Describe the present and original (if known) physical appearance

Located in the midst of Pine Bluff's historic fabric, the Fifth Avenue Historic District offers evidence of the impact of the city's emergence as a commercial and industrial center. This development is reflected in the built environment of Pine Bluff's residential areas. The district is at the southernmost end of a larger residential region (surveyed by the Southeast Arkansas Regional Commission during 1979-80 under the auspices of the Arkansas Historic Preservation Program) that is physically and historically related to Pine Bluff's downtown directly east, bounded on the north by Route 65 -- a major northwest/southeast roadway, on the west by Linden Street, and on the south by Sixth Avenue -a developing and encroaching commercial strip. Composed of broad streets platted in the 1850s on a flat expanse of land, this region reflects the typographic nature of the bluff for which the city is named, and is characteristic of this part of central Arkansas. Although the District is an intrinsic part of this larger scheme, its history, boundaries, and special character are graphically evident in the cityscape. The visual and historic continuity and integrity of the Fifth Avenue Historic District is striking. Its boundaries reinforce this. The tracks of the Missouri-Pacific Railroad which played a key role in the area's development form the district's northern boundary along Fourth Avenue. Although Sixth Avenue was once lined with fine early twentieth-century houses like those that comprise the Fifth Avenue Historic District, it is now the site of relatively modern commercial strip development defining a vivid southern boundary for the Historic District. The east and west boundaries of the Fifth Avenue Historic District provide a more subtle, though equally significant transition between the historic district and the surrounding fabric of Pine Bluff. To the west of the district, bounded by Poplar Street, are houses of a later period than that of the historic district's period of significance. Along the eastern border of the district, Laurel Street, the peripheral commercial development linked to the downtown begins to arise in the streetscape. Several houses along the east end of Fourth Avenue are not included for lack of architectural compatibility. The entire district, three and one-half blocks long -- one and one-half blocks wide, lies within the James Addition, annexed to the city of Pine Bluff on 2 January, 1854.

Twenty-eight buildings comprise the district. All but two, a carriage house and a multi-family dwelling, were constructed as single family residences. Today, the evolution of the neighborhood is reflected in deviations from traditional functional patterns. Fourteen houses retain the integrity of the single-family house, four have been converted to multi-family dwellings, five have been given to commercial use, and five houses are vacant. Most of the buildings are prominently sited on the Fourth and Fifth Avenue blocks. Although three vacant lots, representing the loss of some of the neighborhood's built resources, are included in the district, they are unobtrusive as a result of the siting of the district's residences on large lots with ample space between each structure. The quality and character of the relationship between houses and open space is one of the most appealing visual characteristics of the district.

PAGE

The majority of the buildings in the district were constructed during the period of greatest historic significance with 11 houses built before 1900 and eight built during the 1900-1915 period. Four houses were built between 1915 and 1930; only three have been constructed since 1930. The newest building in the district dates to 1938. The dates of construction have not been pinpointed for two structures but it is believed that they date to the 1915-1930 period. Nineteen structures (#'s 1,2,4,5,7,8,14,16,17,18,19,20,21,22,23,25,27,and 28) contribute to the character of the district by virtue of their historical associations, the contributions of their owners to the political and commercial development of Pine Bluff and, most important, their architectural character. (See individual descriptions for elaboration.) Of these, seven houses (#'s (3,7,8,14,16,17,18, and 28), especially outstanding in their fine architectural style and construction, are given the distinction "significant structure". The visual continuity of the district is enhanced by eight linking structures (#'s 3,6,10, 11,13,15,24, and 26). While these buildings do not possess those outstanding architectural or historical qualities that enhance the district by virtue of alterations to the original building fabric or recent construction dates, they retain the scale, proportions and land use patterns early established in the neighborhood and blend unobtrusively, even pleasantly, into the historic streetscape. Two structures (#'s 9 and 12) do not contribute to the district.

The buildings in the Fifth Avenue Historic District present a panorama of American residential architectural styles from those buildings that capture the essence of the Victorian period, the finest of which is the C.H. Triplett House (#37), to those that reflect the impact of a burgeoning modern style in their interpretation of the formal characteristics of the bungalow and prairie styles (#'s 19,20 and 22). In contrast, the Boone-Murphy-Moore House (#8) is one of the few structures in Pine Bluff that represents the architecture of the pre-Civil War period in the city. Two houses in the district, the Honnett-Barrow House (#14) and the M.A. Austin House (#28) are noteworthy as Queen Anne period houses altered in the early twentieth century to present a fine interpretation of the monumental and Classical Georgian Revival Style. While the streetscapes of the Fifth Avenue Historic District may well be dominated by stately examples of "high style" architecture, no less important are the surviving cottages (#1,2 and 5) that portray the parallel development of working class housing amidst the grander houses.

