The MVCMA's Tabernacle is a fine example of this new freedom in design and expression for the architects of the era. It joins the tradition of such splendid achievements as the Crystal Palace in London (1851), the Eiffel Tower in Paris (1889) and many more modest buildings such as railway bridges, railway stations, market halls, and exhibition structures including those at the 1876 Centennial Exposition in Philadelphia.

The Tabernacle is still the center of the Campground and of the many religious and cultural programs of the MVCMA and has been since its construction. It differs very little in appearance from its original construction. Over the years it has become a center of activity for the citizens of Oak Bluffs and the island. It held the camp meetings of years past, and today church services are held there during the summer season. It is the largest venue on the Vineyard and is available to islanders for special functions such as lectures, school graduations, the All Island Art Show, weddings, and memorial services. With its excellent acoustics and beautiful setting, many musical groups, benefit performances, theater groups, choruses and even the Boston Pops Esplanade Orchestra find enthusiastic audiences in the Tabernacle.

Over the years the MVCMA has become increasingly interdenominational and ecumenical. While the MVCMA was established by Methodists, and, for much of its history, was governed by Methodists, it has always been an autonomous organization and was never formally affiliated with the New England Conference of the United Methodist Church. Historical records document the participation, in the congregation and in the pulpit, of many non-Methodists at the early camp meetings. Today, everyone is welcome and the rules governing the leaseholders are basically 'good neighbor' rules that are necessary because of the proximity of the cottages.

Visitors to the MVCMA grounds, with the Tabernacle located at its center, can learn about the historic connection with the religious camp meeting movement of the nineteenth century. They can view historic nineteenth-century artifacts at the MVCMA Cottage Museum. They can walk along the unique layout of concentric circles, with pathways radiating from circles to other circles and parks, that was used as a model for many post-Civil War camp meetings. They can see the many examples of the original architectural form of the "Martha's Vineyard Campground Cottages" that were copied and expanded upon at later camp meeting sites.
