NRIS Reference Number: 70000847

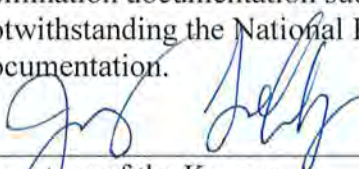

Date Listed: 7-1-1970

Property Name: St. Augustine Town Plan Historic District

County: St. Johns

State: FL

-----  
This property is listed in the National Register of Historic Places in accordance with the attached nomination documentation subject to the following exceptions, exclusions, or amendments, notwithstanding the National Park Service certification included in the nomination documentation.

  
\_\_\_\_\_  
Signature of the Keeper

11/24/2015  
\_\_\_\_\_  
Date of Action

-----  
Amended Items in Nomination:

Section 7: The property located at 66 Hypolita Street was improperly classified as noncontributing in the original nomination. Further investigation shows that the building was constructed between 1924 and 1930, within the districts POS, and that the building retains sufficient integrity from that period.

66 Hypolita Street is hereby classified as a contributing resource to the St. Augustine Town Plan Historic District.

\_\_\_\_\_  
The Florida State Historic Preservation Office was notified of this amendment.

**Describe the present and original (if known) physical appearance**

### SUMMARY OF PRESENT AND ORIGINAL PHYSICAL APPEARANCE

The revised St. Augustine Historic District, located in St. Augustine, Florida, is composed of buildings reflecting a variety of uses, styles, materials, and several distinct periods of development. The district consists primarily of attached and detached masonry and frame commercial and residential buildings generally rising one and two stories in height. Its settlement dates from c. 1566 when the Spanish adelantado Pedro Menendez de Aviles founded the town at its present location. Its physical development began c. 1603 when Governor Mendez Canco ordered the laying out of the town. Its oldest standing structure in the district is the Castillo de San Marcos begun in 1672 and completed during the 1690's. Contributing buildings in the district date from c. 1740, when the town was destroyed by invading Georgians, to approximately 1935 when Government House, one of the major buildings in the district, was completed. They generally are of a frame or masonry vernacular design, but also include examples of Spanish and British colonial styles, late nineteenth century styles such as the Queen Anne, Carpenter Gothic and Moorish Revival, and the Spanish Revival style dating from the Florida Boom of the 1920s. The district has lost some of its integrity due to poor maintenance, destruction and alteration, but overall it retains to a remarkable degree the physical characteristics which convey its historic periods of development.

TEXT SUPPORTING PRESENT AND ORIGINAL PHYSICAL APPEARANCE

St. Augustine is an incorporated city with a population of approximately 15,000, located in the northeast corner of the State of Florida, in St. Johns County, on the Atlantic Coast. Its economy is based on commercial fishing, tourism, industry, and commerce. St. Augustine serves as the governmental center for St. Johns County.

The St. Augustine Historic District extends over an area of approximately one hundred and thirteen acres. Its rough boundaries are Cordova Street and Maria Sanchez Creek on the west, Orange Street and the Castillo de San Marcos property on the north, Matanzas Bay on the east, and a line running parallel to and two hundred twenty five feet south of St. Francis Street. A number of natural and manmade features define the boundaries of the district. On the east is Matanzas Bay and on the west Maria Sanchez Creek. The boundaries generally follow the original town plan of St. Augustine as it appeared in 1764 at the end of the First Spanish period.

St. Augustine is an urban area with mixed land usage, including residential, commercial and heavy industrial areas, vacant lands, and transportation facilities. The district contains buildings devoted to mixed uses: commercial buildings, county and state office buildings, single-family residences, large residences that have been adapted for use as multi-family dwellings or commercial uses, churches and schools. The zoning in the district is variable. The central portion of the current district, located primarily along King and St. George Streets, is commercial.

The district generally follows the limits of the colonial city of St. Augustine. The colonial city is the section of St. Augustine that was enclosed by the early eighteenth century defense lines. As best seen on the 1764 Puente map, the colonial urban area is bounded by present-day Orange Street on the north, Cordova Street on the west, San Salvador Street on the south, and the bayfront on the east. As a whole, the Colonial City represents the most diverse and comprehensive concentration of historic properties within the City of St. Augustine. It contains properties dating from the sixteenth through the early twentieth centuries.

Present and Original Physical Appearance (continued)

There are all or part of forty-six blocks in the district. The blocks are organized around a grid layout with streets running north-south and east-west. Avenida Menendez follows an irregular course along the bayfront in a north-south direction. The streets paralleling Avenida Menendez are more rectilinear. They are Charlotte, St. George, Spanish and Cordova Streets to the north of the central plaza and Marine, Charlotte, Aviles, St. George, and Cordova Streets to the south of the Plaza. The Streets running perpendicular to Avenida Menendez and the Bayfront are Orange, Tolomato Lane, Cuna, Hypolita, Treasury, Cathedral Place, King, Artillery Lane, Cadiz, Bridge, and St. Francis. Blocks located within the district are generally rectangular in shape, but very irregular in dimension.

Buildings were classified as contributing to the district based on the following criteria. They added to the sense of time, place, and historic development of St. Augustine through their location, design, setting, materials, workmanship, feeling and association. They number 212 or 74 percent of the total number of buildings in the district. They are all at least fifty years old and reflect a period of development spanning the period from 1672 to 1935.

The remaining buildings within the district fall into one of two categories. They are either more than fifty years old and retain little if any of their original physical appearance or less than fifty years old without exceptional significance. They are, however, accounted for in the final inventory, and the reasons for their exclusion will be noted and explained below. They number 75 or 24 percent of the total. Based on documentary research and architectural field survey, the year 1935 was chosen as the terminal point of the period of significant historic development of the district. The historic development was largely complete following the end of the Florida Land Boom in the late 1920s. The Atlantic National Bank Building, completed in 1927, was one of the last major buildings constructed in the district during its period of significant development. One other noteworthy building located in the district is Government House. Constructed in 1935, it is considered a contributing building because of its association with Mellen C. Greely, an important Florida architect, and its design and materials, which were combined in an attempt to reconstruct the Spanish governor's house on its original foundations. It was one of the first

Present and Original Physical Appearance (continued)

attempts at reconstructing the Spanish architectural heritage of St. Augustine.

Collectively, the buildings within the St. Augustine Historic District are the oldest in St. Augustine. Whereas only approximately 26 percent of the pre-1926 buildings in the city date from before the twentieth century, almost 50 percent in the St. Augustine Historic District City were built during the seventeenth, eighteenth, and nineteenth centuries. The range of architectural styles is also wider in the district than in other areas of the city, particularly along the entire length of St. George Street. Only 45 percent of the buildings are listed as Frame Vernacular, compared to 75 percent for the entire city. Moreover, one-half of the Moorish Revival and Carpenter Gothic Revival buildings, one-third of the Queen Anne buildings and all of the Gothic Revival buildings fall within the district. Examples of Italianate, Second Empire, and Spanish Revival are also located there.

Despite this architectural diversity, the most prominent style next to the vernacular is related to the colonial or Spanish-influenced. Almost one of every three surveyed buildings are designed in an Hispanic style: 18 percent as Spanish Colonial, six percent as St. Augustine Colonial Revival, and seven percent as Spanish Revival. As will be discussed below, this Hispanic ambiance does not pervade the entire Colonial City, but is concentrated in several blocks or on a number of streets. The historic district has its share of Bungalows (about five percent), but curiously, only about one percent of all buildings are designed in the turn-of-the-century Colonial Revival style, a style more popular in the new subdivisions, such as Model Land Company, which began developing during the Flagler era.

Located in the downtown business district, the St. Augustine Historic District has, compared with the rest of St. Augustine, the lowest percentage of private residences and, conversely, the highest percentage of commercial buildings in the city. It also has the greatest concentration of buildings used for museum and military purposes. With the exception of the buildings on Anastasia Island, those within the district are the best maintained in the city, with only 22 percent being listed in fair condition, well below the city-wide average.

For purposes of detailed analysis, the district is divided into a series of subareas that share certain historical and

## Present and Original Physical Appearance (continued)

architectural features and other characteristics. The northernmost section of the district was bounded in the eighteenth and nineteenth century by the Cubo defense line and the City Gate on the north and in the eighteenth century by the Rosario Defense line, present-day Cordova Street, on the west. This area first developed in the late seventeenth century as the city expanded northward from its earlier settlement south of the plaza. All structures, except the impregnable Castillo de San Marcos, were destroyed in the 1702 siege of the city, those generally north of Cuna Street by the Spanish to establish a clear field of fire from the fort, and those south by the invading South Carolinians. By mid-century buildings had been reconstructed mainly along St. George and Spanish Streets. A number of them still stand on St. George, including the Avero, DeMesa, Arrivas, and Rodriguez-Sanchez Houses. During the British period, the Minorcans generally settled this section of town which remained the "Minorcan Quarter" well into the nineteenth century.

New construction continued in the Second Spanish Period (1784-1821), with four extant buildings and structures dating from this era: the Paredes-Dodge, Triay, and Genoply houses (the latter also called the Oldest Schoolhouse) and the City Gate (photo 17). By the mid-nineteenth century, development expanded westward along Hypolita and Cuna Streets. The post-Civil War years brought intense commercialization to part of Hypolita and all of St. George Street as the main thoroughfare became lined with shops, boarding houses, and large hotels. The areas off St. George Street remained essentially residential, and Spanish Street became by 1900 one of several predominantly black neighborhoods outside Lincolnville, having its own school and church in the southernmost block of the street. St. George Street underwent major changes in the late nineteenth and early twentieth centuries with the construction of the massive concrete city hall at the corner of Hypolita Street, the demolition of colonial structures, and the erection of brick commercial buildings. This section of the street gradually deteriorated into a depressed business district. Since 1959, the Historic St. Augustine Preservation Board, in conjunction with the St. Augustine Restoration Foundation and private citizens, has restored and reconstructed 25 five buildings along St. George and Cuna Streets as part of a movement to recognize the city's disappearing colonial past. Several of the Board's buildings are operated as part of a living-history museum, San Agustin Antiguo.

Page 5

Present and Original Physical Appearance (continued)

This section of the district, located immediately to the southwest of the Castillo de San Marcos, has been the major area of restoration efforts over the past two decades and is one of St. Augustine's leading tourist attractions (photo 12). The principal architectural ambiance of this section is Spanish or British Colonial in nature with almost 40 percent of the surveyed buildings designed in Colonial or St. Augustine Colonial Revival styles. Restorations and reconstructions line most of St. George Street. Elements contributing to its colonial ambiance include buildings constructed at street line, walls lining the street, overhanging balconies, and ornamental rejas or window bars. Streets outside the Restoration Area, particularly on Cuna, Spanish, and Charlotte Streets, have a large number of Frame Vernacular post-colonial buildings, generally built between 1865 and 1904, although the one at 46 Spanish Street dates from the early Territorial Period. Avenida Menendez (photo 4), formerly Bay Street, has become a modern commercial street dividing the Restoration Area and the Castillo. The area generally retains its colonial street patterns, though there have been major alterations around the City Gate and bayfront. This section is bounded on the east by the bayfront and seawall, long a famous scenic attraction.

A relatively balanced combination of residential and commercial uses are found in this area, and, because of the Preservation Board's museum, almost one-half of all the museum buildings in the Colonial City are located here. Despite the extensive restoration and reconstruction work that has taken place, the area suffers from the largest collection of buildings in the Colonial City listed in either fair or deteriorated conditions. The conditions result primarily from the numerous nineteenth century wood frame buildings on the fringes of the Restoration Area. Traffic is limited in the area and banned on St. George Street, but there are still serious traffic and parking problems in the heavily traveled area. Because of the commercial value of the land, there are continuing pressures for new development, which is not always in conformity with historical antecedents.

