National Register of Historic Places  
Registration Form

JUN 26 1989

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "X" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

Pleasant Historic District is a six-block neighborhood in southwestern Mount Pleasant (pop. 3,575), Maury County, Tennessee. The district comprises sixty-four properties in an area roughly bounded by Pleasant Street on the southeast, Hay Long Avenue on the northeast, College Street on the northwest, and Washington Avenue on the southwest, an area encompassing approximately seventy acres.

The district slopes upward to the north from Pleasant Street to Cherry Street. The streets are arranged in a grid pattern platted in 1898. Surrounding residential areas contain residences of relatively recent construction or historic properties of little or no architectural significance or that have been altered to the point that they no longer retain integrity.

Development of the Pleasant Historic District follows the pattern as outlined in Property Type - Residential Historic Districts, in the Multiple Property Documentation Form for the Historic and Architectural Resources of Mount Pleasant, Tennessee. Principal buildings in the district are primarily single family dwellings, although one former residence, at 202 Pleasant Street (#28) is now used as a funeral home and 312 Hay Long Avenue (#11) is a modern duplex. The houses occupy large lots shaded by indigenous hardwood trees, and some of the properties are fronted or surrounded by stone walls or iron fences. Both the buildings and landscaping of the district retain a high degree of architectural and historical integrity.

Houses in the district range from one to two and one-half stories in height, and are predominantly of frame construction (forty-four houses), with simple weatherboard siding the most common wall surface. However, the district does contain thirteen brick houses and the molded concrete block John Ruhm House (#25), and the sawn log Jenkins-Knox House (#23). Outbuildings are predominantly frame, although log and brick smokehouses and small guest houses in a variety of materials are also represented.

The area contains some of Tennessee's most outstanding examples of houses in the Greek Revival style (Martin Stockard House or Manor Hall, #34), Eastlake-influenced style (Tucker House at 409 Hay Long Avenue, #19), and Victorian Classical Revival style (Hay Long House, 402 Hay Long Avenue,

#15). Early twentieth century houses include residences in the Cottage Revival style, an eclectic style characterized by steep-pitched irregular gable roofs, arched entries and corner porches, and mixed multi-light fenestration (Stein-Shackleford House at 316 Hay Long Avenue, #13). Bungalow-influence houses are frequent, including several with extensive decoration characteristic of the Craftsman and Arts-and-Crafts movement. The best examples are along Washington Avenue, and include the ca. 1925 Mefford House at 502 Washington (#58) and the Hinton Kittrell, Jr., House at 601 Washington (#63).

Vernacular buildings include a large number of simple cross-gable plan cottages, several larger Foursquare plan houses, very small and very simple rectangular frame houses on the cross streets. Two houses, the Whitlock House at 404 Washington (#49) and the Hogan House at 406 Washington (#51), are in the Pyramid Vernacular style, with steep pyramidal roofs, integral porches, and paired chimneys. A number of converted guest houses, servant houses, and garage apartments now serving as single-family residences are also a part of the district. Other vernacular style houses included in the district are Folk Victorian and Cottage Revival style houses.

Several outbuildings are of unusual design or construction. The Wheeler carriage house (#64) is a very large frame structure, built about 1905, and distinguished by its denticulated return, center-gable roof with finials, and ornate central wooden cupola. The tall Killebrew smokehouse (#28) is the only known shingle-clad smokehouse in the county. The matching, side-by-side Wheeler house smokehouse and coalhouse (#33) are still intact. Manor Hall (#34) retains its original kitchen dependencies and old log smokehouse.

Listed below, by street address, are the principal resources in the district. Of the ninety-six resources in the district, sixty-seven are listed as contributing; these are forty-nine houses, six garages, a carriage house, three guest houses, three smokehouses, a coalhouse, a gazebo, a kitchen, and two outbuildings. The remaining twenty-nine resources are non-contributing, and include fourteen houses, thirteen garages, a guest house, and a tenant house.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

The Pleasant Historic District in Mount Pleasant, Maury County, Tennessee, is nominated under National Register criteria A and C for the associations many properties have with the establishment of the Maury County phosphate industry and for significance to Mount Pleasant and Maury County in architecture. The district includes several very large houses of the company owners, as well as a number of substantial houses occupied by company managers, clerks, and chemists. The Pleasant Historic District is nominated under the registration requirements for Residential Historic Districts set forth in the Multiple Property Documentation form for Historic and Architectural Resources of Mount Pleasant, Tennessee.

A large part of the Pleasant Historic District was opened up in 1899 as one of Mount Pleasant's first subdivisions, set up to provide for the economic boom which occurred in conjunction with this early phase of industrial development. The district illustrates the development of late nineteenth and early twentieth century architecture in the small Maury County city. Buildings date from the 1850s to about 1940 and reflect a wide variety of styles, from the Greek Revival through the Bungalow influenced houses of the early 1900s. The houses range from the main house of a great antebellum plantation and the imposing houses of the early twentieth century phosphate interests to small cottages in various folk designs. Properties are, for the most part, well-maintained, and the district retains a strong sense of neighborhood character.

