DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE						
The Oxford-Crown Historic District covers approximately 7.5 acres and contains 29 structures. With the exception of the Oxford Street School, the New School (formerly a Friend's Meeting House) and the Pleasant St. Church, the structures are residential. Stylistically the buildings are predominantly Classic Revival of frame construction and modest in size. Architecturally important buildings include: #1 144 Pleasant Street - A handsome 2½ story red brick ridge- roof Greek Revival house, it is 3 bays wide and 7 bays deep with a single central window in the facade pediment. Also windows are equipped with functional shutters. A one story porch which extends the full width of the facade is composed of architrave, dentil range, frieze and cornice and is supported by 4 well proportioned white wooden Doric columns and 2 pilasters. Under the porch, to the left, are two floor length windows. Offset to the right is the main entrance, flanked by sidelights and surrounded by a simple flat frame. (See Photograph 1) #2 10 Oxford Street - This 2½ story clapboard ridge roof Classical Revival house with Roman composite pilasters at the corners, supporting a full entablature, is 4 bays deep and 3 bays wide with a single central window in the pediment. The doorway, offset to the right, is surrounded by side and transom lights and flanked by 2 Doric pilasters. All windows on the original part of the building are shuttered and capped with shallow pedimented lintels. Apparently added later were: the veranda with its slim fluted Ionic columns, which extends the width of the facade (west) and turns to run partway down the south side; and a room formed by closing in the back portion of the south porch. (See Photograph 2) #3 14 Oxford Street - This 2½ story clapboard ridge roof Greek Revival house with Doric pilasters at the corners supporting a full entablature with a single central window in the facade pediment. The structure is 3 bays wide and 4 bays deep. The porch, with a low pitched roof, which spans the facade is articulated as architrave, freize and cornice, supported by 4 Doric columns and 2 Doric pilasters. The 1st floor windows and the pediment window are capped with shallow pediment lintels, while the 2nd story window lintels are almost obliterated by the frieze that encircles the original portion of the house just below the roof cornice. A rectangular addition protrudes from the facade and to the left of the porch. (See Photograph 3) #6 Oxford Street School, corner of Oxford and Pleasant Streets - This simple, austere 3½ story red brick building is composed of the original building built in 1847, a bell tower added in 1873 and an addition to the west side (the rear of the original building) in 1880. The original section which measure 50' X 52" is 4 bays wide and 5 bays deep, containing double hung windows with brownstone sills and lintels. The L-shaped addition which doubled the size of the original building is compatible to it in material, design and proportion. (Continued)

Physical Appearance (cont.)

Page 2

The original section is ridge-roof Classical Revival in Style, unadorned by classical ornament but its proportions and certain structural elements are of Roman inspiration. To suggest the high podium of the Roman temple, a course of ashlar granite encircles the building at the lintel level of the ground floor windows. To give the effect of the temple columade, the central section of the 2nd and 3rd story wall is recessed on each side, forming pilasters at the corners and a frieze just above the lintels of the 3rd story windows. The placement of the windows also contributes to the effect of a columnade. On the facade, a pediment containing a central palladium window, added in 1880, rises above the 3rd story frieze.

The square Italian Romanesque style belltower of matching brick, is attached on its east side to the northwest end of the original building and projects a few feet beyond the north wall. It is about 12'8" square, rises to a height of about 6 stories and is capped with a low pitched pyramidal roof. Although different in style, the tower is related to the rest of the building by the windows on its north side and by the treatment of the corners as pilasters. In 1880, the architects strengthened this relationship by repeating the arches of the belfry openings and the corbelling, which projects just below the tower roof, in the arcades of the enclosed porticoes added on the north and south sides, and in the palladian windows which were placed at that time in the gable ends.

Also in 1880 a shed portico, supported by 4 wooden Gothic hammerbrace brackets, was placed over the east entrance. Roof dormers and ventilation ducts were installed on the north and south roof of the earlier section of the building.

In 1917, on the north side of the original section, 2 windows each, of matching materials and dimensions, were added on the 1st and 2nd floors between existing windows which had previously been regularly spaced. (See Photograph 4) 6

#9 15 Oxford Street - This 2½ story clapboard Renaissance Revival house built in 1850, is cruciform in plan with a gable on the facade. The main entrance is in the east wall of the north arm of the cross. Windows in the central section of the facade are centered and arranged in pairs the 1st story pair being rectangular and each of the 2nd story pair ending with a triangular arch at the top. These and other windows are capped with bracketed cornice lintels. Centered in each gable is a hexagonal window with 6 triangular panes. An unusual classical detail is seen in the handsome mutules with guttae and anthemion motif under the soffits of the eaves. Another detail which distinguishes this house is the one story piazza, added in the 1870's with jigsaw railing in the circle and star pattern. (See Photograph 5) 7

