### DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

"Mount Tammany" or "Tammany" is located at the end of Tammany Lane, north of U.S. Route 11, just northeast of Williamsport in Washington County, Maryland. It is situated on an area of level ground and faces south.

Mount Tammany is a two-part brick structure resting on low fieldstone foundations. The main block is a two-story, three-bay structure with a side hall entrance. Attached to its north gable wall is a two-story, five-bay structure also of brick, but much lower in height than the main section. Apparently the wing was originally one and a half stories high.

The walls of the main section of Tammany display Flemish bond brickwork at the front or south elevation and the east end wall. American or common bonding is used at the north and west elevations. A water table of quarter round bricks extends along the south and west walls. The entire surface of the house has been painted white. Prominent wall decoration at the front elevation consists of flat arches of cut stone with large keystones. Flat arches of brick are present above other windows.

Windows at the first story of the front elevation have been enlarged into French doors. Above them are openings with twelve-over-eight light sash held within wide frames. A twelve-over-twelve pane sash is used at the first story in the east end wall. A small circular window is set in each gable. Original windows in the wing have nine-over-six light sash. In both sections most windows are flanked by louvered shutters.

The main entrance is located in the easternmost bay of the front elevation. It has trim similar to that of the windows and is topped with a broad, four-light transom. Extending across the front elevation is a one-story porch with a low hipped roof. It is supported by round Doric pillars.

The roof of each section of the house is sheathed with sheet metal and terminates with barge boards set directly against the end walls. The eaves at the front elevation of the main section are finished with modillions under which runs a course of small dentils. At other elevations the eaves treatment is more simple. A large brick chimney is located inside the east gable end. A smaller, more recent furnace flue is attached to the west end wall. Another brick chimney is located inside the east end of the wing.

The interior of the main section of the house at the first story level consists of a wide entrance and stair hall and a large double parlor, each section having a fireplace. The woodwork is elaborate, some appearing to date from the late 18th century and some from the mid or late 19th. Door architraves displaying crossettes or "ears" at their upper corners are among the 18th century details of the house. Later work includes the French doors and arched fireplace openings trimmed with acanthus leaf cartouches.

(DESCRIPTION, continued)

In the main section most of the architectural fabric is of the last quarter of the 18th century. The major renovations occured during the third quarter of the 19th century when the parlor fireplaces were redesigned and the front parlor windows were made into french doors. During the late 19th century, the 1½-story wing was enlarged to two stories. There are two barns near the Tammany house, but they are owned separately and do not appear to date from the 18th century. Near the house is a spring, but no domestic outbuildings survive.

(SIGNIFICANCE, continued)

When he settled at Tammany, Matthew ended his commercial ventures and became a successful farmer. He died in 1823, leaving a sizable estate, which was not settled until 1862, but was administered by several of his sons, who kept a common fund for support and education of all the Van Lear children.

Matthew Van Lear's wife was Mary Irwin, who was born near Mercersburg in Franklin County, Pennsylvania. One of her sisters married William Findley, Governor of Pennsylvania and later U.S. Senator. Mary Irwin's brother, Archibald, had a daughter who married a son of William Henry Harrison and served briefly as mistress of the White House. Another daughter of Archibald Irwin married another Harrison son and became the mother of Benjamin Harrison. Sophia Van Lear, youngest child of Matthew and Mary Irwin, married Archibald Irwin Findley, a lawyer from Chambersburg, Pennsylvania and son of William Findley.

The Tammany mansion today is part of a housing subdivision which dates from the 1950s. It is visually separated from the more recent dwellings by its large lot screened with old plantings.

### STATEMENT OF SIGNIFICANCE

#### SIGNIFICANCE

Known throughout its history as a "Country Mansion", Tammany is a relatively high-style building, a rarity in 18th century western Maryland. The brickwork, woodwork, and architectural detail are typical of the late 18th century in general, exhibiting Georgian stylistic influences. However, these details are unusual for 18th century Washington County. Brick was not often used as a building material, log and stone being favored before 1800. Typical 18th century structure in western Maryland tend to be vernacular in character, lacking stylistic embellishments such as modillions and an elaborate stair.

The interior of Tammany retains much 18th century interior detail. The alteration of the parlor fireplaces and front parlor windows in the late 19th century are typical of that period and continue the tradition of interest in style begun here in the 18th century.

The Van Lear family that built this house and also owned it when the 19th century changes were made was a prominent one in Washington County, as suggested by the quality of their home.

#### HISTORY

Tammany, a two-part brick house near Williamsport, Maryland, is believed to have been built during the 1780s by Matthew Van Learn, a prominent early resident of Washington County. The property remained in the hands of his descendants until 1928. The Van Lear family was related to William Findley, Governor of Pennsylvania, and President Harrison, President of the United States.

Additional information on the history of the Van Lear family is to be found in the attached excerpts from The History of Western Maryland by Thomas Scharf and T.J. C. Williams' History of Washington County.

The Van Lear family is one of the oldest in Western Maryland. The branch that came to Williamsport consisted of two brothers, Matthew and William, who, according to local histories, engaged in trade with the West. They later purchased a large tract of land near Williamsport where Matthew built this brick house shortly after the close of the Revolution. He named it Tammany after a well-known indian chief of that time. Tammany is said to have been built of bricks made on the property.