While many of the individual structures that comprise the Fifth Avenue Historic District are of architectural and historic interest, it is the continuity of scale and land use patterns in the neighborhood streetscape that is most impressive. This phenomenon renders the district a coherent unit. The area's tree-lined streets and the fine residences generously

PAGE 2

set back on ample lots that were built reflect the prosperity of the neighborhood and its inhabitants during the late nineteenth and early twentieth centuries and survive to maintain historic continuity and reinforce the imagery of the grandeur of the past. Individual descriptions of the houses that create this ambience follow.

Buildings contributing to the character of the district:

1. 916-920 West Fourth Avenue (c. 1896): 1 story L-shaped weatherboard cottage with 1 story addition to the rear; poured concrete foundation wall between brick piers; composition shingle cross gable roof with hip roof on the addition; 2 1-story porticos (apparently c. 1920s additions) consisting of gable roofs with exposed rafters supported by box columns on brick piers and unembellished entablature offer access to the building; corner boards articulated; attic vent with articulated hood mould appears in front gable; double-hung rectangular windows throughout, transoms in each of three doorways.

Although this structure has been slightly altered and converted to a two-family dwelling, it is a good surviving example of the worker's cottages constructed alongside the railroad tracks.

2. 914 West Fourth Avenue (c. 1920): $1\frac{1}{2}$ story single pile weatherboard cottage, brick foundation wall; overhanging composition shingle gable roof with exposed rafters; 1 story offset gable-roofed front porch (partially screened-in) supported by brick columns carrying an unembellished entablature, vertical wooden slats distinguish the porch-roof's gable; rectangular attic vent located in peak of front gable, above narrow seven-paned window centrally located front door flanked by double-hung window to the east and 3 double-hung one-over-one light windows set in a common frame to the west; double-hung rectangular windows of varying sizes throughout.

This house also ties into the pattern of development of workers' cottages fronting the railroad tracks. Excepting the brick porch columns which appear to be a later alteration and the screened area of the porch, the original fabric of the house retains a good deal of integrity.

4. 902 West Fourth Avenue -- The Ferguson-Abbot House (c. 1896): 2 story irregularly massed weatherboard late Queen Anne house; brick foundation walls; composition shingle hip roof with cross gable; corbeled brick chimneys; wrap-around hip-roofed front porch supported by box columns with Doric-like bases and capitals carrying a full but unembellished

3

entablature, small portico-like element with gable roof articulates the principal entrance; 2 second-floor balconies project above the porch roof, the north balcony features turned balusters and eliptical arch surrounded with spindle work; dormers with vents and fan-like decoration in gable peak appear on north and east elevations; decorative bargeboard in southeast gable cornice moulding, corner boards and imbricated shingles; northwest gable has returns; single and paired double-hung one-over-one light windows throughout; transom and multi-paned side lights in each of two (north and east) doorways. Interior features include decorative mantels and wood work; paneled central stairway with ornate newel post.

Already individually listed on the National Register, the Ferguson-Abbot house is a fine example of the architecture of the late nineteenth century. Its ornate trim and rich variety of forms and textures exhibit the characteristics of the Queen Anne style at the height of its popularity in this area.

SIGNIFICANT STRUCTURE

5. 818 West Fourth Avenue (c. 1910): 1 story single pile weather board cottage with 1- story addition and ell to the rear; brick foundation wall; steep overhanging pressed tin hip roof with exposed wooden rafters; shed roof on the addition; corbeled brick chimneys; 1 story hip roofed porch (part of which has been enclosed to provide a secondary entrance) supported on wrought iron posts extends across principal facade; corner boards articulated; hexagon bay window in west elevation; double-hung twelve-over-one light windows in principal elevation appear to be original, remainder of windows are one-over-one light double-hung; transom in principal entrance doorway.

Another worker's cottage altered to accommodate multi-family use. It is a good example of its type and as such contributes to the streetscape along the railroad tracks.

