DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The district now being nominated to the National Register constitutes a rectangle bounded on the west by a line 602 feet west of the southwest corner of Section 22, T8N R15W; on the north by a line 1815 feet north of this corner; on the east by a line 1320 feet east of this corner; and the south by Nebraska highway 10 (which intersects with this corner).

The above district is located about a half mile south of the south bank of the Platte River and encloses an area of about 80 acres - - or only small fraction of the 100 square mile Fort Kearny Military Reservation, as established in 1848. The old east-west route of the Oregon Trail, no longer visible in this locality was situated directly north of this district. This district is believed to circumscribe the sites of all major structures erected at Fort Kearny between 1848 and 1871. Based on extensive archival and archeological research, an enclosed map of this district shows the approximate location of these structural sites. No buildings of the 1848-71 period - - nor even ruins of these former buildings - - survive today.

The first structures erected at Fort Kearny were temporary buildings erected in 1848 and included two sod stables, two living quarters, and an adobe warehouse. These structures were erected close to a four-acre, rectangular parade ground. Log structures were built in subsequent years, and the first frame buildings at the fort were erected in 1849-50: a small hospital and a handsome two-story officers' quarters. Detailed architectural plans, early photographs, and relatively undisturbed archeological remains still exist for this latter structure, revealing a building highly similar in design to "Old Bedlam," built ca. 1849 at Fort Laramie in Wyoming and still extant. It is believed that both buildings were designed under the direction of Lt. Daniel P. Woodbury, founder of Fort Kearny.

Between 1848 and 1871, some 30 to 35 buildings, excluding minor out-buildings, were erected at Fort Kearny. The majority of these structures were apparently frame structures. In addition, prompted by increased Indian hostilities in the vicinity, several earthwork fortifications were erected in 1864 outside the fort building complex. These earthworks, including a large rectangular fortification known as "Fort Mitchel," were never used because Fort Kearny was never attacked. Over the past century, a large portion of the remains of the fort building complex has been obliterated through road building and farming activities - - including virtually all remains located to the west of the parade grounds. By the late 1870's, much of this building complex had been converted by homesteaders into farmland. Fortunately, however, a 40-acre portion of this complex has apparently never been placed under cultivation and includes a wealth of relatively undisturbed archeological remains - - a circumstance which enhances the overall significance of Fort Kearny and its value as a site worthy of preservation.

In the 1920's the Fort Kearny Memorial Association acquired this 40-acre tract and offered it to the State of Nebraska. This offer was accepted

in 1929 by the state legislature, and the tract became a state park, now administered by the State Game and Parks Commission. Until recently, the lack of funds prevented development of the tract as a historic site. Although faint traces of early foundations, paths, pits, and mounds (most notably the Fort Mitchell earthwork outline) were still visible within this tract, so much physical evidence of the fort had disappeared that a visitor had difficulty visualizing the original appearance. But now this tract is in the process of redevelopment. The 1864 Fort Mitchell fortification was reconstructed in 1962-63, a replica of the 1865 sod blacksmith-carpenter shop was added in 1964-67, and finally a visitor center was built in 1967-68. Further development is planned. Through a cooperative agreement with the State Game and Parks Commission, extensive archeological and historical investigations of Fort Kearny were conducted in 1960, 1961, and 1964 by the Nebraska State Historical Society.

STATEMENT OF SIGNIFICANCE

Established along the Oregon Trail by the U. S. Army in 1848 and abandoned in 1871, Fort Kearny remained in existence for only a short period of time. Yet from 1849 to 1866, this military garrison stood as one of the most important outposts of civilization on the American frontier. During these seventeen years, no major battles were waged in the immediate Fort Kearny vicinity. Nor was Fort Kearny the largest military post in the West during this period. Rather its significance derives from its stature as a major hub of western transportation and communication during this period. It stood as a gateway to the hostile Great Plains and as a launching platform for overland travel to the Pacific coast and intermediate points. It was here that virtually all trails leading westward from the Missouri River steamboat towns to the Pacific coast converged to form a single superhighway - - including the routes westward from Independence, Leavenworth, St. Joseph, Nebraska City, Omaha, and other more minor routes. During the 1849-66 period, the vast majority of overland freighting and emigrant traffic destined for the Pacific Coast and intermediate points - - including the gold fields of California, Colorado, Montana, and Idaho - - converged at Fort Kearny. In contrast, only a fraction of this traffic passed through Independence, usually regarded as the eastern terminus of the Oregon Trail. All Pony Express traffic passed through Fort Kearny during the brief existence of this dramatic postal enterprise in 1860-61, and by 1865 stagecoaches operating out of Omaha, Atchison, and other Missouri River towns were stopping at Fort Kearny on a daily basis. Fort Kearny also served as a key station along America's first transcontinental telegraph line, completed in 1861, and as an important assembly point for numerous military expeditions during the Indian wars. The fort also helped keep peace between the warring Sioux and Pawnee Indians in the vicinity.