From Hypolita Street to Cathedral Place is another distinct area of the district. The area has been one of the main commercial and hotel districts in St. Augustine since the mid-nineteenth century. It was first developed in the late seventeenth century as the colonial community expanded northward towards the newly-completed Castillo de San Marcos. The entire

Page 6

## Present and Original Physical Appearance (continued)

city was destroyed in 1702 by the invading South Carolinians, but by mid-century, the Rosario defense line had been erected along present-day Cordova Street and numerous residences had been rebuilt on all streets, particularly between Charlotte Street and the bay. By the end of the colonial period (1821), this area was one of the most densely populated in the city, and a number of buildings from the Spanish era have survived: the Fornells, Sanchez, Burt, Joaneda, and Espinosa-Sanchez houses. In the Territorial Period, the huge Florida House was constructed along Treasury Street between Charlotte and St. George Streets, and the Methodist Church located immediately north of it on Charlotte Street. The post-Civil War years brought intense commercialization to St. George, Charlotte, and part of Hypolita streets. The Magnolia Hotel on St. George Street and the County Courthouse on Charlotte Street were also constructed in the late nineteenth century. By that time Spanish Street had become one of several exclusive black residential neighborhoods outside Lincolnville, with its school on the Dragoon Barracks lot and its own church south of the Magnolia Hotel. The bayfront was a residential area with several boarding houses. A bathhouse and yacht club projected into the bay from the seawall. This section of the colonial city, particularly the blocks between the bay and St. George Street, was ravaged by major fires in 1887 and 1914, and consequently it has one of the lowest percentages of nineteenth century buildings within the city. The older buildings are located along Spanish Street and the west side of St. George Street south of Treasury Street, two areas untouched by devastating fires.

Buildings in the area date from colonial period to the present, although most (61 percent) were constructed in the twentieth century. The area, moreover, has the fewest colonial buildings within the district. No one style has a visual dominance, but a combination of Spanish Colonial, St. Augustine Colonial Revival, and Spanish Revival, accounting for 44 percent of the buildings, contribute to an Hispanic theme, different though from the Spanish Colonial theme dominant in the Restoration Area to the north. An interesting Moorish Revival facade on St. George Street further adds to this southern European ambiance. Charlotte and Spanish Streets, however, have retained a late nineteenth-early twentieth century look due to the cluster of Frame Vernacular buildings there. Because of the commercial nature of this section, there are relatively few Frame but many Masonry Vernacular buildings. With the exception of Avenida Menendez, the late seventeenth century street pattern

Present and Original Physical Appearance (continued)

generally has remained intact, and the area boasts the narrowest street in the city: Treasury Street east of Charlotte Street. The section is also bounded on the east by the scenic bayfront and seawall area.

St. George Street north of the central plaza is still St. Augustine's leading commercial center as testified by the fact that almost one-half of the buildings are used for commercial purposes and that businesses outnumber the combined total number of private residences and apartments. As a business district, it is faced with traffic and parking problems, the result being that large areas have been leveled and blacktopped for parking lots. The streetscape has been damaged by the destruction of landscaping and the conversion of some building facades to reorient them. A once-famous colonial stretch on the east side of Charlotte Street, for instance, is now mainly taken up with the backs of motels and other commercial establishments. Because of more recent construction, about 70 percent of the buildings are listed in good or excellent condition, and none are listed as deteriorated. Buildings in fair condition are found among the clusters of late nineteenth century Frame Vernacular buildings along Charlotte and Spanish streets.

The plaza area is still another distinctive area of the district. The concept of plaza or public square has been central to Spanish urban planning in the New World since the late sixteenth century. According to 1563 and 1573 royal ordinances, the plaza was to function as the principal recreational and meeting area in the community and was to be surrounded by the most important governmental and ecclesiastical buildings. The St. Augustine plaza dates from this period, although only one of the stipulated buildings, the Governor's House, actually fronted the plaza before the early eighteenth century. In the eighteenth and early nineteenth centuries, the plaza became surrounded by a cluster of newer civic and religious structures, including the Bishop's House (later the British Statehouse and Spanish provisional church) at the corner of St. George and King, the Accountancy and Treasury building at the corner of Cathedral and Charlotte, the public school at the corner of St. George and Cathedral, and the parish church (now the Basilica-Cathedral). The plaza itself contained several colonial structures, most notably the non-extant stone guardhouse at the eastern section and still standing Constitution Monument (photo 22) in the center of the square. Construction of Trinity Episcopal Church and the Public and Fish markets were major changes introduced in the

Page 8

## Present and Original Physical Appearance (continued)

1820s and 1830s, although the "Public Square" went only as far as Aviles (Hospital) Street just west of the above markets. In the 1870s trees, plants, and fountains were added to beautify the "Plaza de la Constitucion," a Confederate monument was erected, and the plaza was extended east to Charlotte Street. By the late 1880s, the plaza was ringed by large buildings, notably the St. Augustine Hotel. Smaller commercial buildings replaced the hotel after the devastating fire destroyed the hostelry and severely damaged the Public Market and Cathedral in 1887. In 1893, Cathedral Place was extended from St. George Street to Cordova Street, thus forming a smaller plaza to the west of Government House.

Although the massive eighteenth century coquina Rosario redoubt had been earlier demolished to widen Cordova Street, the west plaza area was still engulfed by the monumental Flager hotels on the south and west and by a cigar factory on the north. Dramatic alterations were seen in the plaza area in the 1920s. A bandstand was built in the center of the plaza, the Ponce de Leon statue unveiled to the east, the tall First National Bank building (photo 28) constructed, and the Bridge of Lions opened at the east end, formerly the plaza basin. In the last two decades, demolition of the Bishop's House and Bishop Block have altered the view in the northwest corner of the plaza.

The plaza is bordered by religious, commercial, and governmental buildings representing a range of construction of almost two centuries, from the Basilica-Cathedral (1797 but rebuilt in the 1880s) (photo 21), the Public Market Place (1824), and Trinity Episcopal Church (1825) to stores built in the 1950s. The architectural ambiance of the plaza area is noticeably Hispanic with Spanish Colonial and Mediterranean Revival buildings constituting the majority of the edifices. The Gothic Revival Trinity Episcopal Church and the vernacular Public Market add visual diversity to the area. Masonry is the dominant building material. The tallest building in the city, the Atlantic Bank, fronts the plaza, and the other buildings are generally multi-storied. The plaza and adjacent area have been the favorite place for the town's monuments from colonial through modern times, most notably the Constitution Obelisk (1814), the Confederate War Memorial (1872), the Pell Horse Fountain (1887), the Post Office Park Fountain (1899), the Loring Memorial (1920), the World War I Memorial (1921), the Anderson Fountain (1921), the Ponce de Leon Statue (1923), the World War II Memorial (1946), the Father Camps Statue (1975). The plaza is bounded on

the west by Flager College, formerly the Hotel Ponce de Leon.

The plaza area has been and still is a leading commercial, governmental, and ecclesiastical center in St. Augustine. As a result, the buildings generally are well maintained. Government House has served a number of governmental functions over the years and now serves as the offices of the Historic St. Augustine Preservation Board. Because of the plaza's central location in downtown St. Augustine, traffic and parking problems plague the area, and many significant buildings in adjacent areas have been demolished for parking lots. Increased traffic brought into the plaza area by a proposed enlarged bridge would seriously impair traffic flow in the downtown area, threatening the integrity of the historic colonial town plan.

From King Street to Bridge Street is another distinctive area of the district. The area has been continuously occupied since the sixteenth century and represents the location of the 1565 settlement of St. Augustine. All buildings were destroyed during the 1702 attack by the South Carolinians, but by mid-century, the Rosario defense line had been erected along the present-day location of Cordova Street, and numerous buildings rebuilt throughout the area, although density was greater towards the bayfront. In the eighteenth and early nineteenth centuries, the area contained a number of governmental and ecclesiastical buildings, including La Soledad parish church and school on St. George Street and the hospital and jail on Aviles (Hospital) Street. The southern border of this area, Bridge Street, led to one of three late colonial San Sebastian River ferry crossings. Certain patterns of earlier development persisted into the American Period in the area. Aviles Street had a disproportionately large number of public and educational facilities such as the Territorial City Council Meeting House, and in the late nineteenth century, the Peabody School, city jail, library, and police and fire departments. St. Joseph's Academy opened in the 1870s on St. George Street. Several prominent hotels were also located in this section, including the Ocean View on the bayfront and the St. George adjacent to Trinity Episcopal Church. Since the Civil War, St. George Street has remained a residential neighborhood of stately homes.

Present and Original Physical Appearance (continued)

This section has been heavily influenced by colonial developmental patterns. The small blocks and narrow streets of the sixteenth century settlement are still evident, and one of the largest concentrations of extant colonial buildings is found here: the Horrutiner-Lindsley, Paredes-Segui-Macmillan, and Canova-Murat houses on St. George Street; Segui, O'Reilly, Papy, and Ximenez-Fatio houses on Aviles Street; Solana House (photo 18) on Charlotte Street; and Jacinto House on Marine Street. This section, moreover, has an interesting cluster of Territorial Period buildings on Bridge Street between St. George and Cordova Streets. Many fine Victorian buildings from the Flager era, like those on Palm Row (photo 26), are evident, as well as the best example of Carpenter Gothic in the city. The massive Gothic Revival St. Joseph's Academy building lends greater architectural diversity to the area. Some remodeling and construction have taken place in the St. Augustine Colonial Revival Style as well. Aviles Street retains some colonial ambiance, with many buildings constructed on the street line, overhanging balconies, and coquina property walls (photo 7). The visual effect of other streets tends to be mixed Spanish Colonial and Victorian, except along the bayfront, which is dominated by modern motels. The last surviving buildings projecting over the water are found along this stretch of the bayfront.

With the exception of St. George and Bridge streets, the area has a high percentage of buildings used for commercial and transportation purposes. St. Joseph's Academy sits between a residential and commercial-museum area. Primarily because of the Territorial and post-Civil War wood frame buildings, this section has the highest percentage of buildings in the Colonial City listed in fair or deteriorated condition. The mixed usages in the area as well as its proximity to the prime business and government district have led to severe traffic and parking problems. The traffic load is especially damaging since some streets, notably St. George, Aviles and Charlotte, are still surfaced in turn-of-the-century brick. Because of parking, many significant buildings, particularly Flager era hotels and mansions, have been demolished over the years for parking lots and other facilities.

Between Bridge and St. Francis streets is another distinct area within the district, one that was initially occupied in the first half of the seventeenth century as the early settlement expanded south towards the St. Francis convent. All structures were destroyed in 1702 by invading South

Present and Original Physical Appearance (continued)

Carolínians, but by mid-century houses had been rebuilt on all streets except present-day Cordova Street, then the course of the early eighteenth century Rosario defense line. The northern boundary of the area, Bridge Street, led to one of three late colonial San Sebastian River ferry crossings. The British demolished numerous buildings here, but were the first to build along the bayfront on the east side of Marine Street. The Spanish filled this low-lying land in the 1790s, and substantial residences were thereafter erected on the reclaimed land. The Spanish crown owned considerable property in this section of the Colonial city, such as a school building near the southeast corner of Bridge and St. George streets and the vacant land west of St. George Street where crops were raised by the garrison. The area remained essentially residential throughout the American period, although several religious structures were built along St. George Street (the non-extant nineteenth-century Presbyterian Church and the 20th-century Cathedral Parish School complex) and along Cordova Street (the 20th-century synagogue). Several boarding houses were scattered throughout the area, most notably the St. Francis Inn and the Valencia Hotel.

This section is the oldest neighborhood within the Colonial City, with 57 percent of the surveyed buildings dating from the eighteenth and nineteenth centuries. The four Territorial and Early Statehood buildings found here represent the largest concentration of such buildings in the entire city, and nine colonial buildings, one of the greatest concentrations in the Colonial City area, have survived in this section, particularly in clusters along Marine and St. Francis Streets: the Sanchez, Marin, Puello, Gonzalez-Jones, Rovira-Dewhurst, and Rovira-Hernandez houses on Marine Street; the Tovar and Alvarez (Oldest House) houses on St. Francis Streets; and the Garcia-Dummett House on the corner of St. Francis and St. George Streets. The Llambias House and the St. Francis Barracks (photo 20) lie on the south side of St. Francis Street.

Since one-third of the colonial buildings have been altered to non-Spanish Colonial styles, however, the colonial motif does not dominate the area, with the exception of the Historical Society complex along St. Francis Street and partially down Charlotte and Marine streets. This section is the stylistically most diverse within the Colonial City. Sixty percent of the Queen Anne, two-thirds of the Colonial Revival, and one-third of all the Bungalow buildings in the old city area are located here, as are examples of Mediterranean Revival, Second Empire, Italianate,

Present and Original Physical Appearance (continued)

and Mediterranean Baroque. The bayfront and St. George Street are two of the outstanding Victorian period neighborhoods in St. Augustine, with many elegant and more elaborate winter residences from the Flagler era. The early seventeenth-century street plan is still intact, except along Avenida Menendez, although the street widths and block sizes are larger than in the sixteenth century section located immediately to the north.

This section has the highest percentage (87 percent) of the surveyed buildings within the Colonial City. A few commercial buildings dot the area as do nine religious and three educational buildings. The museums operated by the St. Augustine Historical Society are situated at the southern end of the section. Despite their age, the buildings are in relatively good condition, with a pocket of frame buildings in fair condition along Charlotte Street. The streets, some still brick, are exposed to a high amount of tourist, school, National Guard, and Flagler Hospital traffic that passes through the area.