7. 404 Oak Street -- The C.H. Triplett House (1886): 2 story irregularly massed weatherboard Queen Anne house with 2 story 1 bay and 1 story garage /porte cochere additions to the rear; brick pier foundation; composition shingle hip roof with multiple cross gables; overhanging gables have boxed returns and decorative bargeboards; 1 story hip roofed entry porch supported on Ionic columns carrying a bracketed entablature connects the two projecting half-hexagon corner bays of the north elevation; 1 story shed-roofed porch surmounted by flat-roofed second-floor balcony both supported on Ionic columns distinguish the east elevation, porch

columns support a full but unembellished entablature capped with a box cornice, and a bracketed entablature terminating in an overhanging box cornice caps the balcony; bracketed entablature carrying box cornice caps the building; abundant decorative woodwork including panels, triangular-pedimented cornice moulding above north windows, paneled pilasters articulating corners of bays, imbricated shingles and weatherboard set in a herring-bone pattern; prominent mouldings around all doorways; double-hung one-over-one light rectangular windows throughout; half-hexagon shaped transoms in front and side (east and north) doorways, transom in balcony doorway.

Built by Chester Triplett, a prominent member of one of Pine Bluff's founding families, this house is among the older buildings in the district and perhaps, the most architecturally eminent. Its stately proportions, exciting juxtaposition of architectural forms, and beautifully crafted decorative woodwork capture the essence of the Queen Anne style.

SIGNIFICANT STRUCTURE

8. 714 West Fourth Avenue -- The Boone-Murphy-Moore House (pre 1861); 1 story single pile weatherboard house with 1-story additions to the east and west; raised slightly above grade on concrete pier foundation (alteration); tin shingle gable roof with shed roofs on the additions; one story flat-roofed porches with turned posts and sawn brackets flank the building on the northeast and northwest corners; corner boards and cornice moulding articulated on principal elevation, oculus-shaped vent in gable; decorative bargeboard with central pendant and iron roof cresting (both added c. 1880); various size double hung one-over-one light windows throughout.

Originally located at 702 West Second Avenue, Pine Bluff, the Boone-Murphy-Moore House, listed individually on the National Register, attained its principal significance between 1861 and 1865 when it served as the second headquarters of the Union Army during the occupation of the town. Architecturally austere and representative of the early settlement of the city, it is one of Pine Bluff's oldest extant structures.

SIGNIFICANT STRUCTURE

14. 817 West Fifth Avenue -- The Honnett-Barrow House (1894, altered to present condition 1913): 2 story irregularly massed weatherboard Queen Anne House altered to Georgian Revival style with one-story addition to

GE 5

the east; brick foundation wall; composition shingle hip roof with cross gable and shed roof on the addition. Cupola rises above south elevation, onion dome above west elevation; monumental two-story portico supported on colossal order of Ionic columns carrying full but unembellished entablature with overhanging box cornice, wraps around the principal (south) facade to the west elevation projecting on west side to articulate secondary entrance; portico encompasses first floor porch and second floor balcony (part of which is screened in) both supported on Ionic columns carrying full entablatures articulated in the same fashion and detail as that of the portico; balcony balustrade has turned balusters, addition has small porch supported on Ionic-like columns; decorative wood work includes imbricated shingles on frontal gable and panels below gable line; prominent arched window mould surrounding one tall double double-hung rectangular window flanked by two smaller double-hung rectangular windows surmounted by segmental transom-like windows in projecting arm of principal elevation, round arched window divided into three stationary panes in front gable; double-hung one-over-one light and four-over-one light rectangular windows throughout, some having transoms; principal entrance consists of paneled wood double-doors with windows, transoms in secondary entrance and balcony doorways.

The Honnett-Barrow House exemplifies a structure whose esthetic appearance has evolved to reflect the caprices of "style". During the last years of the nineteenth century and first years of the twentieth century, styles rapidly rose and fell in popularity as this Queen Anne house marked by the Classical elements of the Georgian Revival documents. Though some of the house's original fabric is evident, it is the later monumental portico that vests this structure with much of its fine esthetic character.

SIGNIFICANT STRUCTURE

16. 713 West Fifth Avenue -- The Gans-Bluthenthal House (1884, altered 1894 and 1915): 2 story irregularly massed weatherboard house with 2-story addition and ell to the rear; brick foundation wall; composition shingle hip roof with cross gables, hip roof on the addition with shed roof on the ell; 1-story shed-roofed offset front porch (probably constructed between 1920 and 1930) wraps around to the east elevation where it is partially screened-in; tower rises above the southeast corner of the house; much of the building's original decorative woodwork has been lost but imbricated shingles cover the tower and an unembellished entablature forms a cornice moulding; decorative wood panels appear on the west elevation; large rectangular window set between pilasters and flanked by sidelights in first floor front gable; double-hung one-over-one light

rectangular windows, transom and double door in principal entrance.

