DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Built in 1923, the Casa de Josefina is a twenty-five room mansion sitting atop a slight prominence to the east of, and overlooking Lake Amoret. While much of its lavish landscaping has disappeared, the building and the surrounding terrain have been little altered since the original construction. The style can best be characterized as Florida Boom, combining Italian, Spanish, Gothic and nondescript elements in an eclectic and theatrical display. In plan it resembles a vast inverted "E", 215 feet across its main facade with three wings reaching some 70 feet to the rear; the central entrance grouping is fronted by a wide terrace, and the two areas within the arms of the "E" are developed as courtyards. The predominant building material is tan-painted stucco over wood frame and metal lath, however, a great deal of cut cochina is utilized as well as occasional details of marble, granite, fieldstone, terra-cotta, wrought iron and wood. The building is set up on masonry foundation walls approximately 2½ feet in height, and while most of it is one story, some second and third story spaces are utilized, but primarily for effect. rambling wings of the house are tied together by a combination of flat, hipped and pent roofs, however most are masked by crenellated parapets; visible roof areas were covered in red barrel tile in the original.

The long wing on the south (main) facade was intended as the living area of the house. Its focal point was its large entry hall with fieldstone paving and two-story groined vaulting. The rest of the wing was occupied by living rooms, dining and billiard rooms, and studies. Each room opened to a wide, windowed corridor on the rear providing both view and access to the two courtyards. The wing on the west included kitchen, utility spaces, servants quarters and four-car garage; both the middle and east arms of the "E" were used for bedrooms. The courtyard on the west is paved and provided access to the garage and service areas, while the one on the east was landscaped as an interior garden with pools, fountains and statuary.

There are rich and unexpected decorative details everywhere, but architectural interest is concentrated at the central entrance grouping. A large terrace fronts the entrance; it has a low parapet wall of cochina, and where it joins the south wall of the house, it is clasped between two castellated towers. A two-story, central block rises above the main mass of the house and connects to the towers by rampart walks. The first floor is pierced by a series of semicircular arches which carry around three sides of the towers and down the main facade; most windows at the second story are flattopped. The main entrance door is located on the right side of the central block and recessed under a segmental arch; it has rusticated masonry surrounds topped off by a cartouche and scrolls. To the west of the door a pair of casement windows are set in a common surround with a pent hood above. Three elaborate stained-glass windows pierce

STATEMENT OF SIGNIFICANCE

The Casa de Josefina was the home of Irwin Arthur Yarnell (1876-1936), a Polk County banker and real estate developer important in the early growth of the Lake Wales area. Mr. Yarnell was born in Francesville, Indiana, and began his career in banking and real estate first in South Dakota and later in Minnesota. He first came to Florida as a visitor in 1907, and later returned to invest in, and develop, extensive properties at Crooked Lake, now Babson Park. One of his first concerted campaigns in building the Lake Wales region came when he interested members of the University of Minnesota faculty in buying a large tract of land for a botancial garden. The garden never materialized, but others began to hear of the Yarnell developments, and they became the object of increasing real estate speculation in the late teen's and early twenties. Yarnell was also responsible for establishing a French Canadian colony at what is now known as St. Anne's Shrine, located a few miles southeast of Lake Wales. His last and most ambitious development was Highland Park, originally a tract of some 3,000 acres organized in 1919. The community was structured as a private club with membership fees of \$500 per person. A ten acre citrus grove cost \$10,000 and the average price for a house site was \$1,000. Despite the inflated values, Yarnell's promotions attracted buyers. his death, Irwin Yarnell remained an important booster of the area and its burgeoning citrus industry. He was active in community affairs and noted for his acts of philanthropy.

The Casa de Josefina was built for, and named in honor of Yarnell's wife, Josephine. According to family tradition, conception of its design came primarily from Mrs. Yarnell. It was designed by Edward B. Stratton (1870 - ?), a Boston architect and former student of F.E. Kidder, and the contractor was L.S. Acuff, builder of most of the homes at Highland Park. The Casa de Josefina was the most elaborate of the several homes built at Highland Park and served as the unofficial community center. An undated description of an evening spent at the Casa gives a glimpse of the atmosphere that the Yarnell's were trying to create:

On a summery, moonlit night the Yarnells invited guests to a reading of Romeo and Juliet by an eminent professor from the University of Chicago. The Casa never looked more fairylike. Guitars played soft music, the fountains splashed in the moonlight,

Present and original physical appearance. (con't)

the second story. The central window has a semicircular arch springing from two engaged spiral columns; it is fronted by a decorative balcony with a curved, wrought iron railing, and the window mullions rise to pointed arches. Each of the flanking windows have two rectangular plates separated by an engaged spiral column, tile surrounds, and a projecting The crenellated parapet atop the central block projects slightly on corbels to give the appearance of machicolation. The towers to either side of the central block are similar in proportion, but the one on the east is more complex than its rectangular counterpart on the west. east tower is square in plan with chamfered corners. The arcaded porch at its first floor gives access to a spiral staircase leading to its second and third story levels. Each side of the second story is pierced by three loop windows. The chamfered corner stops short of the top of the second story and flares outward in a series of steps; the parapet above has machicolation, and the tower is crowned by a small octagonal turret with arched openings and a crenellated parapet.

There are pavilions, tower projections, arcaded porches and other devices at various points throughout the building, however, all are relatively plain when compared to the central entrance grouping. This rambling melange is given some cohesion by the continous battlements and the unifying effect of the plain stuccoed walls. Windows are of many varying sizes, shapes and types, and stained glass is used in abundance. The interiors in the bedroom wings are restrained, but those in the living wing (south) are highly textured and decorated in stone, wood and metal. European art objects, including Italian frescoes, Byzantine mosaics and statuary, were built into the house as were quite a few "antiques" of recent manufacture.

A small office and nursery house similar in styling, stood in the grove to the rear of the house, however these are slated for demolition. The only substantial alteration of the house was made in 1925 when the central entrance hall was opened up into a full two story height, eliminating the upstairs drawing room. The building is currently being renovated for use as a clubhouse and recreation center for an adjacent condominium development. Many landscape features are being restored and only minor alterations to the interior are planned.

Statement of Significance. (con't)

Japanese lanterns cast their bewitching light on the paths as tall, majestic trees swayed gently in the evening air.

It was the world of young lovers in Verona beneath an Italian night sky of centuries long gone. (Kaucher, p. 163).

Florida's history is speckled with grandiose schemes and plans, and none was more flamboyant than the dreams of the capitalists and developers of the 1920's. While there are certainly better examples of "Boom" architecture in Florida, the Casa de Josefina must rank with the more exuberant. The naivete of its styling reflects a period that sought elegance in the architectural cliches of an imagined past, and its opulence is a testament to what was done before the Bust, the Depression, and income tax.