The area along and to the south of St. Francis Street forms the last distinctive area of the district. The presence of the church and the military dominates the historical development of the walled city there. This southern section has been occupied since the Spanish constructed the church and convent of St. Francis in the late sixteenth century. The religious structures were destroyed by South Carolinians in the 1702 attack on the city, but they were rebuilt out of coquina by mid-century. A number of private residences were erected along St. Francis and Charlotte Streets, but this area was one of the poorer neighborhoods in the colonial community. The Rosario defense line, built in the early eighteenth century, enclosed this tract on the west and south and terminated at its easternmost stone bastion, Fort St. Francis. The British significantly altered this section by converting the convent into military barracks, erecting a new frame barracks to the south, and demolishing most of the modern Spanish residences. With the exception of the extant colonial buildings along both sides of St. Francis Street (including the Llambias House) and the colonial barracks complex that became a permanent U. S. military reservation in 1832, this section remained underdeveloped until the late nineteenth century and early twentieth centuries. The British and Spanish used the vacant land west of Charlotte Street as a military cemetery and in the Territorial Period the victims of the Dade Massacre were interred there. This burial ground became a National Cemetery in

Page 13

Present and Original Physical Appearance (continued)

the 1880s. After the Civil War, houses were built on Federal property for military personnel, and a black residential neighborhood, one of several outside Lincolnville, developed along Charlotte Street. Several large private residences were constructed on St. Francis Street, notably the Stickney House at 282 St. George Street, which for a brief time around World War I served as Flagler Hospital. St. George Street south of St. Francis Street was not cut through until the early 1890s and the neighborhood did not fully develop until the first three decades of the twentieth century. A few private residences were also built on Marine Street early in the century. Since 1907, the State of Florida has operated the St. Francis Barracks complex as the State's military headquarters.

Although a cluster of two colonial buildings is situated along St. Francis Street, this section is the youngest within the Colonial City, two-thirds of the buildings dating from the twentieth century. The late nineteenth century homes are located along the bayfront on Marine Street while the newer buildings are situated on St. George Street. This area has a high concentration of bungalows with over one-half within the Colonial City locate there. Of particular interest is a series of shingled bungalows with palmetto porch posts along St. George Street. Also noteworthy is the fact that buildings on this street generally back up to Maria Sanchez Lake rather than face it, as do the house on the west side of the lake. The same pattern is true along the Matanzas River, so maximum advantage is not taken of the waterfront property in this area. This area is residential in nature, especially in the eastern and western sections. Because of their age and the stability of the neighborhood over time, the buildings are in the best condition of any within the St. Augustine Historic District. The area does suffer from excessive traffic heading towards the National Guard offices and Flagler Hospital, although most is channeled down the major thoroughfare, Marine Street.

The St. Augustine Historic District is a mosaic of architectural styles and periods of development. The colonial period in St. Augustine lasted from 1565 until 1821. The city was under Spanish rule until 1763. The british controlled St. Augustine from then until 1784, when the Spanish returned for their final period of rule. A distinctive architecture developed during this time, growing more substantial from the early rude

shelters of wood, thatch, and wattle-and-daub to the masonry age that followed the siege and burning of the city in 1702. The oldest, and most outstanding, surviving building is the Castillo de San Marcos, which was constructed between 1672 and 1695 (photo 16). It was the first large scale building using locally available coquina rock. It is the oldest masonry fort in the United States and is recognized today as a national landmark and maintained by the National Park Service.

The thirteen extant residences that date from the First Spanish Period have been extensively enlarged and altered over the years. Distinctive architectural features of this period include projecting rejas and other wooden grillwork, interior shutters, arcaded loggias, and projecting rainspouts, known as canales, on flat-roofed buildings. The British, during their two decades in St. Augustine, often added extra rooms or upper stories to enlarge existing buildings. The combination of rejas and interior shutters was replaced by single or double hung sash with exterior shutters. Colonial buildings were generally constructed at the street line with walled courtyards and doors on the south side entering off the courtyard or loggia. The British often altered these by placing doors directly on the street. Window glass and chimneys also became common during the British period. Balconies projecting over the street were another distinctive colonial feature. They sometimes have corbeled supports as a functional and decorative element.

Residential construction was functional rather than ornate, but some of the public buildings were constructed on a grander scale. The facade for the Spanish Treasury, on the northeast corner of St. George and Treasury streets, reputedly had the most ornate coquina work in the city. The extant cathedral, originally constructed in the 1790s, also went beyond the merely functional. Its facade was inspired by Neo-Classical style popular in Latin America in the late eighteenth and early nineteenth centuries.

Of the 300 buildings remaining in the town at the end of the colonial period, about 90 percent have been destroyed. To serve the needs of later occupants, the survivors have been remodeled over the years, sometimes effectively concealing their colonial heritage behind facades and additions that range from early American to modern. In recent decades several colonial buildings have been restored, through public and private efforts, to their appearance at an earlier time. Buildings from all three periods

of the colonial era have been reconstructed, sometimes on the original foundations, in an attempt to return a colonial ambiance to some parts of the old city, particularly along north St. George Street and around the Oldest House complex, on St. Francis, Marine, and Charlotte streets.

The early American Period in St. Augustine, from 1821 until the Civil War, saw continuity and change in architecture. Vernacular buildings, particularly in the early years, are similar to late colonial buildings in materials, size, lot placement, and construction techniques. Examples include the continued use of coquina in construction. Even after it ceased being used as the main material for house walls, coquina was still widely employed for foundation piers and chimneys. Balconies remained a prominent feature on some of these buildings. On roof dormers, the colonial practice of placing the siding parallel with the pitch of the roof was still followed in many cases. Post-1821 vernacular construction continued to reflect functional simplicity in a town that was, and remained for many years, basically poor. As the years passed and more people from other parts of the United States settled in St. Augustine different ideas about architecture and construction were introduced. Nationally these were years when the Greek Revival style became popular before giving way to the Gothic Revival. Building techniques were experiencing revolutionary change with the development of balloon frame construction in Chicago in the 1830s. A gradual shift in lot placement occurred in St. Augustine as buildings were moved back from the streetlines. Front yards, fenced-in but visible from the street, replaced the walled colonial courtyards.

More elaborate and substantial buildings showed the influence of the Greek and Gothic Revival styles. But the examples found in this distant outpost contained only a hint of the development of styles that reached fullness elsewhere. Trinity Episcopal Church, begun in 1825, combined the contemporary Gothic style with an older building material, coquina. The mansion of Gen. Peter Sken Smith, built next to Trinity Church in the 1830s, and the original Magnolia Hotel on St. George Street, built in the 1840s, showed Greek Revival influence. But in place of the fluted columns often associated with the style, the buildings displayed simple square or round wood columns with unadorned capitals. A common distinctive feature on both vernacular and more stylized buildings of the early American Period is the use of an x-pattern balustrade on

Present and Original Physical Appearance (continued)

porches and balconies. Chamfered porch posts were widely used, and blinds with fixed louvers replaced the solid wood shutters of the colonial era. This was a period of great popularity for ashlar-scored stucco on coquina buildings. More refinement in details like moulding and window and door trim is found in the Early American than in the Colonial Period Buildings.

Carpenter Gothic, a peculiarly American version of the Gothic Revival, is the first of the distinctively nineteenth century styles to have survived in St. Augustine. It was popularized nationally in the writings and plan-books of Andrew Jackson Downing, Alexander Jackson Davis, and Richard Upjohn, published in the 1830s, 1840s and 1850s. The hallmark of the style is an extensive use of sawn wood ornamentation of the bargeboards and eaves of the roof. This was made possible by the nineteenth century development of the jigsaw. According to architectural historian William Pierson, "the complex lace of the Gothic cottage represents the first instance in this country in which technology, in the form of a power driven tool, had a major effect on the visual character of the American house." Steeply pitched gables lent a pronounced vertical emphasis to these buildings.

Carpenter Gothic buildings became popular in St. Augustine in the decade before the Civil War. The Trinity Church Parish House (long since demolished and replaced by a newer building) dates from this period. The Stanbury Cottage at 232 St. George Street was probably built a few years later and represents the highest development of the style in St. Augustine (photo 24). This house is literally dripping with gingerbread and could well serve as a textbook example of Carpenter Gothic architecture. It features not only jigsaw ornamentation on the eaves and gables, but also a distinctly Gothic balustrade on the projecting balcony and diamond-shape multipane windows. Nationally, both stucco and board-and-batten siding were popular exterior finishes for this style. However, the Stanbury Cottage has weatherboard siding. Old photographs reveal that there were other examples of Carpenter Gothic in the district. But, given the incompleteness of the evidence, it is difficult to say how many. New construction was largely suspended during the Civil War, and when it began again in the late 1860s and early 1870s, the style's popularity had passed. In the 1880s and 1890s, another period of building boom in St. Augustine, there was a revival of some of the elements (particularly jigsawed bargeboards), but these not as bold as their predecessors.

Present and Original Physical Appearance (continued)

The Second Empire style was French in origin, taking its name from the era of Louis Napoleon, and popularized with the construction of the New Louvre in Paris in the 1850s. The hallmark of the style is the mansard roof, which is doubled-pitched and four-sided, with dormers projecting from the lower, steeply-pitched section. In the United States there are early examples of the style that date from just before the Civil War. But it was most widely used during the building boom that followed the conclusion of hostilities. For that reason, Second Empire is often called the "General Grant Style," referring to the presidential era that lasted from from 1869-1877.

In the late 1860s and early 1870s tourists began to come back to St. Augustine, and several wealthy Northerners had villas in the Second Empire style constructed as winter residences. The 1885 Bird's-Eye View of the city shows quite a number of these in areas that were being developed or redeveloped at that time. The outstanding builder connected with this style here was Capt. Thomas F. House, a Union veteran and native of Vermont. He came to St. Augustine in 1868 and served as alderman, mayor, and collector of customs. In addition to his own Sunnyside Hotel (which had a Mansard tower) on the Hotel Ponce de Leon site, he constructed the Buckingham Smith Nursing Home (later the Buckingham Hotel) and a number of winter residences in the Second Empire style. The style died out here in the late 1880s, the early years of the Flagler era. Once seen as the height of style, these buildings came to be judged ugly and outmoded, and most of them have been demolished. The only remaining mansard roof in St. Augustine is found on the colonial St. Francis Inn at 279 St. George Street, added to that building between 1888 and 1890. The Stickney House at 282 St. George Street, built in the 1870s, and the Abbott Mansion at 14 Joyner Street, which dates from the 1880s, were originally designed in the Second Empire Style, but were drastically remodeled in the 1920s, their exteriors stuccoed and their mansards replaced by hip roofs. The Moorish Revival Style Lyon Building, built in 1886 at the corner of King and St. George streets, originally had a mansard roof, making it a curious amalgamation of styles. But the top story was enlarged in the 1890s and the roofline altered to a more conventional hip. In recent years, architects have remodeled several commercial buildings with "mansards" that are in reality modern false fronts bearing no relation to the classical style.

The Moorish Revival style was introduced in St. Augustine

Present and Original Physical Appearance (continued)

by Franklin W. Smith with the construction of his Villa Zorayda in 1883. Smith was a Boston merchant and amateur architect whose hobby was reproducing (as both models and functional buildings) famous architectural examples from other cultures around the world. His work in the Moorish theme was inspired by the Alhambra in Spain, some of whose traceries are repeated on the interior walls of Villa Zorayda. The Moorish Revival buildings constructed in St. Augustine in the 1880s and 1890s form one of the distinctive architectural treasures of the city. They are also the pioneers of poured concrete block construction. Drawing, as they do, from variants of Moorish or Islamic architecture found in Spain, they differ significantly from other Moorish buildings like P. T. Barnum's mansion "Iranistan" in Bridgeport, Connecticut, and Henry Plant's Tampa Bay Hotel, which sprouted minarets and onion domes, features that drew from a different area and a later time in the Islamic world. The hallmark of the style in St. Augustine includes a flat roof with the parapet heavily decorated with cast concrete ornamentation. Sometimes there is a pavilion tower. Exterior walls are not highly ornamented, depending for their effect either on the distinctive pour marks of the concrete or the rustications of the concrete block veneer for those buildings that are of wood frame construction. Door and window lines have a variety of interesting treatments, and the horseshoe arch motif is widely used. Buildings use both wooden and metal balconies, and some feature ornamental tilework as well.

