Architect/Builder: Not known

Building Materials: Log

Building Type/Style: Cabin

Description of physical appearance & significant architectural features:

(Include additions, alterations, ancillary structures, and landscaping if applicable)

This log cabin has a rectangular plan, being approximately 18' x 24'. There is a symmetrical three-bay facade and the windows are somewhat unusual because of their long and narrow shape. The cabin rests upon a black rubble rock foundation and has an unusually steep roof pitch. The gables are not infilled with log but are instead covered with verticle board and batton siding. The corners are secured with saddle notches and there is a c. 1900 frame lean-to on the rear portion of the cabin which is built with sawmill lumber. The interior displays plastered walls, board floors and a ceiling with old lathe and plaster. This interior was probably modernized to this condition c. 1900.

Behind the log cabin is a log granary, this one also having saddle notches and a steeply pitched roof. It has a full basement, lined with black rubble rock. The interior has been left rough and the log walls and log rafters are still visible.

Also on the property are several corrals and sheds, all in ruined condition. One of the sheds has roughly squared pink rock walls and a black rock foundation.

Only the log cabin itself is being considered in this nomination.

Statement of Historical Significance:

Construction Date:

This log cabin is significant because of its historic construction date, its log materials and its nearly unaltered appearance. The house successfully documents the small, single-cell plan found in Beaver during its first years of settlement. Such houses, while they continued to be used here well into the 20th Century, were common during the town's pioneer period and then quickly replaced with larger homes of stone and brick.