Primarily Fort Kearny's function was to provide protection and supplies to travelers on the Oregon Trail.

The establishment of Fort Kearny (or "New Fort Kearny") in 1848 constituted a relocation of short-lived Camp Kearny (or "Old Fort Kearny") to a point closer to the mainline of westward migration.

Abandoned in 1848, Camp Kearny had been established in 1846 by Col. Stephan Watts Kearny along the Missouri River on the present site of Nebraska City. Situated along the Platte River about 165 miles due west of Camp Kearny,

FORT KEARNY

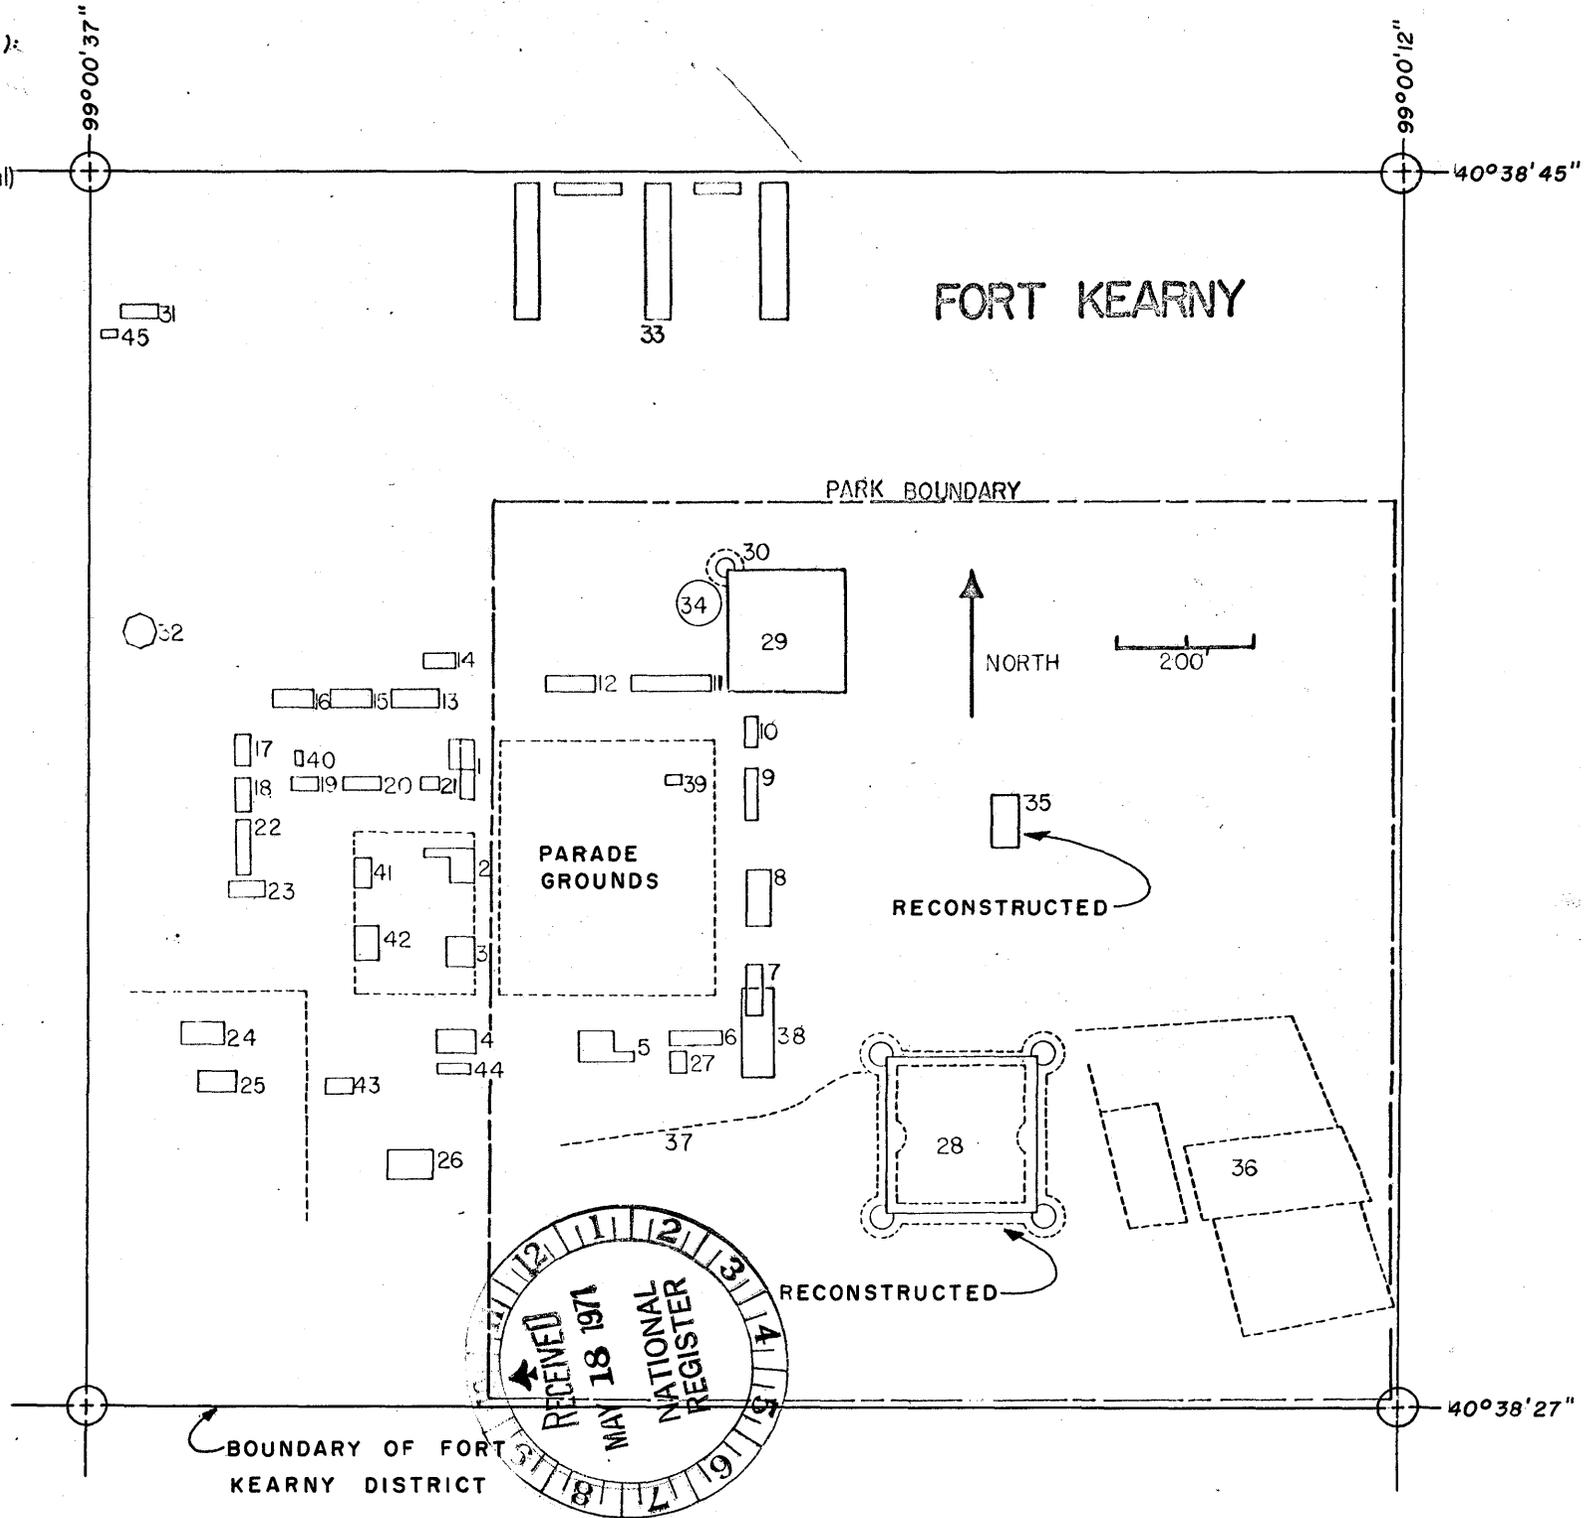

the Fort Kearny site was selected in September of 1847 by Lt. Daniel P. Woodbury of the U. S. Army Corps of Engineers. Although Woodbury initially referred to this new site as "Fort Childs," the site was officially named "Fort Kearny" in December of 1848. Under the direction of Woodbury, construction at Fort Kearny began in 1848. The following year Woodbury also became involved in the rebuilding of Fort Laramie, located in present-day Wyoming and acquired by the U. S. Army in 1849 - and thus the similarity of many buildings at the two posts. Forts Kearny and Laramie were the first of a series of military posts established in the mid-nineteenth century to protect the Oregon Trail.

The sudden increase in westward migration during and following the California Gold Rush of 1849 enhanced Fort Kearny's importance and stimulated it's accelerated growth. Fort Kearny's final wave of construction occurred in 1864-65 during a period of severe Indian depredations in the vicinity. Thereafter the usefulness of the fort declined rapidly. By the end of 1865, the principal Indian wars had shifted to the west and north - - away from Fort Kearny. Equally important, in 1866 the Union Pacific Railroad, constructed along the north bank of the Platte River, was extended to a point farther west than Fort Kearny, leaving the fort stranded on the south bank of the Platte and along a trail no longer traveled. Not long after Fort Kearny was abandoned in 1871, all above-ground building remains disappeared. Although the federal government salvaged many building materials for re-use elsewhere, many buildings soon rotted away through neglect.