The Cordova Hotel (now the county courthouse) was the largest Moorish Revival structure in St. Augustine (photo 7), with the adjacent Lyon Building designed to conform to it. There was even some spillover of Moorish design into wood construction, with a horseshoe arch pattern found in some of the gingerbread around town. Some of these buildings have fallen prey to fire, demolition, and remodeling over the years, but the surviving examples serve as a vivid reminder of the importance of this exotic style in the development of St. Augustine's architectural heritage.

Queen Anne is the ultimate late nineteenth century style, originating in the late 1860s with the work of British architect Richard Norman Shaw. It was given impetus in the United States with buildings erected by the British government at the Philadelphia Centennial Exposition of 1876 that attracted widespread favorable comment. The style remained popular until the turn of the century. Hallmarks of the Queen Anne style

Present and Original Physical Appearance (continued)

include a combination of siding materials (often making use of patterned novelty shingles), irregular plan and massing, ornamental brickwork on chimneys, and, most noticeably, the use of towers and turrets. Porches and bay windows add to the effect. St. Augustine builders in the late 1882 city directory, advertised their skill at building "Queen Anne Cottages." The Magnolia Hotel on St. George street, rebuilt in the 1880s by the contractors Cole and Mance, was probably the largest building of this style found in St. Augustine. It was destroyed by fire in the 1920s. The Upham Cottage at 268 St. George Street, which lacks a tower but has the other elements in great profusion, including outstanding ornate interior woodwork, is probably the finest surviving residential example of this style. As with other buildings that have gone out of style, many "Queen Annes" were destroyed over the years, leaving only about a dozen extant. Others have been stripped of some distinctive elements. Several houses have had their towers removed, thus diminishing the St. Augustine skyline.

The Colonial Revival style harkens back to early American buildings that drew inspiration from English Georgian architecture of the time. The style was popularized by buildings designed for the 1892-1893 Columbian Exposition in Chicago. It involved both a rejection of exuberant Victorian architecture and an affirmation of patriotic feeling which asserted that America's coming of age required delving into national roots for architectural inspiration. This style was popular throughout the first three decades of the twentieth century. Hallmarks of the Colonial Revival style found in St. Augustine include porticoes with round wood columns, dentil mouldings, fanlight windows, and sidelights at the main entry. Both weatherboard and wood shingle exteriors are found. The Colonial Revival building is typically painted white with white trim, in contrast both to the original colonial buildings and to the Victorian styles that immediately preceded the Colonial Revival. It is one of three dominant styles found in early twentieth century tract developments in the city, quite often in a diminutive or subdued version.

The Bungalow is the first distinctive twentieth century style found in the St. Augustine Historic District. Its inspiration was international. The name came from India, and some of its more distinctive features were borrowed from Swiss and Japanese architecture. It represented a clear break from the preceding nineteenth century styles in terms of size, massing, and many interior features. Overall, vertical lines in the

Page 20

## Present and Original Physical Appearance (continued)

earlier styles were replaced by a horizontal emphasis. Visible structural members of the buildings were highlighted. The typical bungalow is one or one and one-half stories, with a low pitched gable roof and porches. Jigsaw ornamentation was replaced with unadorned triangular bungalow brackets under wide eaves. Turned or chamfered porch posts were replaced with shingled or battered wood ones. The use of native construction elements was a feature of bungalows around the country. In St. Augustine native elements included palmetto tree posts on porches, coquina fireplaces, and chimneys on more elaborate examples. Frequently, combination double hung windows are found, with a single large pane in the bottom sash, and three, four, five, or six panes on top, separated by vertical muntins. Weatherboard, novelty siding, and wood shingle exteriors were popular. There are a few examples of stucco and composition shingle finishes as well. Several areas in the southern portion of the district developed around World War I and shortly afterwards have large concentrations of bungalows. They were a popular design for the tract housing of the times. The outstanding architect associated with this style in St. Augustine was Fred A. Henderich, who designed many bungalows on south St. George Street near Maria Sanchez Lake.

The Spanish Revival Style was closely associated with the Florida Boom of the 1920s. It drew from architectural features found in the Mediterranean basin, particularly Spain, Italy, and North Africa. In some ways the style was a logical successor to Spanish Colonial architecture in St. Augustine. Many of its distinctive elements were pioneered in the Spanish Renaissance buildings of the Flagler era and the contemporary Mission Revival buildings in California. The style was popularized at the Panama-California International Exposition at San Diego in 1915, and by the 1920s had swept California, Florida and other sunbelt states. The archetypal Florida building in the Spanish Revival style was the extremely ornate Villa Vizcaya, built in Miami from 1914-1916 for Chicago industrialist James Deering, whose family had formerly wintered in St. Augustine. The best-known architect in this style was the flamboyant Addison Mizner, who designed a number of outstanding Spanish Revival buildings in Palm Beach, Boca Raton, and elsewhere. Hallmarks of the Mediterranean Revival style in St. Augustine include clay tile roofs or cornices, stucco finish (smooth, textured, or shell dash), and the use of an arch motif on windows, doors, and porches. Casement and fanlight windows are found, along with double hung sash. There is some use of ornamental ironwork for windows grilles and

## Present and Original Physical Appearance (continued)

balconets. Popular exterior colors were white, yellow-brown, and rose.

The St. Augustine Colonial Revival style draws from the Spanish heritage of the area and involves both new construction and the remodeling of older buildings. It includes both reproductions of earlier styles and the drawing of elements from them. Probably the earliest example was the Drysdale building at Avenida Menendez, which was reconstructed along the lines of a colonial building on a site that was destroyed in an 1887 fire. While the style and size were similar, the building material used was poured concrete, rather than the earlier coquina. In the 1930s several buildings were remodeled by Walter Fraser, owner of several local tourist attractions, to make them appear older than they actually were. And when Government House was rebuilt as a depression-era project, it was designed in a manner similar to an earlier building that had once occupied the site. The major use of the style came after 1959, when extensive restoration and reconstruction activities were launched in the city. An early promoter was Earle Newton, the first director of the St. Augustine Restoration and Preservation Commission. The outstanding builder-practitioner was local contractor William Forrester. An attempt to bring a certain amount of visual harmony to the city, use of the style involved both real and imagined elements of colonial architecture. Such features as clay tile roofs, brick, and ornamental ironwork were a reflection of what had been done to colonial buildings over the years, rather than how they originally appeared.

Most of the buildings constructed in the St. Augustine Historic District before 1930 do not fall into any specific architectural style but are listed simply as frame vernacular, with a smaller number described as masonry vernacular. Those terms refer to the common construction style of any particular period, using either wood or masonry as construction materials. The buildings cannot be classified in a particular style, like Carpenter Gothic, or Queen Anne, or Colonial Revival. Most of them were probably designed by a builder rather than an architect, and some of them are tract homes dating from different periods. This is not to say they are without architectural merit. Indeed, some of the most distinctive buildings in the city, like those on Palm Row, are so classified. Vernacular buildings reflect the styles popular at their time of construction. There is some similarity within time periods, but not across time. The vernacular buildings of the 1850s differ greatly from those of

Page 22

Present and Original Physical Appearance (continued)

the 1890s or the 1920s. These buildings are important for a study of the representative architecture, construction techniques, and building materials of their times and reveal much about the social history of the community. Vernacular architecture gives an area its particular character.

Many Victorian vernacular buildings include porches decorated with gingerbread and may have patterned novelty shingles, jigsaw bargeboards, and rafters. Some of the smaller examples are based on a "shotgun" plan, with three rooms laid out in a direct line with no connecting hall. After the turn of the century, a boxy hip-roofed house was popular. Vernacular buildings from the first three decades of the twentieth century frequently show elements of the Colonial Revival and Bungalow styles of the time.

Archaeological sites are another important physical feature of the district. The largest and most significant site is the town plan itself which dates to c. 1600. Within the plan is a highly patterned spatial distribution of sites within house lots. Typical sites include the foundations of primary buildings, such as houses, outbuildings, particularly kitchens and privies, and wells, either barrel wells or square wells with walls generally constructed of coquina. Limited survey and excavation of archaeological sites have occurred in St. Augustine since the 1930's, although at present no detailed, comprehensive map of site distribution within the district exists.

The St. Augustine Historic district is a mosaic of architectural styles and periods of development. Only in that part of the district set aside as the official state-operated restoration area and living-history museum is the colonial Hispanic flavor of St. Augustine carefully and consciously preserved. Although the rest of the district contains buildings and other features of the Spanish occupation, the area outside of the restoration district has a charming and eclectic mixture of colonial, antebellum, late nineteenth and early twentieth century architecture. This fascinating blend of eras represented in the physical components of the community also reflects the cultural and stylistic heterogeneity of St. Augustine from its colonial period to the present.

**Statement of Significance (in one paragraph)**

The St. Augustine Historic District fulfills criteria A, B, C and D for listing in the National Register of Historic Places. It has significance in the areas of archaeology-historic, architecture, politics/government. It has significance at the local, state, and, in some instances, the national level. Its extant historic buildings date from c. 1682 until 1935. Many of them embody the colonial period of Florida's history when St. Augustine was the seat of government for the Spanish and British colonial governments. They are associated with events and individuals important to the historical development of the community, and individually and collectively represent several important periods of architecture. The district also has a number of historic sites dating from the late sixteenth century of proven and potential archaeological significance. While the expanded district has lost some integrity, it retains many of the features that embody various periods of historic development.

Statement of Significance (continued)

Based on the rules of the National Register of Historic Places (Title 36, Chapter I, Part 60, Section 60.16), the revised St. Augustine Historic District is justified to correct professional error in the original nomination, which did not clearly delineate the district's boundaries, failed to describe its period of significant development, and omitted an inventory of buildings and other properties that contributed to it.

The most obvious area of significance associated with the St. Augustine Historic District is exploration/settlement. Founded in 1565, St. Augustine is the site of the oldest continuously occupied settlement in the United States. Archaeological excavation has uncovered sites dating to the sixteenth century within the limits of the district. The oldest above surface remnant of the Spanish presence in St. Augustine is the town plan, dating from c. 1600.<sup>1</sup>

The town plan of St. Augustine is itself significant. Beyond its association with important historical events, it is significant in the area of town planning. Spanish towns in the New World have long been recognized as significant to urban history. To a far greater degree than any other colonial power in the New World, the Spanish followed a system of land settlement and town planning formalized in written rules and regulations. In contrast to the more organic English system, their towns were uniform and centrally planned. From Florida to northern California there extends an area once subject to Spanish rule, within which are vestiges of Spanish town plans, including the one at St. Augustine.<sup>2</sup>

As Spain extended its rule into increasingly larger areas, individual orders and instructions for the settlement and administration of new towns became redundant. In 1573 the Laws of the Indies established uniform standards for colonial administration, including procedures for planning new towns. They represented a codification of principles of town planning which had become fairly standardized some years earlier.<sup>3</sup>

There were more than three dozen specifications set forth in the Laws of the Indies. One was that the plan was to be decided upon before any construction, and it was to be ample in scope to allow for future growth. Sufficient space was to be allowed so that if the town grew, it could do so in a symmetrical fashion. Another identifying feature of the Spanish-American town plan was the plaza. For coastal towns, the regulations prescribed a location for the plaza near the shore and for inland cities in the center of the town. The length of the plaza was to be at least one and a half times its width. Maximum and minimum

Page 2

Statement of Significance (continued)

dimensions for the plaza were also set forth. Another distinctive feature of the Spanish town plan were streets running parallel and perpendicular to the central plaza. The resulting pattern took the form of a gridiron or checkerboard with straight streets intersecting at right angles.<sup>4</sup>

The regulations also provided precise guidelines for the location of important buildings. The main church of a coastal city was planned to reside near the harbor and face the plaza. Other sites around the plaza were to be assigned for the town hall, the customs house, arsenal, a hospital and other public buildings. The remaining lots around the plaza were provided for shops and dwellings for merchants.<sup>5</sup>

The Laws of the Indies regarding town planning remained virtually unchanged during the entire period of Spanish rule in the Western Hemisphere. Even beyond that time they influenced the plans of towns laid out by the Mexican government in North America. Literally hundreds of towns in the Western Hemisphere were planned in conformity with the Laws--a phenomenon unique in modern history.<sup>6</sup>

The plan of St. Augustine is a good example of Spanish plans for coastal towns. Its most characteristic feature is the plaza, oriented toward the water. Before the early eighteenth century only the governor's house actually fronted the plaza. During the eighteenth and early nineteenth centuries, the plaza became surrounded by a cluster of civic and religious buildings, including the Bishop's House (later the British Statehouse and Spanish provisional church), the Accountancy and Treasury Building, the public school, and the parish church (now the Basilica-Cathedral). The plaza itself contained several colonial structures, most notably the non-extant stone guardhouse and the still standing Constitution Monument (photo 22).<sup>7</sup>

Furthermore, the regularity of the St. Augustine town plan contrasts greatly with the plan of English colonial towns which were generally laid out using a meads and bounds survey system. The latter towns were consequently highly irregular and organic rather than centrally planned.<sup>8</sup>

Two themes--the military and religion--dominated the history of St. Augustine during the First Spanish Period from 1565 until 1763. St. Augustine was a classic example of a Spanish presidio military settlement. Under Spanish rule neither St. Augustine nor the surrounding geographic area that became Spanish Florida were densely settled or intensively developed. The area contained none of the attractions which brought settlers to other regions of the Spanish colonial empire. There were no gold or other precious metals, no highly fertile agricultural

Statement of Significance (continued)

land, and no sedentary Indian population available as a source of labor. Instead of a mining, agricultural, or commercial settlement, St. Augustine served as a military outpost and a point of departure for Spanish missionaries seeking to Christianize Indians living in outlying areas.