Although a series of alterations have dramatically changed the Gans-Bluthenthal house, its size, scale and siting reflect the architecture and land use patterns in the district at a formative period. It is worthwhile to briefly trace the evolution of this building's design. Constructed as the Trinity Episcopal Church Rectory, the Gans-Bluthenthal house was a one-story structure embellished with abundant decorative woodwork including bargeboard in the principal gable, turned columns with brackets supporting the front porch, spindle frieze, and numerous finials. Originally, the tower had cathedral lights and the roof decorative cresting. The present vertical silhouette of the house dates to c. 1915 when it was enlarged to provide a second story. Although the second story followed closely the plan of the original first floor, the pitch of the roof's gables was made less steep in reconstruction and the tower height increased proportionate to the building's new vertical dimensions. The form of the tower face was also altered and its cathedral lights removed. Much of the interior millwork, including decorative elements on the first floor, remains intact.

SIGNIFICANT_STRUCTURE

17. 617 West Fifth Avenue -- The Peter Paul Byrd House (1899-1901): story essentially symmetrical pressed brick veneer house; rusticated stone (granite) foundation wall with smooth stone banding articulating water table line; shingled hip roof; prominent corbeled brick chimney; one story flat-roofed front porch supported on fluted Doric columns and brick cornice columns on rusticated stone piers carrying full though unembellished entablatures terminating in a box cornice, two-story (west) side porch (entire second story and part of first floor have been enclosed in wood sheathing penetrated by double hung rectangular windows) exhibits same combination of Doric wood columns and brick columns on rusticated stone piers as on principal facade, terminates in box cornice; corners of house articulated by brick pilasters with stone bases and Ionic capitals; brick and stone entablature articulated with projecting brick course defining architrave and prominent overhanging box cornice caps the building; one centered gable-roofed dormer with arch-shaped window penetrating pediment between gable returns and three windows separated by fluted pilasters penetrates roof at front elevation, two additional dormers with round arched roofs embellished with fan design and finials, fluted pilasters and encircling cornice appear on the west elevation; lintels and windowsills articulated in stone; transom and sidelights articulated with fluted Doric pilaster and console in principal entrance doorway.

ITEM NUMBER

7 PAGE 7

The Peter Paul Byrd House reflects an early interest in the Colonial Revival style. Its pressed brick facades and massive proportions exert a stately presence on the Fifth Avenue streetscape. The quality of craftsmanship exhibited in its brick work, stone work, fluted columns and pilasters and dormers are noteworthy and enhance the inherent Classicism of the Colonial Revival esthetic.

SIGNIFICANT STRUCTURE

18. 609 West Fifth Avenue (c. 1894, altered to present condition c. 1917): $1\frac{1}{2}$ story irregularly massed brick house with stone porte cochere and one-story addition to the rear; steep overhanging red tile gable roof with cross gable roof with cross gable and parallel gable over porte cochere, wood rafters articulated; 1 story front porch (now screened) offset to the east capped with concrete coping and carried on stone columns; second story gable ends stuccoed with wood frame exposed to create half-timber effect; brackets articulated under gable-end overhang.

While the building's sweeping red tile roof, stone porch, and appealing stucco and timber work completely obscure its 1894 fabric and character, they contribute greatly to the development of a twentieth-century esthetic. The house's appeal draws upon the Prairie style and bungalow style that probably influenced its design. Sensitive handling of materials, scale, and siting add to the historic ambience of the area.

19. 918 West Fifth Avenue (c. 1915): $1\frac{1}{2}$ story brick cottage, poured concrete foundation wall; composition shingle cross gable roof, wood rafters articulated; 1 story brick front porch (now completely screened in) offset to the west and carried on brick piers, gable ends stuccoed with wood frame exposed and brackets articulated to create half-timber effect; concrete string course at window sill line; double-hung windows through front.

Somewhat influenced by the development of the bungalow, this building complements the historic character of the area in scale and siting while establishing a "modern" twentieth-century statement in the neighborhood.

20. 916 West Fifth Avenue (c. - 1920): 1½ story brick house, poured concrete foundation wall; overhanging red tile gable roof with wood rafters exposed; 1 story gable-roofed brick front porch offset to the west capped with concrete coping and supported by brick columns with concrete capitals and bases articulated, terminating in porte cochere;

PAGE 8

brackets articulated under gable end overhang; shed-roofed dormer comprised of four windows divided into nine panes; casement and double-hung windows; sidelights in principal entrance doorway; projecting gables over secondary (side) entrances.

The prairie, Bungalow and craftsman influences that contribute to the character of this structure continue the land use patterns of the residential Fifth Avenue streetscape and offer a pleasing interpretation of the esthetics that attained prominence early in the Twentieth century as evidence of a developing "modern" architecture.

