Narrative Description

Villarán Bridge is in pedestrian use near kilometer 3, route 9959, on the edge of the traditional Canóvanas urban area. It is very well conserved (Photo 1). It crosses 15 feet above the Canóvanas River. Built in 1892, it consists of an Eiffel Truss in iron of a single span for a total length of 32.4 meters.

The truss ends are protected by rubble masonry pillars with edges, belts and buttress caps in brick; parapets of the same material project from the latter, forming balustrades for the access ramp. The hardly visible abutments are also of rubble masonry with vertical ashlar courses. The hand etched identification numbers for facilitating truss assembly are still visible. Its deck consists of joists and domed plates. This bridge has suffered no significant alterations since the period of significance. The setting has become more urban and traffic now crosses a new parallel bridge, but essentially it maintains its character. The bridge retains a high degree of integrity of design, workmanship, feeling, association and materials. A description of the structure follows:

span number:	single	construction date:	1892
span length:		superstructure:	iron
total length:	32.4 meters	substructure:	masonry and brick
roadway wdt.:	4.60 meters	current condition:	excellent

8. Statement of Significance

Applicable National Register Criteria

- <u>X</u> A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ____ B Property is associated with the lives of persons significant in our past.
- <u>X</u> C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ____ D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations

- _____A owned by a religious institution or used for religious purposes.
- _____B removed from its original location.
- ____ C a birthplace or a grave.
- ____ D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- ____ G less than 50 years of age or achieved significance within the past 50 years.

Narrative Statement of Significance

Villarán Bridge is the best preserved example of an Eiffel Pony Truss in Puerto Rico and in the jurisdiction of the United States. It was imported from Europe. Built in 1892 it embodies the distinctive characteristics of its type and method of construction. At the time of its construction it played an important role in transportation development, since it was part of the 19th century highway between Río Piedras and Río Grande.

For further contextual information regarding bridge building in Puerto Rico, registration requirements, and property types, see related multiple property listing "Historic Bridges of Puerto Rico".

Verbal Boundary Description

The nominated property is a rectangular shaped parcel measuring 32.4 X 4.60 meters, which is centered on the coordinates listed above. Included within this rectangular parcel are the bridge's superstructure, substructure and floor system.

Boundary Justification

The nominated structure includes the bridge's superstructure, substructure, floor system, any approach spans and the property on which they rest. These boundaries encompass, but not exceed, all of the property that has been historically associated with this bridge.