St. Augustine was first and foremost a strategically important outpost in the Spanish Caribbean defense system. Spain retained St. Augustine and the surrounding province of Florida as a buffer zone against foreign intrusion into more economically valuable areas of its colonial empire. The town served as a military base for protecting the Spanish treasure fleet as it sailed homeward annually along the Gulf Stream laden with gold, silver and other valuable cargo. It enabled the Spanish to prevent foreign encroachment into the Gulf of Mexico, the key to the riches of New Spain. Following the founding of Virginia and the subsequent French exploration and settlement of the Mississippi River Valley, St. Augustine served Spain as a bastion against English and French expansion into the Southeast. Because of its strategic importance, it was attacked at various times by the English, the French, pirates, and British colonists from the north. In order to prevent the occupation of St. Augustine, the Spanish developed an elaborate system of defense.\* The bulwark of the Spanish defenses and the most significant historic property in the St. Augustine Historic District is the Castillo de San Marcos, constructed during the late 17th century (photo 16).<sup>9</sup> The Castillo is a nationally significant property and as such is a National Historic Landmark.

The military remained an important theme in the history of St. Augustine following the colonial period. The principal property representing the post-colonial military in St. Augustine is the St. Francis Barracks and its auxiliary buildings (photo 20). The St. Francis Barracks is the principal structure within the complex of buildings located upon the military reservation that houses the headquarters detachment of the Florida National Guard. The site occupied by the St. Francis Barracks has served religious or military purposes since it was first settled by Franciscan missionaries upon their arrival in 1577, twelve years after the founding of America's first permanent settlement. For the following two centuries the Franciscans maintained a convent and monastery on the site, before abandoning it to control of the British in 1764. During their twenty year period of occupation, the British converted the structure to military use. In subsequent order, the Spanish, who returned to occupy Florida in 1784, and the Americans, who assumed control of the peninsula in 1821, maintained military use of the site. Throughout the more than four centuries of occupation, St. Francis Barracks, a name conferred officially upon the structure about a century

Statement of Significance (continued)

ago, has been destroyed and rebuilt a number of times. The structure appears today much as it did more than two centuries ago, one of the Ancient City's landmark colonial buildings. Since 1907, the structure has served as the headquarters for the Florida National Guard.<sup>10</sup>

Successor to the Florida Militia, created by the state's first General Assembly in 1845, the "Florida State Troops," as the organization was known in 1907, operated without recognition by the federal government, like all other state military groups. In 1903, however, Florida became the first state to adopt for its militia the same table of organization, arms, and methods of discipline employed by the corresponding federal services. In that same year the National Guard Association was formed and in 1909 the name of the Florida organization was formerly changed to the Florida National Guard.<sup>11</sup>

In addition to its military function, St. Augustine and its environs became a point of departure for Spanish missionaries seeking to Christianize Indians in surrounding regions. Most, if not all, mission sites and Indian settlements were located beyond the limits of the St. Augustine Historic District. Nevertheless, the district has religious significance for its association with St. Francis Barracks and the Cathedral Parish church (photo 21), one of the oldest Catholic religious structures in the United States and the seat of the first bishopric in Florida.<sup>12</sup>

The St. Augustine Historic District is also significant in the area of commerce, particularly for its association with the development of the Florida tourist industry. After the United States acquired Florida in 1821, an influx of new settlers arrived in the territory, including St. Augustine. Some Spanish subjects, particularly the Minorcans, remained in East Florida, but the population of St. Augustine and the surrounding area became increasingly English speaking. A change of attitude towards commercial development accompanied the change of flags as northern speculators and entrepreneurs saw potential fortune in the Ancient City. Real estate speculation fueled a boom during the early years of the territorial period, but transportation and health problems limited its effect in St. Augustine and the surrounding area. Commercial citrus production, a part of the economy of Florida since the first Spanish period, was moderately successful until a serious freeze occurred in 1835. Other agricultural enterprises, such as silk production, likewise met with limited success or outright failure.<sup>13</sup>

Despite the expectations of many, the economic boom of the early territorial period was short-lived. An inadequate system of transportation proved to be a major obstacle to the development of St.

Statement of Significance (continued)

Augustine and the surrounding county. Natural barriers, particularly the shifting sandbar at the entrance to the St. Augustine harbor and the swamplands which comprise much of the land area of the county, hindered access to the town. From a military viewpoint, the barriers formed an ideal defense position. They were, in fact, a major reason for the selection of St. Augustine as site of Spanish settlement. Once entrenched there, the Spanish were virtually immovable and readily able to defend themselves against an invading force.<sup>14</sup>

The natural barriers of St. Augustine proved, however, impediments to travel and commercial transportation. Large cargo vessels navigated the harbor entrance at great risk and frequently ran aground on the treacherous sandbar. During the 1830's most traffic between St. Augustine and outside areas shifted from the port to the safer, if less direct, land route along the Bellamy Road from Picolata on the banks of the St. Johns River. The Bellamy Road, however, was little more than a modestly developed Indian trail, traveled by slow moving wagons and stagecoaches. Lacking adequate transportation to the agricultural regions of the interior, the former capital of East Florida became isolated. It declined in importance when compared with the booming cotton producing region of Middle Florida. Despite its isolation, St. Augustine began developing one important aspect of its economy during the territorial period. Invalids seeking refuge from harsh northern winters arrived annually, and promoters such as Forbes and Vignoles publicized St. Augustine as a health resort. Even with the winter tourist trade St. Augustine remained poor and relatively unchanged until the outbreak of the Seminole War in 1835. The Seminole War produced only temporary economic prosperity, however. With the agricultural infrastructure of the surrounding area largely destroyed during the course of the war, St. Augustine entered a period of economic decline during the 1840s.<sup>15</sup>

The Civil War did little to improve economic conditions in St. Augustine. By 1865 the city was physically dilapidated and economically deteriorated. The Civil War had cut off the seasonal tourist trade and further disrupted local agriculture. Many of the male residents of the area abandoned their farms and joined the Confederate Army. Following the war St. Augustine retained a backward economy based largely on subsistence agriculture. Its economic development was inhibited by geographic isolation, a lack of marketable cash crops, and the absence of adequate transportation facilities. As a measure of conditions there, while the population of Florida increased by one-third between 1860 and 1870, the population of St. Augustine declined, totaling less than that of 1830.<sup>16</sup>

An inadequate system of transportation continued to be the major

## Statement of Significance (continued)

-impediment to the development of St. Johns County following the Civil War. During the late 1860s the major avenue of transportation in the county remained the primitive stage route from Picolata. The transportation problems of St. Augustine and other isolated regions of northeast Florida diminished during the early 1870s when railroad construction began. In 1870 the St. Johns Railroad completed a line from Tocol to St. Augustine, following the route of a mule drawn tram line the company had begun in 1858. Subsequently, the company added iron rails and factory built locomotives. An even more important railroad, the Jacksonville, St. Augustine and Halifax, reached St. Augustine in 1883. The construction of railroads marked a new period in the history of St. Augustine. It served as a catalyst for the revitalization of the city and for the growth of its economy and population.<sup>17</sup>

While the construction of the railroad was the key event in the development of the city during the late nineteenth century, the key individual was Henry M. Flagler. Flagler visited St. Augustine in 1885 and envisioned the Ancient City becoming the Winter Newport, a resort center for wealthy northerners. To that end Flagler constructed two major hotels in St. Augustine, the Ponce de Leon and the Alcazar, and subsequently purchased a third, the Cordova (photo 23), to add to his complex. He later established the offices and shops of the Florida East Coast Railway at St. Augustine, providing another major source of employment for residents of the county. The Flagler Boom left an indelible impression on the physical appearance of St. Augustine. Many of the architecturally significant commercial and residential buildings in the district date from that period (photos 23-24, 26-27, 28).<sup>18</sup>

The Flagler era in St. Augustine and St. Johns County had run its course by the first years of the twentieth century. During the 1890s, particularly after 1895 when a severe freeze devastated the citrus industry in North Florida, Henry Flagler increasingly focused his attention on his railroad and hotel developments in the southern part of the state. Nevertheless, St. Augustine continued attracting tourists and winter residents at a steady if unspectacular rate. Despite the fears of many, the local tourist industry prospered during World War I, as many wealthy tourists who previously traveled overseas instead came to Florida and visited St. Augustine. In 1917, the construction of the Dixie Highway, a brick road linking St. Augustine to Jacksonville further augmented the transportation system of the city. As was true with the railroad, settlement and economic development, particularly tourism, followed its course and the course of other roadways which were built to the city during the 1920s.<sup>19</sup>

A Florida land boom followed World War I. Although concentrated in

Page 7

Statement of Significance (continued)

south Florida, it stimulated growth in all areas of the state, including St. Augustine.\*° Many significant commercial and residential buildings in the St. Augustine District date from the boom time, including the Atlantic National Bank, the only true skyscraper in the Ancient City (photo 28). An architectural style found in the St. Augustine Historic District in significant numbers during the 1920s is the Spanish Revival (photo 28). The Spanish Revival was closely associated with the Florida boom. In some ways the Spanish Revival was a natural extension of the Spanish Colonial architecture in St. Augustine. Furthermore, many of its distinctive elements were pioneered in the Spanish Renaissance buildings constructed during the Flagler era and Mission Revival buildings constructed contemporaneously in California. The style was popularized during the Panama-California International Exposition at San Diego in 1915, and by the 1920s had swept California, Florida and other sunbelt states. The prototype of the style in Florida was Villa Vizcaya, built in Miami from 1914-1916 for Chicago industrialist James Deering, whose family had formerly wintered in St. Augustine. The architect most closely associated with the Spanish Revival is Addison Mizner, who designed a number of outstanding Spanish Revival Buildings in Palm Beach, Boca Raton and other Florida cities.\*¹

The St. Augustine Historic District also has political significance at the local level. Since its founding in 1565 St. Augustine has served as the seat of government for the Spanish and the British in the colonial province of Florida. Since 1821 it has served as the county seat of St. Johns County. Together with Escambia County, St. Johns County is the oldest political subdivision of the State of Florida. It dates from July 21, 1821 when Andrew Jackson, as military governor of the territory, divided East and West Florida into counties. Escambia County encompassed the area between the Perdido and Suwannee Rivers, and St. Johns County the territory east of the Suwannee.\*\* Among the important government buildings are the St. Johns County Courthouse, located in the former Cordova Hotel (photo 23), and Government House, the former United States Post Office now the headquarters of the Historic St. Augustine Preservation Board. Government House, completed in 1935, is the most recently constructed building considered contributing to the district.

Finally, the St. Augustine Historic District is significant for its architecture, spanning the period 1672 to 1935. While the district is most noteworthy and renowned for its colonial architecture, the pre-1821 buildings within its boundaries number slightly more than thirty and form a relatively small percentage of the total number of buildings. Other significant architectural periods represented in the district include the Territorial Period (1821-1845), the Flagler Era (1880s and 1890s) and the Florida Boom (1920s). Distinctive architectural styles include Spanish

Statement of Significance (continued)

Colonial, the Carpenter Gothic, Second Empire, Moorish Revival, the Queen Anne, the Colonial Revival, the Spanish Revival and the Bungalow (photos 23-28).