21. 908-910 W. Fifth Street (c. 1912-13): $1\frac{1}{2}$ story weatherboard late Colonial Revival-influenced house with two story addition to the rear; brick foundation wall; pressed tin hip roof with cross gable and hip roof on the addition; 1 story shed-roofed brick front porch with concrete coping carried on brick columns and wrought iron colonettes carrying unembellished entablature wraps around to the east (porch has been greatly altered); hip-roofed square tower set diagonal to the north/south axis of the building rises above northeast corner of the building, tower has decorative wood shingles, half oculus in gable end; corner boards and cornice moulding articulated; double-hung one-over-one light rectangular windows.

Though this structure has been altered (the change in the porch is regrettable) its late Colonial Revival influence is still apparent in its hip roof, simple yet stately massing and most significantly in the delineation of its principal facade. The tower, though not intrinsically related to that style, is an intriguing element. It also serves as a definitive visual link reinforcing the relationship between the later buildings around it on the block and those earlier Queen Anne and Classically influenced buildings elsewhere in the area.

22. 902 West Fifth Avenue (c. 1913): $2\frac{1}{2}$ story brick house with one story addition to the rear; poured concrete foundation wall; overhanging red tile gambrel roof with wood rafters and brackets articulated; 1 story red-tile to create half-timber effect; casement and double-hung windows; windows sills articulated; transom and sidelights in new front door.

Another of the Craftsman and Prairie style influenced twentieth-century structures that perpetuate and enhance the esthetic and spatial quality of the streetscape in the district.

ITEM NUMBER 7

PAGE 9

23. 816-820 West Fifth Avenue (191908): 2 story irregularly massed weatherboard Colonial-Revival house; brick foundation wall; composition shingle hip roof with cross hips; 1 story hip roofed porch wraps around to the west supported on Doric columns carrying full though unembellished entablature terminating in a box cornice, horizontal board balustrade (apparently not original); exposed brick chimney on east elevation; corner boards articulated, unembellished entablature terminating in overhanging box cornice caps the building; double-hung one-over-one light rectangular windows predominant; Classically detailed window surrounds; transoms in doorways.

This building's stately proportions and fine details, especially its Doric columns and prominent box cornices, indicate that it must have been an outstanding Colonial Revival, primarily Georgian influenced, house. The minor alteration of the porch and transformation of the house into a multi-family dwelling detract from, but do not obscure its historic fabric.

25. 808-810 West Fifth (c.1896, altered to present condition c. 1920s): 2 story stucco house with 1 story addition to the rear and 1 story addition to the west (perhaps part of an original porch that has been enclosed; poured concrete foundation wall; composition shingle gable and hip roof with shed roof on the addition; wood rafters articulated; 1 story front entry porch on brick columns surmounted by second floor screened balcony with corner wood box columns (apparently original); stucco in gable ends and in principal facade has been treated with wood frame exposed and brackets articulated; wood cornice mould articulated; principal elevation features slightly projecting windows throughout; transoms in principal entrance doorway.

Although stucco covers much of building's original Queen Anne fabric and it has been converted to a two family dwelling, it retains those basic proportions and formal relationships of building mass that characterize the original style. The survival of the balcony's box columns is revealing; it seems likely that at least the first floor of the front porch originally wrapped around to the west. In addition to exhibiting the historic scale and siting that largely determine the visual quality of the area, this house documents the physical evolution of the neighborhood in the twentieth-century as its interest in "modernism" progressed.

27. 712 West Fifth Avenue (c. 1890's): 2 story essentially single pile weatherboard house with 2 story addition to the rear; brick foundation wall; composition shingle hip roof with cross gambrel and cross gable,

shed roof on the addition; corbeled brick chimneys, 2 story hip-roofed front porch offset to the east has been enclosed with horizontal weatherboard; 2 projecting hip-roofed 1 story window bays on principal elevation may well have originally been part of the porch; corner boards, base moulding and cornice moulding articulated; box cornice caps building; double-hung six-over-six light rectangular windows in principal facade and east elevation appear to be original remainder of double-hung one-over-one lights.

Although the principal elevation's porch has been extensively altered to accommodate the structure's present commercial use, this building retains the scale proportions, materials and siting characteristic of the area's period of historic significance.

