AUG 1 1991

National Register of Historic Places
Continuation SheetSection number 7 Page 1Description

The John Thrasher Farmstead is being nominated for its residence only, which is a one-and-one-half story, gable roof building of double-pen, saddlebag design and box construction. The central chimney typical of this floor plan was actually an exterior end, massive cut stone chimney originally, but was later enclosed within a chimney closet when the slightly smaller western pen was added. The original gable roof kitchen, which featured an open passageway between it and the main house, was later rebuilt and the passageway enclosed, though the current kitchen retains the wall and entrance that would have composed the front of the kitchen as well as the same puncheon floor that exists in the older pen. The exterior walls are board-and-batten, the roof is covered with corrugated metal, and the foundation is composed of stone piers.

A central, single-leaf entrance on the southern elevation provides access to the chimney closet only. Two four-over-four double-hung wood sash windows flank the single-leaf entry in the original, eastern pen, while a single, identical window lights the western pen, placed to the west of the third single-leaf entry. The continuous platform across the front may have been covered by a porch roof earlier, though its advanced state of deterioration and the lack of evidence of rafters attached to the wall of the building make this difficult to prove. The northern elevation features a blank wall on the rear of the eastern pen, two covered windows on the rear of the kitchen ell, and a pair of entrances into the rear of the newer, western ell, with the wall finished by a covered window.

The eastern and western elevations are similar in that neither is currently open, though a window opening in the western elevation has been covered with corrugated metal.

The interior is simple and without discernible ornament. The original half-turn staircase located in the northwest corner of the original pen survives, though a second, later staircase has been added in the space directly behind the chimney, which provides access to the sleeping loft above the eastern pen from the kitchen ell. Of greatest significance, however, is the construction of the floors. The floors of the newer pen are composed of a simple plank deck supported on 2" x 8" boards for both plates and joists; however, the floor of the older pen is a puncheon floor, constructed of split, rough-hewn logs that are half-notched at the ends to fit over the sills, which are also slightly notched to receive them. The plank deck is sealed underneath with molded battens, which form the surface laid upon the puncheons. This batten method is employed for both the floor of the first story and the ceiling of the second story sleeping loft, although the second floor is composed of sawn, square-end joists that rest upon summer beams nailed into the wall planks along the long sides of the house. These joists are covered with a plank deck and molded battens on the ceiling of the first story and with the plank deck only on the floor of the sleeping loft (this floor has since been removed and salvaged), both of which create a space equal to the height of the joists. The summer beams that support the second floor are covered on the first floor with slanted, "gambrel" boards which round off the ceiling.

**United States Department of the Interior
National Park Service****National Register of Historic Places
Continuation Sheet**Section number 8 Page 1**Significance**

The John Thrasher Farmstead residence is an outstanding example of vernacular craftsmanship in the service of both the construction of a single pen residence originally and in the expansion of that home into a saddlebag residence. It was built (and later enlarged) by John Thrasher, a local farmer, c. 1885 on land adjacent to another farmstead, that of the Ransom family. The skill and construction expertise exhibited in both the overall framing and the notching of the sills and puncheons of the older, eastern pen are obvious; however, the use of molded battens to insulate the first floor of the pen and to finish the first story ceiling while also sealing the cracks to the sleeping loft above is a solution that is both practical and aesthetically consonant with the use of battens throughout the rest of the structure. The desire to finish off the first floor space with the gambrel boards that hide the summer beams for the second floor is unusual and equally creative. In spite of its unfortunate state of decay, the John Thrasher Farmstead House remains a remarkable, relatively intact testimonial to the craftsmanship and aesthetic sensibilities of a rural builder and carpenter during the Railroad era as manifested in a gable roof, saddlebag plan residence; thus it is being nominated under Criterion C with local significance.

Reviewer's Comments

The boundaries of this property are presently located along building lines. A resource listed in the National Register should include all features of the property which contribute to its significance. In almost all cases this includes its historic setting. Page 77 of National Register Bulletin 16, Guidelines for Completing National Register of Historic Places Forms, states that "the boundaries of buildings should include the land surrounding the building, unless the lot occupied by the building contains no surrounding land as in the central business district of most cities."

Please revise the boundaries to include the property historically associated with the resource. If a portion of the original setting has lost its integrity, please explain.
