DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The dam was originally 220 feet long, 12 feet high and 13 feet thick, and constructed of native cobblestones placed in cement. The purpose of the dam was to control the flow of water down the bed of the San Diego River, which was dry during the summer season. The dam formed a lake, and a gate in the dam permitted the water to escape during the dry period. Because a considerable amount of water was lost in river sands, between the dam and the mission, a flume or aqueduct of tile two feet wide and one foot deep, resting on a bed of cobblestones and cement, was constructed to convey water from the dam to the Mission, some five miles distant.

By 1867 the dam and aqueduct were ruins. In 1874, or shortly thereafter, the dam was repaired and put back into use. A considerable portion of the dam stands and still backs up water in the valley. Nearly all traces of the aqueduct have vanished. In 1970 about twenty feet of the original tile flume was discovered in a clean-up operation below the dam, but it was too small and too distant to be easily related to the dam for purposes of interpretation.

In comparing the San Diego Mission irrigation system with similar sites in California, it should be noted that the Santa Barbara Mission system, built in 1806-1807, comprised of a dam, two stone reservoirs, a filter system, aqueducts, and fountain, has survived to a remarkable degree. The original remains of the Santa Barbara irrigation system are most impressive and other portions have been restored.

Unfortunately, all the ruins of the aqueduct of the Old mission Dam have been destroyed by vandals.

STATEMENT OF SIGNIFICANCE

The Old Mission Dam, with its aqueduct and flume extending about five miles to the Mission of San Diego de Alcala, was perhaps the first major irrigation-engineering project on the Pacific Coast of the United States. Water was impounded by the dam, near the head of Mission Gorge on the San Diego River, and released as needed for the fields around the mission and for milling and domestic use, thereby providing and assured supply throughout the year.

HISTORY

The San Diego de Alcala Mission, founded by Father Junipero Serra July 16, 1769 on Presidio Hill, was the first of the 21 California Missions. To remove the Indian neophytes from the corrupting influence of the soldiers and also to obtain a location affording more water for agricultural purposes, Serra moved Mission San Diego to its present location, on Friar Road, 6 miles northeast of San Diego, in 1774. On November 4, 1775 the 136 converts and other Indians rose in rebellion, destroyed the mission buildings and killed a friar and guards. New structures were erected 1776-1780, and by 1800 San Diego Mission, with 1,523 Indian neophytes, had become the most populous as well as one of the wealthiest of the 18 existing California missions. Damaged by an earthquake in 1803, the mission was again rebuilt, enlarged, and assumed its final form in 1813.

Research has not shown exactly when Old Mission Dam was commenced, but it was not likely before 1800, and was probably started in 1803, following the drought years of 1800-1802. The large irrigation system, however, had certainly assumed its final form by 1817.

Floods in 1821 and, presumably, other years did much damage to the dam, but the dam remains are still impressive and still impound a small amount of water.
