Describe the present and original (if known) physical appearance

Located between Lake City and Johnsonville in rural Florence County, Browntown is an integrated complex of buildings constructed between the early nineteenth century and mid-twentieth century by members of the Brown family. Moses Brown and his descendants were self-sufficient farmers and operators of several agricultural industries. The area nominated contains the eleven extant Browntown buildings, including the cotton gin building, three residences, the school, a tobacco barn, and several outbuildings, covering approximately twenty-six acres. The property today is still in the hands of the Brown family; the fields are still cultivated.

The eleven buildings on the nominated property are:

1. Cotton Gin Building (early nineteenth century): a two-and-one-half story building, constructed of heart pine, designed to house the Brown's cotton gin and to provide for the transmission of horse-power to run the gin. The open first story houses a vertical axle, constructed of hickory and oak, with radiating wooden spokes to which horses or mules could be hitched. The animals would trudge through a circular path turning the axle and the large wooden gear at the top of the axle. The wooden teeth of this gear engage a smaller gear. Wheels attached to the axle of the smaller gear turned belts, which were connected to the cotton gin on the second floor. The building is constructed of hewn, braced timber with weatherboard sheathing. All of the main timber framing uses pegged mortise-and-tenon joints. The gable roof is covered with wooden shingles. The axle and gears of the ginning machinery are still operable, and the cotton gin is still in place, although it is not connected to the machinery.
2. Smokehouse (early nineteenth century): a one-story log building with a gabled roof extending forward over the entrance. The hewn logs of the walls have full dovetail joints. The logs are laid with open spacing between in order to facilitate the curing process of meats. The roof of the smokehouse is covered with wood shingles. One corner of this building is severely deteriorated.
3. Brown Family Residence (later nineteenth century): a two-story frame house with weatherboard siding and a gable roof. The house has been used for storage for years, but the central staircase, the balustrade, and some of the interior wainscoting are intact. Some of the windows have been closed over, but the sash is preserved inside the house. A scalloped frieze along the roofline is the prime decorative measure.
4. Schoolhouse (ca. 1900): a one-story frame building, sheathed in weatherboard, with a gable roof and a L-shaped plan. This building, originally used as a school house, was later renovated as a residence.
5. Tobacco Barn (mid-twentieth century): a two-story building of frame construction, covered with tar paper. The barn has a one-story porch and a gable roof. The gas-fired flue system is used to cure tobacco.
6. Early Cabin (mid-nineteenth century): a one-story frame building with a gable roof. The heavy timber frame is covered with weatherboard siding. One-half of the roof retains its wooden shingles; the other half is covered with sheet metal. A small shed was added to one side when the building was converted to storage facilities.

Statement of Significance (in one paragraph)

Browntown, located between Lake City and Johnsonville in rural Florence County, South Carolina, is a unique collection of buildings reflecting the self-sufficient way of life practiced by several generations of the Brown family during the nineteenth and early twentieth centuries. Moses Brown and his son and grandsons were self-sufficient farmers who operated their own brick kiln, grist mill, lumber mill, cotton gin, retail and wholesale mercantile business, and school. The property nominated contains the eleven remaining Browntown buildings, including the cotton gin building, three residences, the school, a tobacco barn, and several outbuildings. Architecturally, these buildings, which include examples of both log and frame construction, reflect the building technologies of the nineteenth and early twentieth centuries. In addition, the cotton gin building, which was built on the site, is significant in the field of engineering.

Additional Information

The origin of Browntown can be traced to 1768-69 and three royal grants to Moses Brown.¹ Moses' son Robert and Robert's sons were most responsible for the growth and development of Browntown by expanding the original land grants to more than 10,000 acres.² Browntown was an example of the extended family farming operations prevalent during the late nineteenth and early twentieth centuries. The Browns made use of the land, timber, and water resources to provide food, shelter, and an income for their families. To take the ultimate advantage of the natural resources the family constructed a brick kiln, a grist mill, a cotton gin, and a lumber mill. In addition Browntown had a school for family members and retail and wholesale businesses.³ The operations were so successful that surplus products were available for sale to surrounding residents.⁴ The Browns were able to incorporate the ideas of the industrial age with those of the agricultural age to establish an efficient, well run, and economically viable business.

Architecture: The buildings of Browntown are representative of the building technologies of the nineteenth and early twentieth centuries. The early twentieth century smokehouse, which has full dovetail joints in its log walls is an exceptional example of log construction. The cotton gin building is representative of the heavy timber braced-frame construction with hewn posts, girts, joists, and rafters joined with pegged mortise-and-tenon joints. The mid-nineteenth century cabin on the complex is also of braced-frame construction. Wooden shingle roofs are intact on several of the Browntown buildings. High quality craftsmanship is evident in the details of the joinery.

Engineering: The cotton gin building at Browntown retains the original draft animal-powered wooden machinery built to power the cotton gin. The vertical axle, the primary wheel with its wooden gear teeth, the secondary gear, and the secondary axle are still

Continuation sheet 1 Item number 7 Page 1

7. Tenant House (early twentieth century): a small, one-story frame building with a gable roof. The building has two rooms and a porch across its facade. The gable roof is covered with composition shingles.
8. Storage Outbuilding (early twentieth century): a small, one-story frame building, used to store small farming implements.
9. Outbuilding (late nineteenth century): a small, gable-roofed, frame building near the smokehouse with a shed-roofed addition to one side. The building is used for storage.
10. Outbuilding (twentieth century): a small frame building used for tool storage.
11. Outhouse (late nineteenth century): a small frame sanitation facility.

The buildings at Browntown are grouped in two complexes, one group adjacent to the road and the other across the fields around the cotton gin building. The rustic character of the frame buildings, the weathered wood, and the plowed fields establish a distinct rural character which unifies all the complex.

Surroundings: Browntown is surrounded by numerous small farming concerns, with vernacular farmhouses and tobacco barns abounding.

in working condition, although they are not now connected to the cotton gin in the second story of the building. The machinery, which was built on the site, represents an intelligent and competent adaptation of traditional technology and materials to solve a complex problem. ⁵

Although there has been no formal archeological investigation of the area included in the Browntown nomination, it is believed likely that such a search would prove fruitful. Documentary and physical evidence of additional structures as well as knowledge of long term occupation support this theory.