- #10 19 Oxford Street - This 2½ story clapboard Classical Revival house with a facade gable (west) and with a 2 story pedimented dormer projecting from the center of the south side, both of which have Doric pilasters at their corners supporting a full entablature. The facade is 3 bays wide with a Palladian window in the pediment. The doorway is offset to the right and is flanked by sidelights. The one story porch which spans the width of the facade is supported by 4 Corinthian inspired jigsaw gingerbread columns. The section to the rear of the south dormer is apparently a later addition. (See Photograph 6) 8
- #11 Worcester New School (formerly Friend's Meeting House) Corner of Oxford and Chatham Streets - The 2 story red brick Neo-Gothic church with brownstone trim, which rests on a rusticated granite foundation, was built in 1908 on a cruciform plan with an apse and a rectangular appendage to the left of it on the west (rear). The front section of the building contains offices and classrooms on two floors. The 2 story meeting hall to the rear, is lighted by pairs of pointed gothic stained glass windows on either side of the buttressed outer walls, and comprises the longer leg of the cross.
- The gabled facade (west) end of the main axis of the cross (west-east), supported at its corners by buttresses, projects only a few feet beyond the buttressed flanking cross arms which form a major part of the facade. The deep set main portal, a wide, pointed semental arch in terra cotta, occupies in width and height most of the 1st story of the central section of the facade. Above the portal, centered in the recessed 2nd story wall, rise 3 pointed Gothic stained glass windows. A small rectangular window is centered just above them under the peak of the gable. The facade cross arms are not the same length and the window styles and placements are assymmetrical. (See Photograph 7) 9
- #15 1 Crown Street - This 2½ story clapboard ridge roof Greek Revival house, with simple pilasters at its corners supporting an entablature consisting of frieze, cornice and pediment is 3 bays wide with a single window in the pediment and the doorway offset to the right. The entrance is deeply recessed and surrounded by a wide flat moulding. First story and pediment windows are capped with pedimented lintels while for 2nd story windows, simple architrave lintels are used. On the south side of the roof a shed type dormer has been added. (See Photograph 8) 10
- #16 3 Crown Street - This 2½ story clapboard ridge roof Greek Revival house is 3 bays wide on the facade, with Doric pilasters at the corners supporting architrave, frieze and a wide roof cornice on the sides, although the facade (west) gable is not treated as a true pediment. The one story porch, which extends the width of the facade, is articulated as architrave, frieze and cornice supported originally by 4 Doric columns, one now missing. The framed doorway is offset to the left. The 1st

Page 4

floor facade windows are floor length, while the side windows, 2nd floor windows, and the single centered gable window are smaller. All are framed and are capped with simple architrave lintels. (See Photograph 9)

- #17 5 Crown Street - This 1½ story clapboard ridge roof Greek Revival house is 3 bays wide with Doric pilasters at the corners and a porch which spans the width of the facade, with architrave, dentil range, frieze and cornice supported by 4 Doric columns. The doorway, offset to the left, is flanked by unfluted Doric pilasters. The pair of windows to the right are floor length. A pair of smaller windows are centered in the roof gable. Pedimented lintels cap all windows. The roof gable is not treated as a pediment although the area above the pilasters and the cornice at the sides under the eaves are treated as architrave and frieze. (See Photograph 10)

- #18 7 Crown Street - This 2½ story clapboard ridge roof Greek Revival house with an ell to the left (south) is 3 bays wide with pilasters at the corners supporting a full entablature with a facade pediment. A pedimented one story portico, supported by 2 Doric columns and 2 Doric pilasters on either side of the doorway, shelters the entrance which is offset to the left. All windows on the facade, including the single pediment window, are the same size and are framed modestly and topped with simple architrave lintels. A one story, flat roofed porch, identical in style to the main portico, extends across the facade side of the ell. (See photograph 11)

- #26 2 Congress Street - This 2½ story Renaissance Revival clapboard house has a facade gable (south) a 2½ story gabled pavilion, which projects out several feet from the center of the west side, and a bay window on the east side. Both are ornamented at their corners with beveled wooden quoins. Under the eaves, around the sides of the structure run a frieze, dentil range, and handsome bracketed cornice. This same motif frames the roofline of the gables, turns to form angles at the corners of the gables, but is broken at their centers, leaving them without pediments.