The district has further architectural significance for its association with a number of important architects. Among them was Alexander Jackson Davis, perhaps the most influential architect practicing in the United States prior to the Civil War. He provided illustrations for the influential works of designer Andrew Jackson Downing and designed a number of state capitols: Indiana, Illinois, Ohio, and the best known, North Carolina. He designed many buildings in the Greek Revival and Italian Villa styles, but is best remembered for his Gothic Revival work. He popularized Gothic architecture in the United States with his book Rural Residences published in 1837. His clients included author Washington Irving, inventor Samuel F. B. Morse, and New York City Mayor William Spaulding. For Spaulding he designed "Lyndhurst" which later served as the residence of Jay Gould and presently is a house museum operated by the National Trust for Historic Preservation.<sup>22</sup> His work is represented in the St. Augustine District by the Bronson Cottage at 252 St. George Street (photo 25).

Another important architect whose work is represented in St. Augustine is James Renwick. Renwick was a pioneer in the introduction of the Romanesque and Second Empire styles to the United States. He is recognized today as the architect of Grace Church and St. Patrick's Cathedral in New York City and the Smithsonian Institution in Washington, D. C. Renwick was a long-time winter resident of St. Augustine. After a fire gutted the Cathedral of St. Augustine in 1887, Renwick was chosen as the architect for the reconstruction. He added the bell tower (photo 21) and designed the bishop's throne, the pulpit, and the altar of the Blessed Virgin to the left of the main altar.<sup>24</sup>

Franklin W. Smith was a contemporary of Renwick in St. Augustine. Originally from Boston, he introduced the Moorish Revival Style and poured concrete construction to St. Augustine. He designed and built the largest of the Moorish Revival buildings, the Cordova (originally Casa Monica) Hotel, during the late 1880s (photo 23). Impressed with this innovative construction material, Henry Flagler had his great hotels and churches constructed of poured concrete. Smith was one of the great visionary architects of the Victorian period and his work is prominently featured in St. Augustine.<sup>26</sup>

From the colonial period, one of the most significant architects was Mariano de la Rocque, who served as the Royal Engineer in East Florida from 1784-1793. Rocque designed the parish church, now the

Page 9

Statement of Significance (continued)

Basilica-Cathedral. He also drew several of the best colonial maps of the city, which are now standard references for archaeologists and historians.<sup>27</sup>

Professional schools of architecture were mainly a post-Civil War phenomenon in the United States. As a result, many of the early practitioners were either builders or engineers who designed buildings on the side. One was S. Bangs Mance, who designed the Lyon Building at the corner of King and St. George Streets and the houses at 11 and 15 Bridge Street.<sup>28</sup>

Notable among twentieth century professional architects who lived and worked in St. Augustine were Fred Henderich and F. A. Hollingsworth. Henderich was the outstanding local designer of bungalows. Characteristic of his work was natural finish wood shingles, palmetto tree porch posts, and coquina fireplaces and chimneys. He designed many houses along south St. George Street and the large residence at 178 Avenida Menendez.<sup>29</sup>

F. A. Hollingsworth was noted for his application of the Spanish Revival style to many buildings in St. Augustine. During the 1920s he redesigned the Moorish Revival Vaill Block in this style and was the architect of the Atlantic Bank Building, St. Augustine's only skyscraper (photo 28). He was also a restoration architect. He did restoration work for the Florida National Guard on the St. Francis Barracks after the 1916 fire (photo 20), for the Carnegie Commission during the 1930s, and for the St. Augustine Historical Society during the early 1950s.

The St. Augustine District also has archaeological significance. Since the 1930s archaeologists have conducted surveys and excavations within its boundaries. The largest and most significant site within the district is the town plan itself which dates to c. 1600. Additional sites are spatially distributed within the blocks and lots which form the town plan. They include the foundations of buildings and outbuildings, wells and trash pits. Historic archaeology has provided the basis for the reconstruction of many buildings in St. Augustine. The archaeological sites within the district are an important component of its significance.

Statement of Significance (continued)

The St. Augustine Historic District numbers among Florida's most architecturally significant areas. It contains the greatest concentration of colonial buildings in the state and additional significant buildings from the Flagler and Florida Land Boom Periods of the late nineteenth and early twentieth centuries. Its built environment is closely associated with the founding, settlement and subsequent development of the nation's oldest city during the Spanish, British and United States periods of occupation. Its architectural significance is enhanced by associations with a number of important architects and builders, among them Alexander Jackson Davis, James Renwick and Franklin W. Smith.

Beyond its architecture, the significance of the St. Augustine District is based on its association with the individuals and groups who resided within its limits or who were responsible for its development. These individuals are too numerous to list comprehensively, but include Pedro Menendez de Aviles, the town's founder, Governor Mendez Canco, who laid out its present plan, and Henry Flagler, who revitalized it during the late nineteenth century.

The district is also associated with events that have proved significant to the history of St. Augustine, the State of Florida, and the United States. St. Augustine was founded in 1565 and settled on its present site in 1566, making it the oldest continuous settlement in the United States. Subsequently, it was associated with important events that influenced the historical development of the southeastern area of our nation. It was successfully defended by Spanish despite assaults by Sir Francis Drake in 1586, Governor James Moore of South Carolina in 1702, and Governor James Oglethorpe of Georgia in 1740. During the late nineteenth century it was the center for Henry Flagler's development of a railroad and hotel empire which opened much of the east coast of Florida to development and helped formed the economic character of the state.

St. Augustine is one of the most historically significant cities in the United States. Its historic district contains properties which have historical, architectural and archaeological significance up to the national level. It is an architectural mosaic, including a variety of buildings embodying a number of different styles and periods of development. While the colonial buildings are an outstanding and integral component of the district, they are relatively few in number and, in many cases, have been substantially altered. The great majority of buildings contributing to the district date from the post-colonial period. They, too, form an integral part of the St. Augustine Historic District.

VERBAL BOUNDARY DESCRIPTION (continued)

The boundary generally follows the plan of the colonial city of St. Augustine. It follows the lines of the colonial city on the north and west, as defined by Orange Street and Cordova Street respectively. On the east it is defined by the Matanzas Bay, a natural barrier. The southern boundary marks the extent of the concentrated development of the colonial city. The overall boundary extends to the west, beyond the limits of the colonial city, to include the Ponce de Leon and Alcazar Hotel, two of the landmark buildings in St. Augustine.

ST. AUGUSTINE RECONSTRUCTIONS

**SJ# refers to file number of the property in the Florida Master Site File, Florida's State Inventory. In 2010, reconstructions that were State-owned came under the management of the University of Florida, in accordance with Chapter 267.1735, Florida Statutes, enacted in 2007. UF numbers refer to the University of Florida's number assigned to it for management purposes. The other properties are owned by private individuals or non-profit organizations.**

**118 Avenida Menendez Worth House/ Miguel Ysardy House (SJ196)/Not UF**

This two and one-half story Spanish Colonial Style building at 118 Avenida Menendez, known as the Worth House, was reconstructed in 1961. The walls are constructed of coquina, the stone taken from the original house and moved across the street to rebuild the former residence on a new site. It is not stuccoed, although covering masonry walls with plaster was a common practice for colonial buildings. A wooden balcony with spindle balustrade extends from the front (north) and an open two-story porch projects from the rear. The gable roof is shingled and wooden blinds accent the windows. The building is on the bayfront and near the Plaza. This historic reconstruction was rebuilt "stone by stone" from the coquina of the original colonial structure. The existing structure represents the house built by Miguel Ysardy between 1791 and 1799 on Marine Street, on a site now occupied by a restaurant and parking lot. It served as one of the first hotels in the city, operating under the names of Union Hotel, Levington's and Bridier's. In 1821 the Reverend Andrew Fowler occupied a room in the hotel while establishing Trinity Parish Episcopal Church and administering to those stricken during the yellow fever epidemic. General W. J. Worth owned the home from a time prior to the Mexican War. Author Constance Fennimore Woolson, was an occupant. An 1893 *Tatler* article mentions that Dr. George E. Walton, physician and author of medical works, repaired and remodeled the house while it was in his possession. Sanborn maps show that the building was used for a variety of purposes including the Chamber of Commerce headquarters (1917) and a tourist club and apartments (1924). A frame addition in existence from 1884 to 1910 was used for commercial purposes. The building was demolished in 1961 and reconstructed on a lot closer to the bayfront.

**3 Aviles Street Spanish Military Hospital (SJ217)/UF3924/Adams**

This one and one-half story Spanish Colonial Style building, known as the Spanish Military Hospital, was reconstructed by the Historic St. Augustine Preservation Board at 3 Aviles Street in 1966. The exterior is both masonry and wood, with the concrete blocks covered with stucco. A wooden shed projects from the rear (east) and a one-story open porch with square wood posts extends from the shed to the opposite end of the rear wall. Three shed-roof dormers add height to the half story. A six-panel door gives access to the house from the yard (north). The house is set on the street line, with the back yard enclosed by a wooden fence. It is located on a narrow brick street in one of the oldest sections of St. Augustine.

This historic reconstruction at 3 Aviles Street represents an old Spanish hospital of the late 18<sup>th</sup> century. At the end of the First Spanish Period (1763) a military hospital stood on a site across the street from the present

**St. Augustine, St. Johns Co., FL**  
**Description**

reconstruction. During the British occupation (1763-1784), a carpenter and builder from Scotland named William Watson remodeled a building across from the hospital. The former stable became Watson's temporary dwelling while a new house was constructed a short distance away. After completion of that house, the temporary residence was converted into a convalescent home. After the return of the Spanish in 1784, the hospital across the street burned, and in 1791 the convalescent home was purchased by the government and used as a military hospital. A map of 1834 indicated the site was once "the new city counsell [sic] house lot." Early Sanborn maps show two one-story frame buildings housing offices and a barber shop between 1884 and 1888. A two-story "veneered concrete" building and two frame buildings replaced the earlier structures. In 1966 the property was purchased by the St. Augustine Preservation Board and the 19<sup>th</sup>-century buildings were demolished for reconstruction of the present structure. The building originally was equipped as it would have appeared in its hospital function and was opened to the public.

**26 Charlotte Street Blacksmith Shop (SJ526)/UF3931/Adams**

This one-story British Colonial Style building, known as the Blacksmith Shop, was reconstructed in 1969 by the Historic St. Augustine Preservation Board at 26 Charlotte Street. The wood frame, board-and-batten building was constructed with building methods similar to those used in the British Period (1763-1784). All structural elements were shaped from pine logs with broad axe and adze, then notched or mortised and pegged. The dirt floor and absence of interior finishing is also typical of the time period. A shed-roofed porch extends from one side.

The historic reconstruction at 26 Charlotte Street represents one of several buildings owned by Alexander Skinner in 1771. In 1782 Skinner sold the buildings to David Morran, who rented one of the buildings to a blacksmith. The property was left in the hands of land agents after Florida reverted to Spanish ownership in 1784. The 1888 Sanborn Fire Insurance map shows the site was occupied by a two-story frame private residence, which was replaced in 1904 by a new two-story frame dwelling. The house stands as an example of British Period (1763-1784) buildings, and reproduces English carpentry of the time.

**58 Charlotte Street Luciano de Herrera House (SJ539)/Not UF**

This one and one-half story Spanish Colonial Style building, known as the Luciano de Herrera House at 58 Charlotte Street, was reconstructed in 1967 by the St. Augustine Restoration Foundation, Inc. It represents a house of the Second Spanish Period (1784-1821). The L-shaped building consists of both masonry and board and batten walls, consistent with early descriptions. The masonry walls are covered with plaster, a practice common in colonial days to protect the walls from moisture. A masonry wall and wooden fence enclose a patio. A shed-roofed dormer gives additional living space to the half story. The building is located on a narrow brick street near the restored area of the city.

This historic reconstruction at 58 Charlotte Street is listed on the 1764 Puente map as a *ripio* (rubblework) house belonging to Juan de Muro. During the British Period (1763-1784) the house was first owned by William

**Description**

Wilson, who made additions, and later by Joseph and Mary Peavett, who owned other property, including the "Oldest House". The Peavetts sold to James Scotland. In a claim to the crown for former properties, Scotland describes the house as a "good stone house consisting of three good rooms and a garrett with a kitchen, and garden well fenced and in a very public situation for trade . . ." William Slater was owner in 1784 when the Spanish returned to Florida. The property was conveyed at that time to Luciano de Herrera. Herrera was one of the eight government appointees elected to remain as a liaison between the old and new regimes. In addition to his property dealing, Herrera acted as mediator between the Indian tribes and the province, and served as a spy for Spain during the American Revolution. He died in 1788 and at that time the property was conveyed to Captain Miguel Iznardy. The many owners following Iznardy included prominent resident George Burt. Sanborn maps show the site was occupied as early as 1884 by a business complex of one- and two-story buildings that housed several businesses. The structure was burned in the 1914 fire, and was left vacant until sometime between 1924 and 1930, when a large parking garage was built. In 1966 the garage was demolished for building of the existing reconstruction, which was opened for commercial use in February 1967.