28. 704 West Fifth Avenue - The M.A. Austin House, now Colonial Steak House (c. 1870, altered to present condition 1904): 2 story irregularly massed weatherboard Queen Anne house altered to Georgian Revival style; brick foundation wall; composition shingle hip roof with cross gable; principal elevation features monumental 2-story flat-roofed portico offset to the west and wrapping around to the west elevation, turning the corner with a semicircular element (in plan as well as elevation), supported on a colossal Ionic order carrying a full entablature with dentiled frieze and prominent overhanging dentiled box cornice, portico encompasses first floor porch whose design in plan and detail echoes that of the monumental portico and second floor balcony with Classical turned-balustrade; 1 story flat-roofed projecting portico on east elevation supported by Ionic columns carrying full entablature with dentiled frieze capped with box cornice articulates secondary entrance; other decorative woodwork includes full dentiled entablature with box cornice that caps building's west, north and east facades; articulated corner boards and base moulding, and dentiled lintels, panels, and engaged Ionic colonettes in principal elevation windows; front gable end has boxed return, dentiling and fan-light window, projecting gable bay features first floor tripartite window consisting of wide central windows with transom flanked by narrow double-hung windows; double-hung oneover-one lights; beveled glass transom and oval sidelights in principal entrance doorway; paneled wood door with oval light.

Like the Honnett-Barrow House, the M.A. Austin House exemplifies the evolution of a Queen Anne style house into a fine Georgian Revival residence (now functioning as a restaurant) as stylistic references change at the outset of the twentieth century. Here too, it is the later period that vests the structure with its outstanding esthetic character.

SIGNIFICANT STRUCTURE

Buildings contributing to the character of the district by linking key elements:

- 3. 912 West Fourth Avenue (c. 1896, altered): 1 story single pile weatherboard cottage with 1 story addition (originally a porch) to the front; brick foundation wall; composition shingle hip roof with wood rafters articulated; gable-roofed brick front porch addition on brick piers with concrete coping centrally located on principal facade has been completely screened-in, horizontal weatherboard infill in gable end, six-pane square window is blocked in; double-hung one-over-one light rectangular windows throughout.
- b. 812 West Fourth Street (c. 1920): 1 story brick house; composition shingle cross gable roof with wood rafters articulated, brick chimney articulated on exterior west wall; 1 story brick front porch with concrete coping supported on brick piers with concrete coping under continuous cross gable of house roof; gable ends stuccoed with wood frame and brackets articulated on exterior west wall; 1 story brick front porch with concrete coping supported on brick piers with concrete coping under continuous cross gable of house roof; gable ends stuccoed with wood frame and brackets; articulated attic windows; double-hung rectangular windows throughout.
- 10. 410 Oak Street (c. 1949): 1 story L-shaped brick house; composition shingle cross gable roof with wood rafters articulated; 1 story brick porch (completely screened in) offset to the north under continuous iron gable of house roof carried on square brick piers with concrete coping; principal elevation gable stuccoed with wood frame attic window articulated.
- 11. 415 Elm Street (date of construction undetermined): 2 story single pile undistinguished but unobtrusive weatherboard house; composition shingle gable roof; second floor cross gable-roofed balcony (completely screened) projects from center of principal elevation; corner boards articulated; attic vents in peaks of gable ends; double hung one-over-one light windows throughout.
- 13. 903 West Fifth Avenue (c. 1910): 2 story single pile weatherboard and shingle house with 1 story addition to the rear; brick foundation wall; composition shingle hip roof with hip roofs on the addition; 1 story hip-roofed front entry porch enclosed offset to the west; half-hexagon hip-roofed bay window on the east elevation; base moulding

articulated at first and second floors; central hip-roofed dormer; essentially Classical window moulding; casement and double hung windows; double-hung eight-over-one light and nine-over-one light windows predominate.

Once a fine Colonial Revival structure, the house has undergone a number of detrimental alterations. The shingles that cover the second floor facade are not original. The absence of a full porch is distressing, although it is likely that extant entry addition was part of a porch more characteristic of the period.

15. 715 West Fifth Avenue (c. 1937): 1½ story single pile brick house with 1 story addition to the rear; brick foundations; composition shingle gable roof with parallel gable roof on the addition; 1 story front entry portico supported on pairs of Tuscan-like columns carrying full but unembellished entablature, portico terminates with engaged box columns that flank principal entrance, gable roof with box returns caps portico; box cornice forms gable returns on side elevations and breaks in triangular pediment form to articulate entrance in addition; 2 gable-roofed dormers in principal elevation with six-over-six-light double-hung windows; oculus window and attic vents articulated in gable-ends of side elevations; double-hung rectangular windows throughout with six-over-six light windows in principal elevation; fanlight transom in principal entrance doorway.