The facade, which is 3 bays wide, contains 3 evenly spaced french doors on the ground floor, 3 smaller windows on the second floor, and 2 even smaller windows just under the peak of the gable. All are surrounded by simple Renaissance style rectangular moulded frames. The main entrance is in the west side, just in front of the pavilion, and is protected by a one story piazza articulated as architrave, frieze, dentil range and bracketed cornice, supported by square Doric-inspired pillars. This ample piazza, which is enclosed with large multipaned windows, runs from the western pavilion around the southwest corner of the house and extends across the facade, repeating the roofline motif on a smaller scale, thereby lending a pleasing rhythm to the structure as a whole. Rear sections of the building were apparently added later. A handsome, well preserved cast iron fence with gate, lines the sidewalk

in front of the house. (See Photograph 12)

#27 Pleasant Streed Baptist Church - The present structure, second church of this parish built on this site, was designed by Stephen C. Earle and completed in 1891. The three story red brick Romanesque church rests on a rusticated granite foundation and is on a cruciform plan with the main arm of the cross, accented by high gables, being east-west. The architect, however, was not constrained by traditional use of special elements. Towers at the south-east, south-west, and north-west corners contain the structure and each tower is different in size and design.

The principle south-east facade tower is highlighted by a gabled, arched, deeply recessed entrance. The bell tower on the south-west corner rises to a height of about 90' and contains a secondary entrance similar to the one previously described. The third tower, located at the north-west corner of the structure is less significant in all respects and provides a small service entrance. Fenestration is ample (leaded stained glass) and irregular and includes a Rose window (3rd story level) and triple arched windows (2nd story level) on the primary south facade. Small rectangular Terra cotta ornaments, spaced between the 2nd and 3rd story windows, add another element to the west and east facades.

STATEMENT OF SIGNIFICANCE

Near the center of downtown Worcester, the Oxford-Crown Historic District is significant not only as a section of the city distinguished by fine Greek Revival architecture, but also as historical evidence of an important part of the city's growth.

This section grew up during the 1840's and 1850's, as Worcester expanded during its transformation from a small agricultural town into a large industrial city, a result of the industrial revolution. At this time the city began to spread out from its center which then bordered Main Street and included only areas in very close proximity to Main Street.

Although numerous Greek Revival houses built during this period of expansion can still be found scattered throughout the city, the Greatest concentration of these houses is in the Oxford-Crown Historic District.

The District was one part of a tract of land owned by Major Daniel Ward. It extended from Main Street nearly to Newbury Street and from Pleasant Street nearly to Austin Street. Major Ward had built his house to the north of the present Barton Place about 1720 and had lived there for about 30 years when he sold the property to Sheriff Gardner Chandler for 326 Pounds. Sheriff Chandler erected his mansion on this property at the corner of Main Street and what is now Barton Place.

In 1818 this 30 acre tract of land was purchased for \$9,000 by Benjamin Butman from John Bush and his sons Jonas and Richard P. Bush. With the idea of developing the property, Butman had it surveyed by R. H. Eddy, an engineer of Boston. In 1836 Eddy prepared a subdivision plan (See Attachment A)

The section was to be known as "Park Hill". Apparently Butman's vision was that the area should become a gracious residential area because the lots shown on Eddy's plan were all unusually large for town or city lots, 80' x 150' or a total of 12,000 square feet.

A number of lots in "Park Hill" were sold for prices ranging from \$85.00 for a lot in the middle of High Street to \$260 for two lots sold to Isaac Davis between Park and Crown Streets facing the park. Only two lots were sold on Park Street and none on Crown Street.

When Butman's business failed following the panic of 1837, his various real estate holdings scattered about Worcester fell into other hands.

8 Statement of Significance

Page 2

"Park Hill" appears to have been broken up into numerous parcels, with Isaac Davis taking over the largest part.

At this time the original subdivision plan was abandoned. All the lots reduced in size, probably resulting in greater profits for the developer than under Butman's plan. The land originally designated as park land was sold off in separate lots of various sizes. The smaller lots and the lack of a master plan changed the character of the area from the proposed elegant, planned, residential area to a neighborhood of smaller, simpler homes owned by small businessmen and craftsmen and built by local carpenter-builders. These simple, well-balanced Greek Revival houses are the more modest, middle class counterparts of the larger, more imposing houses, such as the Salisbury House and the Tayler-Dowley Mansion, built in Worcester about the same time.

Today much of the Oxford-Crown neighborhood remains intact as it grew up in the 19th Century. The houses themselves are relatively unspoiled by additions, subtractions, or modern artificial siding. The area is still residential with most of the homes owner occupied. Because there are few buildings in the area built later than 1860 and because there is no encroachment by commercial and industrial building, the Oxford-Crown Historic District still has the quality of the era in which it was built.