**206 Charlotte Street William Watson House (SJ541) see (SJ217)/UF3925/Adams**

This two-story building at 206 Charlotte Street was reconstructed in 1968 by the Historic St. Augustine Preservation Board. The two-story open porch on the front consists of square wood posts and a simple balustrade. Exterior accents include wooden blinds and an attic louver. The house represents the type of residence constructed during the British Period (1763-1784). A gate in the masonry fence opens into the yard. A wooden fence on the north side faces a parking lot. The house is adjacent to a narrow brick road in one of the oldest sections of St. Augustine.

This reconstruction of a British Period (1763-1784) residence represents the house of carpenter William Watson. The property is listed on the 1764 Puente map as belonging to Don Juan Jose de Arrarsate. The House is "stone and boards." After a series of transactions, it became the property of James Penman. Watson purchased the property from Penman in 1779. After converging stables on the site of the reconstructed *Hospital Militar*, Watson built his own house on this lot. When Spain regained control of Florida in 1784, the property went to Minorcan leader Father Pedro Camps. The house eventually became the property of a young Minorcan boy, Martin Mateos Kennedy, for whom Father Camps was guardian. His heirs claimed ownership until 1802, when the last descendant died. The house was sold in 1877 to Cesemer Masters by C. Bravo, but disappeared by 1894, probably a victim of the 1887 fire. Sanborn fire insurance maps indicate the area was vacant until 1899, when a stable building, owned by C.A. Masters, was shown on the map. In 1907, Vincent J. Mickler, a tinner, occupied the site, followed by the Acme Machine Company, F.W. Cheatham, proprietor. The Watson House was reconstructed in 1968 by the St. Augustine Historic Preservation Board.

**257 Charlotte Street Manuel de Herrera House (SJ550)/Not UF**

This one and one-half story Spanish Colonial Style building, known as the Manuel de Herrera House, at 257 Charlotte Street was reconstructed by the St. Augustine Historical Society in 1955 and is one of the first historic

**Description**

---

reconstructions done in St. Augustine. It represents a house of the mid-18<sup>th</sup> century. A two-story open porch with chamfered posts and beaded porch railing faces the south yard. The coquina walls have a stucco finish. Wooden shutters accent the windows of this house set on the street line. The building is near St. Joseph's Academy, located in one of the oldest sections St. Augustine.

This historic reconstruction at 257 Charlotte Street was built for use by the Historical Society as a warehouse and museum lab. It represents a house listed in the 1788 Rocque map as "a masonry house, in fair condition, owned by Don Manuel de Herrera." The house disappeared from maps between 1893 and 1899, after which time the property was owned by Charles B. Mickler, and later the Horace Lindsley Family. The society purchased the property in 1946 from James S. Lindsley and built the historic reconstruction, one of the first in the city, nine years later.

**269 Charlotte Street Alexander-Garrido House (SJ551)/Not UF**

This one-story Spanish Colonial style building known as the Alexander-Garrido House at 269 Charlotte Street was reconstructed in 1966 by the St. Augustine Historical Society. It was intended to represent a structure north of the larger Alexander House reconstructed by the Society, but does not strictly conform to shape or location of structures shown on the Rocque map. The L-shaped building is flush to the street with an entrance to the yard through a gate. A one-story open porch extends from the south side. Wooden *rejas* decorate the street side windows and copper downspouts carry water from the flat roof. The house is near the "Oldest House" complex, St. Francis Barracks, and St. Joseph's Academy. It is on a narrow street in one of the oldest sections of town. This building at 269 Charlotte Street was built with the intention of representing a house once owned by William Alexander. The Rocque map shows two buildings north of a larger structure built by Alexander as his residence. The two outbuildings, number 247 and 248, are both masonry structures set flush to the street line. The existing structure is described as representing the rectangular structure number 247; however, it more nearly resembles the L-shaped building closer to the main house. The earlier Puente map lists two tabby houses (numbers 334 and 333) as belonging to Francisco de Leon and Rocque Peycrya. The property was apparently included in the British land grant to William Alexander, a member of the trading firm of Panton, Leslie, and Company. Alexander sold to Don Juan O'Donovan after the return of the Spanish in 1784. The 1790 Quesada list describes the property as belonging to Miguel O'Reilly, an Irish priest who died in 1812. The property was inherited by O'Reilly's brother and sold two years later to Antonio Alvarez. In 1821 the house was purchased by Eliza Lee who retained the property until 1838 when Manuel Garrido became the owner. The Garrido family lived there until 1865, when the property was conveyed to Mary Roddy whose heirs sold it to the Negro [African] Methodist Episcopal Church in the same year. The frame house razed for reconstruction was either built by Roddy or the church. The Historical Society purchased the property in 1957 and built the current structure in 1966.

**271 Charlotte Street Alexander-O'Donavan-O'Reilly House (SJ552)/Not UF**

This two-story Spanish colonial style building known as the Alexander-O'Donavan-O'Reilly House at 271 Charlotte Street was constructed in 1964 by the St. Augustine Historical Society. Typical of many colonial period homes, the house sits on the street line with a gate opening into the yard. It exemplifies the St. Augustine plan of construction with a loggia facing south, a construction method commonly employed for climate control. The entrance to the house is from the loggia. Distinctive features include arches, a second floor open porch with chamfered posts, and angled boards in the shed-roof dormers. The masonry walls have a stucco finish. The building is adjacent to the "Oldest House" complex and near both St. Francis Barracks on the south side, and St. Joseph's Academy to the northwest. It is on a narrow street in one of the oldest sections St. Augustine.

This historic reconstruction at 271 Charlotte Street represents a house built during the British Period (1763-1784), but known to conform to the common Spanish colonial style construction as determined by the 1788 Rocque map sketch. This lot, as well as surrounding property, was granted to William Alexander by the British crown in 1778. Alexander, a member of Panton, Leslie, and Company, a trading firm, constructed a large house on the lot, possibly using some of a former stone structure described on the 1764 Puente map as belonging to the heirs of Antonio de la Cruz. At the close of the British Period, Alexander offered his property for sale separately or as a whole. The house was purchased by John O'Donavan, a second lieutenant in the Hibernia Regiment. O'Donavan, after a clandestine and adventurous romance, married the daughter of Governor Vincente Manuel de Zespedes. He was exiled for a time but returned to the city in 1787 to live with his wife, Dona Dominica Zespedes in either this house or a Marine Street building also owned by O'Donavan. In 1789, the house was sold to Father Miguel O'Reilly, although it was not his residence. Father O'Reilly died in 1812 and two years later the house was purchased by Antonio Alvarez. Alvarez, who also owned the "Oldest House," retained the property until death in 1866. After that time, it passed through various ownerships, including Miss A. M Brooks, William Murray, and George M. Corbett. In 1961, the Historical Society purchased the property together with Corbett Apartments on Marine Street. After archaeological examination of the area in 1962, the existing frame house was razed and construction was completed in 1964 which now houses the Library and Administrative offices of the Society. Sanborn maps indicate that the previous structure was built between 1899 and 1904.

**12 Charlotte Street Sims House (SJ525)/UF 3929/Adams**

The Sims House is a one-story, L-shaped frame with lapped siding building. It has a gable-end roof with split wood shingles, plastered walls and ceiling and wood floors.

This is a frame house typical of the kind built by English refugees from the American Revolution in the 1780s. A silversmith from Scotland named William Sims operated such a shop in St. Augustine during the British Period (1763-1785). The funds for purchase of the property and reconstruction of the house in 1962 were contributed by a descendant of the colonial silversmith, William Sims II, who served as a trustee on the Historic

St. Augustine Preservation & Restoration Commission from 1961 to 1965. The reconstruction was completed in 1964.

**12a Charlotte Street Sims Outbuilding (SJ5580)/UF3930/Adams**

The outbuilding for the Sims House is wood framed, covered with beveled siding. The roof gabled on one end and hipped on the other. It is covered with wood shingles. The reconstruction was completed in 1964.

**27 Cuna Street Wells Print Shop (SJ620)/Not UF**

This one-story English Colonial style building known as the Wells Print Shop, was reconstructed in 1969 by the Historic St. Augustine Preservation Board at 27 Cuna Street. The wood frame building is a representation of the typical gabled structure preferred by British settlers for ease and speed of building. The foundation is coquina wall. Distinctive features include the neoclassical molding around the door and windows. The building is located on the street line in a mixed residential and commercial area of restored St. George Street. This historic reconstruction at 27 Cuna Street represents the Print Shop of William wells, who came to St. Augustine from South Carolina in 1782. Wells arrived with his printing press and, with the aid of his brother John, established the first newspaper in Florida known as *The East Florida Gazette*. In the early 1970s, an operational press printed copies of the historic newspaper as well as producing maps, letterheads, and other miscellaneous printed material. The shop remains for tourists to see but the press has been silenced since 1977. Sanborn maps show this occupied by a two-story, frame, private residence, which was demolished for reconstruction of the existing building

**46 ½ Cuna Street Antonio Jose Rodriguez House (SJ623)/UF3916/Adams**  
**Same as 58 St. George St.**

This one-story Spanish colonial style building known as the Antonio Jose Rodriguez House, was reconstructed in 1969 by the St. Augustine Restoration Foundation, Inc., at 46 ½ Cuna Street. Not typical of colonial structures, the house is not set off of the street line although a street gate opening leads to the building. The entrance to the two-room flat-roofed structure is from the southern loggia. The placement of the loggia and the lack of windows on the north wall were designed for climate control, utilizing summer breezes and eliminating the chill of north winds. This form of construction, known as the St. Augustine Plan, also took full advantage of the warmth of the last rays of winter sun which is oriented toward the south horizon, while creating shade from the hot noonday summer sun. The concrete block wall has been stuccoed, representing a common colonial practice of plastering masonry walls for protection.

This historic reconstruction at 46 ½ Cuna Street is listed on the 1764 Puente map as a two-room tabby house belonging to Antonia Jose Rodriguez. The house was demolished during the British Period (1763-1784). In the early 1970s, the building was used to display the pottery-making techniques, although in the last several years, it has served as an office and supply room. Early Sanborn maps show this site occupied by a three-story hotel

---

known as the Columbia House. The building was demolished around 1965 for reconstruction this and the adjacent Sanchez de Ortigosa House.

**11 King Street Florida Heritage House/Wakeman House (SJ1025)/Not UF**

This two-story Masonry Vernacular building, known as the Florida Heritage House or the Seth Wakeman House, was reconstructed in 1965 at 11 King Street by the Historic St. Augustine Preservation Board. Long wooden balconies with chamfered posts extend from the front and rear (north and south) elevations. The criss-cross design on the railing, a pattern typical of the early American period (1821-1860) is clearly shown on the 1855 Horton View of St. Augustine. Wakeman constructed this building about 1852. The board and batten construction can be seen in a Civil War period photograph in the Photographic Collection at the Florida State Archives. The reconstruction consists of concrete block walls with a stucco finish. The building faces the Plaza in a commercially developed section the city.

The building at 11 King Street is reconstruction of the building once owned by Seth M. Wakeman, a Connecticut merchant who operated a grocery store in the building. A photograph taken during the Civil War shows the building occupied by Union soldiers. Another photograph from around the 1880s shows its function as a store. The building is pointed a dark color with white (or light) trim on the railing and posts of the balcony and around the windows. The 1884 Sanborn map shows a three-story frame building housing a dry-goods store and a "Gentlemen's Store" that was non-existent by 1888. The 1893 map shows a three-story veneered concrete building designed "Lynn's Hotel." The hotel is later called the Algonquin and finally became the Chautauqua Hotel by 1910. It housed restaurants, stores and the Bayview Hotel, and apartments before it was demolished to make way for the existing building.

**74 Marine Street De La Rosa House (SJ1277)/Not UF**

This two-story Spanish Colonial style building known as the De L Rosa House at 74 Marine Street was reconstructed in 1963 by the St. Augustine Historical Society. The design is based on a floor plan in the Rocque map of 1788. A balcony with chamfered posts and jigsaw brackets extends from the south side. Typical of houses of the colonial period, the building abuts the street, and the masonry walls have been covered with plaster. A masonry fence surrounds the garden area. Wooden blinds accent the windows. The house is near St. Francis Barracks, and the "Oldest House" complex. It is on a narrow street in one of the oldest section of St. Augustine.

