## Description

During the Railroad Era (1870-1914) in White County a variety of vernacular houses were constructed. They were also built out of a variety of materials. Surviving examples from this period, however, are somewhat limited. The Cremane House is a fine example of a two-story double-pile building that is of frame construction and clad with novelty siding. The bellcast roof is covered with composition shingles and the entire structure rests on either stone or concrete block piers.

Located on the south side of County Road 95 one-quarter mile east of County Road 232, this building was constructed less than one mile southeast of downtown Bradford. The Cremane House was constructed c. 1910 and is in good condition. Its main, or north elevation is dominated by a centrally placed two-story bellcast roof porch that is flanked by a one-story shed roof porch. The porch roof of the first floor is supported by brick columns on brick piers while the second-story roof is supported by wooden box columns that are adorned with simple capitals. The second story porch is also decorated with a wooden balustrade. Both porches are accessed by two single symmetrically placed doors.

First floor fenestration of the original building consists of symmetrically placed single windows. All, except for one, are one-over-one double-hung wood sash windows. The exception is a two-over-two double-hung wood sash window. Similar windows are symmetrically arranged on the second floor of the house. A corbelled brick chimney rises from the center of the structure. A two-story shed roof addition is attached to the south elevation of the original building.

The west elevation of the ground floor of this addition is fenestrated with a single centrally placed two-over-two double-hung wood sash window. A much smaller one-over-one double-hung aluminum sash window is located directly above this on the second floor. A single placed central door accesses the south elevation of the two-story addition; a single symmetrically placed one-over-one double-hung sash window is placed east of the door. This replaced a larger window. Symmetrically placed windows relieve the second floor of the addition's south elevation. The western opening houses a two-over-two double-hung wood sash window while the eastern opening plays host to a paired window that is covered; a similar window is found on the second floor of the east elevation. A paired single-pane sliding window is located directly below the previously mentioned window on the east elevation. Stretching across the entire south elevation of the two-story addition is a one-story shed roof porch that is in the process of being fully enclosed.

Approximately twenty yards southeast of the main house is a one-story gable roof storage building that was constructed at the same time as the house. The storage building is of frame construction and clad with novelty siding. The gable roof is covered with corrugated metal and the entire structure rests on a stone foundation. The lower portion of the main, or north elevation is relieved by a single asymmetrically placed door while the upper portion houses a centrally placed single-pane fixed frame window. A similar window is found in the same location on the south elevation of the structure. Single centrally placed two-over-two double-hung wood sash windows are found on both the east and west sides of the building. A large wooden door is located just south of the window on the west elevation of the structure.

**8. Statement of Significance**

Certifying official has considered the significance of this property in relation to other properties:

nationally     statewide     locally

Significance

The Cremanes raised grapes and operated a ginmill in the cellar; they bootlegged whiskey out of the storage shed located to the rear of the house. They also operated a sawmill that was located across the road to the north of the house.

Even though this house has had a rather colorful history it is being nominated under Criterion C with local significance because of its architectural integrity as a vernacular house type. When this house was constructed c. 1910, it was one of numerous double-pile buildings built during the Railroad Era (1870-1914). Vernacular two-story double-pile houses, however, were never very common in White County. Only four survive intact in the entire county and they do not exhibit the amount of integrity found in the Cremane House.

Verbal Boundary Description:

Beginning at a point formed by the intersection of the southern edge of County Road 95 with a perpendicular line running along the western elevation of the house, proceed southerly along said line to its intersection with a perpendicular line running along the southern elevation of the associated storage building; thence proceed easterly along said line to its intersection with a perpendicular line running along the eastern elevation of the storage building; thence proceed northerly along said line to its intersection with the southern edge of County Road 95; thence proceed westerly along said line to the point of beginning.

Boundary Justification:

This boundary includes all the property historically associated with this resource.

Reviewer's Comments

The boundaries of this property are presently located along building lines. A resource listed in the National Register should include all features of the property which contribute to its significance. In almost all cases this includes its historic setting. Page 77 of National Register Bulletin 16, Guidelines for Completing National Register of Historic Places Forms, states that "the boundaries of buildings should include the land surrounding the building, unless the lot occupied by the building contains no surrounding land as in the central business district of most cities."

Please revise the boundaries to include the property historically associated with the resource. If a portion of the original setting has lost its integrity, please explain.