Although relatively new, this is an excellent though modest period house whose Colonial Revival inspired design adds considerably to the streetscape and land use patterns in the area.

- 24. 812-814 West Fifth Avenue (c. 1938): $1\frac{1}{2}$ story horizontal wood siding duplex; brick foundation wall; steep gable roof with cross gables; centrally situated brick chimney; bell-cast gable-roofed entry vestibules project from northeast and northwest corners of principal elevation; attic vents in round-arched mouldings in gable ends; pairs of double-hung six-over-six light rectangular windows in principal elevation; principal entrances set in round-arched surrounds with fan designed wood panel in transom area.
- 26. 802 West Fifth Avenue (1922): 2 story single pile horizontal wood siding house, brick foundation shingles gambrel roof terminating in a hip-like projection at the first-floor level; principal entrance articulated with gable with arch cut into the pediment supported on two round piers; symmetrical delineation of principal elevation.

Buildings that do not contribute to the character of the district:

- 9. 416 Elm Street (construction date undetermined): 1 story single pile weatherboard house; concrete foundation; shingled gable roof with wood rafters articulated; attic vents in gable ends; gable on wood brackets projects to define principal (east) elevation.
- 12. 909 West Fifth Avenue -- The Atwood-Moore House (c. 1900, altered to present condition c. 1960s): 1 story ell-shaped horizontal wood siding and brick house with porte-cochere (contemporary carport) addition to the west; shingled hip roof with cross gable; shed-roofed front porch has been bricked-in; box cornice caps building and forms returns on front gable; projecting front gable end faced with contemporary decorative clapboard in imitation of half-timber design; some original decorative woodwork including bell cast window hood-mould with spindle brackets and pendants and turned columns with spindled brackets and turned freize that articulate principal entrance retained but unsensitively juxtaposed against new fabric.

Statement of Significance (in one paragraph)

Summation

Perhaps more than any other residential area in Pine Bluff, the Fifth Avenue Historic District represents a continuum of the city's history. As such, it captures a period of prime importance in the city's development -that era between 1880 and 1915 when Pine Bluff emerged as a commercial and industrial center and enjoyed its greatest prosperity. This development was fostered by Pine Bluff's preeminence as a railroad center in Arkansas. As the railroad generated commercial and industrial expansion, it transformed the size and appearance of the city. This change is manifested in the Fifth Avenue Historic District. With the city's economic success developed an upper-middle class, many of whom resided in the Fifth Avenue Historic District, an area convenient to both the downtown business district and the railroad. The names of those early inhabitants of the district are intrinsically linked to Pine Bluff's commercial and industrial growth and history during its heyday. An architectural heritage befitting the new and successful merchant class also developed between 1880 and 1915 that characterizesthe Fifth Avenue Historic District to this day. A concentration of 28 residential structures comprises the district, depicting a progression of fine architectural design from cottages and grand houses of the late Victorian period, to the Classicism of the early twentieth century, to the forms that herald the onset of the modern movement in American architecture. Moreover, each building in the Fifth Avenue Historic District is part of a visually rich, spacious and contiguous streetscape.

Elaboration

Since its incorporation in 1839 Pine Bluff has grown southward, away from the Arkansas River. The Fifth Avenue Historic District, originally part of the James Addition -- an area south of the 1839 city limits which was platted in the early 1850s -- ties into this broad pattern of development. Pine Bluff's growth proceeded slowly until after the Civil War and well into the post-war period, there was no construction in the James Addition.

As late as 1880, Pine Bluff was a town of 3,000, an agricultural community economically dependent on the local cotton crop. The Arkansas River offered the only means for transporting the crop, but the river's eratic patterns made it difficult and unpredictable to navigate. The year 1880 proved critical in the city's development, that year Pine Bluff was connected by rail to Little Rock, the capitol of Arkansas. During the

decade that followed, two additional rail lines connected Pine Bluff to the cotton rich fields of Arkansas to the southeast and to the flourishing ports of the Mississippi to the east. As a result of this proximity to the rails, Pine Bluff became a major cotton processing and shipping center, boasting the second largest inland cotton warehouse in the United States and the world's largest cotton compressor. Soon, more industry was attracted to the city.

The Cotton Belt Railroad located its repair and construction shops in the city and thus became a major employer of local labor. In the early 1900s the lumber industry, taking advantage of south Arkansas' vast supply of hardwood, also began to thrive in Pine Bluff.

For a period of more than twenty years, Pine Bluff's economy flourished. By 1903 it had become the trade center of an eleven county section of southeast Arkansas with annual retail sales amounting to \$15,000,000. Although the city's growth and development boom leveled off after 1915, the period of great prosperity saw Pine Bluff become the state's third largest city as its population swelled to over 20,000.

