Item Number(s)

A "...departure from the ordinary type of farm barn..." according to W.E. Frudden in his June, 1915, <u>Building Age</u> article. The circular interior arrangement around the central clay tile silo had the advantage of "...a great saving of time when feeding stock;" twenty-one ground level and sixteen main level windows, and the rooftop cupola, allowed ventilation and plenty of sanitizing sunlight; the self-supporting, single hip gambrel roof provided for "...the greatest possible storage for hay;" asphalt shingles protected against fire hazard; and the round form, compared to the traditional rectangular form, required fewer materials, therefore less cost, for "...nearly the same cubical content." This was an innovative barn in the mid-1910s.

The supplier of the 10" thick structural clay blocks is unknown. As a dairy barn, the ground level of the Brooks Round Barn was built with twenty pipe stanchions facing a circular concrete manger. A feed alley surrounds the silo.