BOUNDARY DESCRIPTION: OXFORD - CROWN HISTORIC DISTRICT

The following are scaled and only approximate bounds:

Beginning at a point on Pleasant Street and 40 ft. west of the westerly edge of Crown Street, S 4° W 118 ft. to the South edge of Congress Alley; N 88° W along said Alley 130 ft.; S 3° W 109 ft. to the northerly edge of Congress Street; S 85° E 65 ft. along Chatham Street; S 3° W 173 ft.; S 85° E 8 ft.; S 10° W 87 ft. to the northerly edge of Chatham Street; S 85° E 562 ft. along said northerly edge of Chatham Street; N 5° E 89 ft.; S 85° E 60 ft.; N 6° E 252 ft.; N 84° W 72 ft.; N 5° E 150 ft. to the southerly edge of Pleasant Street; N 84° W 147 ft.; N 6° E 126 ft. along the westerly edge of Ashland Street; N 84° W 120 ft.; N 6° E 30 ft.; N 84° W 70 ft.; N 6° E 38 ft.; N 84° W 70 ft.; S 6° W 198 ft.; N 84° W 72 ft. to the point of beginning, containing 7.5 acres, more or less.

Re: Oxford-Crown Historic District, Worcester

Dear Bill:

The information on the above district was submitted to you on August 20, 1975 by Francis J. McGrath, City Manager, City of Worcester, requesting a determination of eligibility for listing in the National Register. This certification occurred on September 26, 1975.

Since then, on November 5, 1975, the Massachusetts State Review Board has voted the district eligible. Would you please proceed with the conventional National Register listing based on the information already in your office. If there are any further steps for us to take, please let us know.

Sincerely yours,

Betty

December 1, 1975

Massachusetts Historical Commission
294 Washington Street
Boston, Massachusetts 02108

Dear Sirs:

The endeavors of the Worcester Historical Society have brought about a city-wide awareness of the beauty in the Oxford-Crown Historic District with its heritage in architecture. This has given Worcester residents as a whole a mental uplift, a meaningful direction toward pride. This furthermore has prompted property owners of the above historical area into ambitious efforts toward renewals, these always without exception jealously preserving its historical modes.

A few years back this area was destined for piecemeal destruction and demolition. This historical area residents and its tenants, together with the people of neighboring areas and in conjunction with other people of Worcester, made a concerted effort with the help of the Worcester Historical Society people, resulting in successfully barring demolition at its then proposed infancy.

I trust that the attached National Register proposal will be acted upon favorably to help Worcester attain this goal in preserving a beautiful heritage.

Sincerely,

Edward G. Schultz

Dec. 12, 1975

Mrs. Patricia Weslowski, Survey Director
Massachusetts Historical Commission
294 Washington Street
Boston, Massachusetts 02108

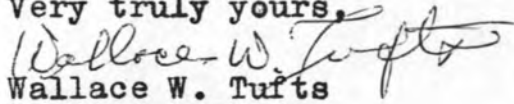

Dear Mrs. Weslowski:

I had planned some alterations in the building at 14 Crown Street, Worcester, Mass. However, I have been reluctant to do so as I did not wish to do anything to effect its Historical significance.

I am formulating plans for a retirement home in Maryland, therefore this property will be for sale.

I would be glad to discuss this property from the historical point of view with any member of your society, if you wish.

Very truly yours,

Wallace W. Tufts

MASS. HIST. COMM.

Gentlemen:

Re: Oxford-Crown (Worcester) Historic District

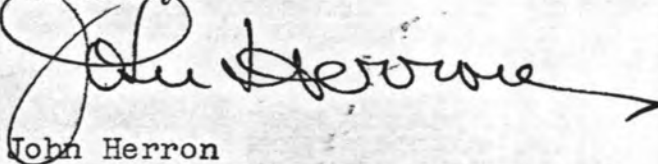

Worcester, founded in 1713, has little remaining of its 18th Century character. The earliest remaining period of cohesive design is the Greek Revival period indicated by the Oxford-Crown area, a group of moderately sized residences, roughly, 4 blocks from the City Common.

It has a potential of considerable charm, representing an attractive aspect of Worcester's heritage which is disappearing day by day.

An important part of the renovation program for the area is that it be made a pleasant environment for the present residents, to give them pride in themselves, and show what can be done with other, older residential sections, demonstrating possibilities available in urban living.

Register listing will give the area a certain caché which may encourage present residents, may make available some money for renovation, and give the whole city a "lift" as the project progresses. It will, also, give certain credibility to the people who have been fighting an up-hill battle to interest Worcester in its architectural heritage.

Sincerely

John Herron

Dear Bill:

In the proposed rules for procedures for National Register nominations published in the Federal Register in August, notification of district nominations was to include an opportunity for the presentation of written comments as to the district's significance.

Enclosed are copies of comments which have been received by our office concerning the Oxford-Crown District in Worcester, Massachusetts, recently reviewed by your office. You may wish to include these comments with the file.

Sincerely yours,

A handwritten signature in cursive script that reads "Judy".