The oldest house in the district is the Martin Luther Stockard House, Manor Hall (#34), completed in 1859. The massive two-story brick house is one of the most outstanding examples of Greek Revival architecture in Tennessee. Its main facade, which faces southeast towards Pleasant Street, is distinguished by its monumental portico, with four tall reeded columns topped by "Tower-of-Winds" capitals supporting a low pediment derived from the Choragic Monument of Thrasylus; a heavy cornice and attic parapet, a raised stone foundation, and heavy corner pilasters. Cast-iron window lintels are pedimented and decorated with anthemions. Emerging Victorian

**Verbal Boundary Description**

The Pleasant Historic District contains portions of eleven blocks and is bounded roughly by rear property lines of properties facing College Street on the northeast, Hay Long Avenue on the southeast, Pleasant Street and Wheeler Alley on the southwest, and Washington Avenue on the northwest. The district boundaries are shown on the accompanying map.

See continuation sheet

**Boundary Justification**

The Pleasant Historic District is centered on Pleasant Street, Hay Long and Washington Avenues. Intrusive properties on the north, east and south along with farm lands on the west have been excluded. Boundaries follow cross streets and property and fence lines. The district boundaries are drawn to include sufficient land to protect the historic setting and integrity of the resources.

period influence is evident in brackets along the cornice, the tripartite entry with arcuated doors flanked by Bohemian-glass sidelights set over marble dado panels, and the use of delicate cast iron on the recessed second story balcony. The house has a one-and-one-half story originally detached brick kitchen at the rear, joined by an inconspicuous recent breezeway. Manor Hall appears to be the work of a skilled architect, but, though the designer is unknown, it appears from family letters that local master builder, Nathan Vaught, was involved in the construction.

Pleasant Street probably originated as a sort of second driveway connecting Manor Hall with the then-Hampshire Road, now Hay Long Avenue. Stockard's great house was apparently the only residence in the central part of the district as late as 1874 when he was attacked in his front yard by unknown assailants; he later died from his wounds. Some houses were being built along the northeast edge on Hay Long at about this time. These would include the ca. 1875 Davis House at 403 Hay Long Avenue (#16), a small H-plan frame cottage with canted gable bay ends, decorative sawn gable work, a bracketed porch, and corbeled chimneys and the Eastlake style Jones House at 407 Hay Long (#18), a two-story irregular frame, weatherboard dwelling with wraparound porch supported by turned and bracketed posts with a spindlework frieze, gable fields clad with imbricated wooden shingles, decorative window lintels, and a tall corbeled brick chimney.

In 1899, Herman D. Ruhm, civil engineer, organized the Mount Pleasant Land and Improvement Company and drew up plans for a new addition to the residence portion of the community, and opened up forty acres southwest of Hay Long Avenue. The new addition would be divided by streets running parallel with Hay Long (Washington and Adams) and cross streets (College, Cherry, and Summer). The parcel was divided into 100 one-acre lots, and was considered a most desirable section for homes, as only nice houses were to be built, and the streets were to be well-graded. Construction began almost immediately, and, by 1915, more than twenty new houses had been built in the addition. (Lots on Adams Street were not developed until much later, and have been excluded from the district. A planned extension of Pleasant Street in front of Manor Hall, shown on the accompanying subdivision plat, was never built. See Illustration 1)

Many other homes in the district were built for residents with early phosphate interests. The fine two-story irregular plan brick house at 209 Pleasant Street (#33) was built in 1903 by phosphate developer, M. E. Wheeler of Rutland, Vermont, for his son, Frank Wheeler, President of the Tennessee Petrified Bone Mining Company; the company secretary, E. Dan Smith, had a two-story frame house two doors up at 107 Pleasant (#31).

Pleasant

Section number 8 Page 3 Pleasant Historic District

Granberry Jackson, proprietor of the Jackson Phosphate company had his brick home put up at 209 Pleasant (#32) in 1898, and, in 1901, a Mr. Gilliam, manager of the company which became International Agricultural Chemicals, moved into his new irregular plan frame house at 201 Pleasant (#27). On Washington Avenue, Miss Suzy Jones, secretary for Ruhm Phosphate, had a large brick foursquare house built about 1910 (#45). Other phosphate developers with houses in the district included Tate Jenkins (#23) and George T. Killebrew (#28). Few, if any, of the actual phosphate miners or workers lived in the area; most of the mining and industrial workers lived in other parts of town.

Although there are a number of Victorian period survivors, (#s 5, 7, 15, 18, 19, 32, 44, 46, and 48), the majority of buildings in the new addition reflect various post-Victorian styles. These include the Pyramid Vernacular (#s 49 and 51), American Foursquare (#s 31, 45, 47, and 62), and Craftsman houses (#s 58 and 63), as well as a number of Bungalows and Bungalow-influenced houses (#s 12, 22, 29, and 58). Infill buildings are, for the most part, small frame houses of simple cross-gable or saddlebag plans.

A number of buildings from the 1930s and 1940s are in part or entirely the work of J. R. Shackelford, known as the Concrete Man, a local mason and contractor. Shackelford's one-time residence is located in the district at 316 Hay Long Avenue (#13), but it was built by another local contractor, Joe Parsons. Shackelford did build the circa 1940 Held House at 411 Washington Avenue (#54), and probably others.

The Pleasant Historic District contains the largest and many of the most distinctive houses in the city, and retains a strong sense of neighborhood identity. This district is the largest identified, undisturbed neighborhood in this small Maury County city, and reflects the enormous economic impact of the early phosphate boom of the late 1890s and following years as evidenced by the fashionable buildings in the district, many of which were built by citizens associated with the industry.
