8. Statement of Significance

Applicable National Register Criteria

- A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B** Property is associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property has yielded, or is likely to yield information important in prehistory or history.

Areas of Significance

ENGINEERING

Period of Significance

1930

Significant Dates

1930

Criteria Considerations:

Property is:

- A** owned by a religious institution or used for religious purposes.
- B** removed from its original location.
- C** a birthplace or a grave.
- D** a cemetery.
- E** a reconstructed building, object, or structure.
- F** a commemorative property.
- G** less than 50 years of age or achieved significance within the past 50 years.

Significant Person(s)

N/A

Cultural Affiliation(s)

N/A

Architect/Builder

Virginia Bridge & Iron Company

Narrative Statement of Significance: see continuation sheet

9. Major Bibliographical References

Bibliography

Bridge Inventory, Office of State Aid Road Construction, Mississippi Department of Transportation

Previous documentation on file (NPS)

- preliminary determination of individual listing (36 CFR 67) has been requested.
- previously listed in the National Register
- previously determined eligible by the National Register
- designated a National Historic Landmark
- recorded by Historic American Buildings Survey

- recorded by Historic American Engineering Record

Fairchild's Creek Bridge
Natchez vicinity, Adams County, Mississippi

Narrative Description:

The Fairchild's Creek Bridge is located on County Road 555 in Adams County.

Built in 1930, it is a single-lane, single-span Parker through-truss bridge of steel construction, 151 feet in length and 18 feet in width, with a wooden deck.

The top chords of the structural truss consist of two channels and one plate connected underneath by small rectangular plates. The posts consist of two channels connected underneath by small rectangular plates, while the hip verticals consist of two angle bars. The bottom chords consist of two angle bars. The diagonals and the counters also consist of two angle bars. The metal truss span is supported beneath by wooden posts.

Although not regularly maintained, this bridge has not been altered nor has it been damaged.

Narrative Statement of Significance:

The Fairchild's Creek Bridge, built in 1930 by the Virginia Bridge & Iron Company, is locally significant under Criterion C in the area of Engineering, because it is one of only two surviving examples in Mississippi of a one-lane, single-span, wood-deck Parker through-truss bridge.

A comprehensive survey, conducted in 1986, of all known truss bridges in the state of Mississippi built before 1953 identified 10 surviving examples of the single-span Parker through-truss type built between about 1925 and 1930. Eight of these bridges were two-lane paved-deck bridges constructed for the earliest federal highways in Mississippi, while the other two were one-lane, wood-deck bridges built on rural roads. By the time these bridges were re-surveyed in 2002, six had been demolished or abandoned.

The Fairchild's Creek Bridge and the almost identical Valley of the Moon Bridge in Claiborne County are the only two surviving one-lane, single-span, wood-deck Parker through-truss bridges in Mississippi. Fairchild's Creek Bridge survives today as a well preserved example of its type of construction.

Verbal Boundary Description

This structure is located in the northwest quarter of Section 20, Township 9 North, Range 2 West, on County Road 555 in Adams County, Mississippi. It consists of an 18-foot by 151-foot truss bridge located at UTM coordinates 15-659780-3511040.

Boundary Justification:

The nominated property consists only of the steel truss bridge itself, which is significant as a representative example of its type of bridge construction.