During its 1880-1915 heyday, fine residential areas developed in Pine Bluff that paralleled and reflected the city's commercial and industrial success. Fourth Avenue arose as a fine residential street in the 1880s with Fifth Avenue emerging as the most desirable residential location a decade later. The Fifth Avenue Historic District is the last surviving section of this larger neighborhood settled in this area of the last decades of the nineteenth century and the early part of the twentieth century. Twenty structures in the District were built when the two streets together were heralded as the most exclusive blocks in Pine Bluff. The visual integrity and historic continuity of the area remains and is captured within the historic district's boundaries.

It is ironic that Fourth Avenue developed as a premier residential street. In 1880, it was the widest street in the city and as such, a logical choice for the right-of-way of Pine Bluff's first railroad. Nonetheless, it also was the site of the construction of an intermingling of small cottages and fine homes. Two of the district's outstanding Queen Anne houses, the Charles Triplett House of 1886 (#7) which fronts Fourth Avenue despite its 404 Oak Street address and the Calvin M. Ferguson House of 1887 (#4) at 902 West Fourth Avenue, vest the throughfare

PAGE 2

with an elegant character. Their owners' prominence in Pine Bluff's affairs also speaks of the neighborhood's social connotations despite the adjacent railroad. Triplett was a well known banker and local politicial, Ferguson a successful wholesale grocer.

By the end of the 1880s the Little Rock, Mississippi River and Texas Railroads divided Fourth Avenue in two. Apparently the presence of the growing railroads become quite trying and Fourth Avenue lost its allure by the beginning of the 1890s. Soon, Fifth Avenue took its place as Pine Bluff's premier residential thoroughfare. Like Fourth Avenue before it, the character of Fifth Avenue was historically determined by a pleasant combination of mansions and cottages, but Fifth Avenue was to develop its own distinctive character as an almost bucolic, tree-lined streetscape.

Promotional literature of 1896 extols the virtues of Fifth Avenue as the finest new street in the city of Pine Bluff. It describes, "homes ... in the shade of beautiful trees ... from the simplest cottage to the home of wealth ... The vision rests upon a panorama garbed in the dress of rare and exquisite loveliness." The boulevard-like quality of Fifth Avenue with its wide tree-lined streets persists to this day. Indeed it is this characteristic, together with consistent historic land-use patterns and sensitive scale of infill construction during and since the prime historic era, that continues to give Fifth Avenue a very special aura and unites the district in a visual, yet historic, coherence.

As Fourth Avenue attracted the cream of Pine Bluff society a decade before, so too did Fifth Avenue become the home of the city's leading citizens. Prominent among those who built these houses on Fifth Avenue were members of a new but wealthy merchant class, including A.S. Honnett who settled at 817 West Fifth (14) in 1894; Fred Senyard who built 609 West Fifth (18) that same year; Adolph Bluthenthal who acquired the 1884 house at 713 West Fifth (16) in 1894; and Samuel Katzenstein who, somewhat later in 1913, settled at 902 West Fifth (22). Peter Paul Byrd, president of the Pine Bluff Compress and Wholesale Co. -- a cotton processing operation, built a residence at 617 Fifth (17) in 1899. His fine residence survives to underscore Pine Bluff's importance as a cotton center at the turn of the century.

The above-mentioned structures capture the transience of architectural tastes near the turn-of-the-century. Honnett's Queen Anne style house was altered to present an outstanding Georgian Revival esthetic in 1913, Senyard's home was transformed into an eminently modern building that reflects the influence of the developing Prairie style, and the silhouette of Bluthenthal's building underwent a stunning evolution with the addition of a second floor and the loss of much of its decorative woodwork. The survival of this varied historic fabric presents an enlightening chronicle of the architectural history of the late nineteenth and early twentieth century. Moreover, on Fourth and Fifth Avenue alike the scale, proportions and siting of structures and an impressive regard for the historic streetscape persists to retain the aura of a residential district as it existed during Pine Bluff's era of great property.

Since the Second World War, the Fifth Avenue Historic District has truly been a "neighborhood in change". No longer part of an exclusive residential area, houses in the district have been dissected to create multi-family dwellings and the economic base of the neighborhood has undergone significant change. Recent years have also seen part of the area zoned commercial. Some buildings have been lost and others have deteriorated, but the visual cohesion of the historic streetscape continues to dominate as and the 1970s have seen a new enthusiasm for perserving the area's resources.
