Section number 7

Pago Pillbox II (66-09-1216)

=====

The pillbox is situated along the southern shoreline of Pago Bay approximately 550.0m west of Pago point and 1.0m south of the high tide line. Built of steel-reinforced the structure is in good condition and it blends in with its surroundings.

The exterior dimensions of the structure measure 3.10m by 2.70m by 1.5m high. The entrance is located on the west side of the structure. One gun port is located in the north wall and one gun port is located in the northwest wall. The gun ports have views of Pago Bay. The wall with the gun ports are nearly 1.0m thick due to the additon of limestone boulders to the exterior sides of the walls. One section of the exterior face of the northwest wall has been broken away, exposing impressions of tree trunks in the concrete. The impressions suggest that logs were originally incorporated into the wall.

The structure had a flat roof with two vents. The vents are stepped. Larger on the surface of the roof where they measure .40 x .40m, they become narrower toward the ceiling of the interior where they measure .20 x .20m. The roof is .75m thick. The floor of the interior consists of coral and limestone rocks. Coral beach pebbles were mixed with the cement. Horizontal impressions of the boards used to build the form into which the concrete was poured are apparent on the interior walls. The interior height is 1.30m.