This historic reconstruction at 74 Marine Street was named for Dona Petrona Perez de la Rosa, a native of St. Augustine, born in 1707. The Puente map of 1764 shows her owning a vacant lot on the bayfront, and "stone and frame houses" west of the lot, designated as 346 in Block K. The property was conveyed to William Greening, an Englishman who died in 1768. The 1788 Rocque map describes a two-story stone house, number 253, as belonging to Juan Joseph Bousquet, the surgeon of the Royal Hospital. By 1790, the house was considered a "rubblework masonry house in poor condition." Antonio de Palma purchased the house,

St. Augustine, St. Johns Co., FL  
Description

conveying it to Francisco Rovira in 1799. After several transactions the house became the property of Jean Ayerault, whose heirs sold the lot and house in 1838 to Juan Pellicer. In 1868, Julia Twanowski bought the house, possibly demolishing the older structure to build a new residence. By 1899, when purchased by George Corbett, the lot was vacant. The St. Augustine Historical Society purchased the lot from Corbett's heirs in 1961, constructing the existing apartment house in 1963.

**21 St. George Street Gallegos House (SJ1882)/UF3905**

This one-story Spanish Colonial style building known as the Gallegos House, at 21 St. George Street, was reconstruction 1963 by the Historic St. Augustine Preservation Board, and formed part of the living history museum, San Agustín Antiguo. Typical of the colonial structures, the house is set on the street line with a gate opening into the yard. The entrance to the two-room ouse is from the southern porch. Te placement of the loggia and the lack of windows on the north wall were designed for climate control, utilizing summer breezes and eliminating the chill of north winds. This form of construction known as the St. Augustine Plan, also took full advantage of the warmth of the lat rays of the winter sun which is oriented toward the south horizon, while creating shade form the hot noonday summer sun. The walls of this reconstruction are made of tabby, a building material of oyster shells, limestone, sand and water, which was used in the colonial period. The stucco finish is typical of the plaster exterior used by the colonists to protect masonry walls. Projecting rain spouts carry water from the flat-roofed building. Wood shutters and *rejas* are distinctive elements which also reflect the colonial stoye. The large yard is completely encircled by a masonry wall and a frame fence was used in the earlier years for gardens, livestock, and outdoor cooking. The yard also contains a reconstruction barrel well and a palm-thatched structure. Although many colonial homes utilized detached kitchens, this house has a masonry stove contained within.

This historic reconstruction at 21 St. George Street represents a house of the average St. Augustine resident of the mid-18<sup>th</sup> century. It appears on the 1764 Puente map as a masonry residence of Martin Martinez Gallegos, an artilleryman. According to the 1788 Rocque map, the house was occupied by a three-story stone and frame building serving as a hotel from 1888 until 1930. The hotel underwent numerous name changes to include San Salvador, The Abbey, The Arlington, Tourist Inn, and the Rectors. From 1963 until 1976, the reconstructed house served as an Information Center and Ticket Office for the restored area. In 1976, it was opened to the public, depicting the life-style of a late First Spanish period family.

**22 St. George Street Ribera House (SJ1883)/UF3906/Adams**

This two-story Spanish colonial style building at 22 St. George Street, known as the Ribera House, was reconstructed in 1964 under the auspices of the St. Augustine Restoration Foundation, Inc., and formed part of the Historic St. Augustine Preservation Board's living museum, San Agustín Antiguo. Typical of colonial structures, the house is set on the street line with a gate opening into the yard. The entrance to the four-room house is through the southern loggia. The placement of the logia and the lack of windows on the north wall were designed for climate control, utilizing summer breezed and eliminating the chill of north winds. This form

---

of construction concept resembles the more modest two-room Gallegos House across the street. The coquina walls represent a commonly used building material after 1702. The stucco finish is typical of the plaster exterior used by the colonists to protect masonry walls. A wooden balcony projects above the street and *rejas* cover the windows. Interior shutters provide additional protection when necessary. The Tuscan columns of the arched loggia and the molded plaster add distinctive touches. The large yard is encircled by a masonry wall and contains fruit trees and a garden. It was used in colonial days to grow foods, raise livestock, and for outdoor cooking. The detached kitchen is set back on the lot.

This historic reconstruction at 22 St. George Street represents a house of a well-to-do St. Augustine family of the mid-18<sup>th</sup> century. The 1764 Puente map lists artilleryman Juan de Ribera as the owner. The existing structure was built on the foundations of the original residence, conforming to the dimensions and floor plan of that house. San maps show that the site was occupied in 1888 by a two-story brick building housing a "Fruit" and "Millinery" shop. In 1893, the store is labeled "B & S" followed by "Jewelry," "Grocery," "Barber," and "Music." By 1930, the first floor contained stores and the second floor housed the Parks Hotel. The Parks operated until it was razed for construction of the Ribera House, at which time archaeological research uncovered the foundations.

**25 St. George Street**                      **Gomez House (SJ1884)/UF3909/Adams**  
**(27)**

This one and one-half story Spanish Colonial style building at 25 St. George Street known as the Gomez House was reconstructed in 1971 by the Historic St. Augustine Preservation Board and formed part of the Preservation Board's living history museum, San Agustin Antiguo. The board and batten structure is representative of a minority of frame structures in the mid-18<sup>th</sup> century. The house is set on the street line with a wooden gate opening into the fenced-in yard. The yard was used for gardening, raising livestock, and outdoor cooking; it contains a coquina well. A ladder in the one-room house leads to the attic sleeping quarters. Windows can be secured by the interior wooden shutters.

This historic reconstruction at 25 St. George Street represents a house of a typical St. Augustine resident of the mid-18<sup>th</sup> century. The Puente map describes it a a "house of boards" owned by infantryman Lorenzo Gomez and his wife Catarina Perdomo. The house was demolished during the British Period (1763-1784).

**31 St. George Street**                      **Maria Triay House (SJ1886)/UF3908/Adams**  
**(29)**

This one and one-half story Spanish Colonial Style building, known as the Maria Triay House at 31 St. George Street, was reconstructed in 1964 by the Historic St. Augustine Preservation Board. Typical of colonial structures, the house is set on the street line with a gate opening into the patio. The entrance to the two-room house is from the southern side. The placement of the patio and the lack of windows on the north wall were designed for climate control, utilizing summer breezes and eliminating the chill of the north winds. This form of construction, known as the St. Augustine Plan, also took full advantage of the warmth of the last rays of

---

winter sun which is oriented toward the south horizon, while creating shade from the hot noonday summer sun. A sleeping loft is nestled under the highly-pitched shingled gable roof. The patio with overhanging grape arbor is shared by the neighbor to the south. A coquina wall on the south protects a portion of the property. This historic reconstruction at 31 St. George Street was built on the foundations of a house dating to the mid-18<sup>th</sup> century. The house was sold to Francisco Triay by Juan San Salvador shortly after Florida returned to Spanish rule in 1784. They remained in the Triay family through 1834, receiving its current name from Francisco's wife, Maria. Early Sanborn Fire Insurance Maps show the site occupied in 1888 by a one and one-half story frame building serving as a private residence and "notions and book" shop. It is designated "confectionery" by 1899. In 1904, a two-story frame building was on the site, which is listed as a rooming house by 1958. Occupants during this time included members of the Roger, Baya, and Benet families, all descendents of Minorcan colonists who migrated to St. Augustine from New Smyrna in 1777 or arrived at about that time. Benjamin Baya, in partnership with prominent merchant Bartolo Genovar, was a councilman in 1904. Since 1966, the reconstructed Triay House has been occupied by an artist's studio, an example of commercial usage of historic reconstructions.

**33 St. George Street Pedro de Florencia House (SJ1887)/UF3923/Adams**

This one-story Spanish Colonial Style building at 33 St. George Street, known as the Pedro De Florencia House, was reconstructed in 1964 by the Historic St. Augustine Preservation Board. Typical of colonial structures, the house is set on the street line with a gate opening into the yard. The principal entrance to the house is from the southern patio. The walls of this reconstruction are concrete block and wood siding. The stucco finish is typical of the plaster exterior used by the colonists to protect masonry walls. The flat roof and drain spouts are also elements common to colonial period construction. The patio with overhanging grape arbor is shared by the neighbor to the north.

This historic reconstruction at 33 St. George Street represents a house of the average St. Augustine resident of the mid-18<sup>th</sup> century. It appears on the 1764 Puente map as a rectangular stone dwelling of infantryman Pedro de Florencia. Sanborn maps give evidence of later buildings on the site. In 1888, a two-story private residence occupied the lot. Around 1965, the St. Augustine Restoration and Preservation Board acquired the property, razing the existing structure in order to build this reconstruction. The building currently houses a Spanish restaurant and is an example of commercial usage of historic reconstructions.

**35 St. George Street Gonzalez House (SJ5576)/UF3921/Adams**

The Gonzalez House is a one-story stuccoed concrete block masonry building with a flat roof, exposed beam ceiling, plastered interior walls, and central heat and air. There is no plumbing. The floors are tabby concrete. The Gonzalez House is a reconstruction of a building that was originally constructed about 1740 and served as a dwelling for a Spanish soldier attached to the garrison at the Castillo de San Marcos. The land was purchased by the Historic St. Augustine Preservation Board with funds provided by Elizabeth Morley Towers, at the time a member of the Board. The 1979 reconstruction was financed through a grant from the Florida Bicentennial

Commission, whose executive director, Dr. William R. Adams, was later appointed director of the Historic St. Augustine Preservation Board.

**37-39 St. George Street De Hita House (SJ5577)/UF3920/Adams**

This building has stuccoed concrete block masonry walls. The De Hita House has a hip roof covered with wood shingles. It has an open loggias and tabby concrete floors, plastered interior walls, exposed beam ceilings and central heat.

The De Hita House is a reconstruction of a building that was originally constructed about 1740 and served as a dwelling for a Spanish soldier attached to the garrison at the Castillo de San Marcos. It has been used for museum interpretation since its reconstruction in 1979. The land was purchased by the Historic St. Augustine Preservation Board with funds provided by Elizabeth Morley Towers, at the time a member of the Board. The reconstruction was financed through a grant from the Florida Bicentennial Commission, whose executive director, Dr. William R. Adams, was later appointed director of the Historic St. Augustine Preservation Board.

**42 St. George Street Jose Salcedo House (SJ1889)/UF3927/Adams**

This two-story Spanish Colonial Style building at 42 St. George Street, known as the Jose Salcedo House, was reconstructed in 1962 by the Historic St. Augustine Preservation Board. Typical of colonial structures, the house is set on the street line with a gate opening into the yard. The entrance to the house is from the southern patio. The placement of the patio and the lack of windows on the north wall were designed for climate control, utilizing summer breezes and eliminating the chill of north winds. This form of construction, known as the St. Augustine Plan, also took full advantage of the warmth of the last rays of winter sun which is oriented toward the south horizon, while creating shade from the hot noonday summer sun. A wooden wrap-around balcony with chamfered posts extends above the street on the east side and over an open patio on the south. The coquina wall is covered by stucco (except on the east side), which is typical of the plaster exterior used by the colonists to protect masonry walls. The yard, once used for planting, raising livestock, and outdoor cooking, is encircled by a masonry wall and wooden fence. A detached masonry kitchen and frame smokehouse are situated behind the main structure. A well is contained on the original site.

This historic reconstruction at 42 St. George Street was built on the foundations of a coquina house listed on the 1784 Puente map as belonging to Joquin Blanco. After the British Period (1763-1784) it passed through the hands of Captain Andres Rainsford to Don Pedro Jose de Salcedo, a Captain of Artillery. The historic reproduction is based on the appearance of the house during Salcedo's ownership. For a brief time in the 1790s, the house served as the residence of General Jorge Biassou, a Black Haitian revolutionary leader who retired to St. Augustine after fighting the Spanish in Santo Domingo. The 1888 Sanborn map shows a two-story frame structure on the site designated as a dry goods store. This later became a "Gasoline Stove Store," "Plumber," and "Private res." The reconstruction was used to house a "Candy Kitchen," with the second floor functioning

---

as a private residence. It is an example of commercial usage of a historic reconstruction. This house, as well as the Arrivas House and Gallegos House, was dedicated in 1963.

**42 ½ St. George Street Salcedo Kitchen (SJ5579)/UF3926/Adams**

The Salcedo Kitchen is a one-story coquina masonry building with a north/south shingled gable roof. A loggia runs across the east elevation. A masonry oven and fireplace are in the south wall. The floor is masonry tabby. The Salcedo Kitchen is a reconstruction of the kitchen that served the Salcedo House. It was uncovered by archaeologists based on a 1788 map showing the wall footing and fireplace hearth. That information provided the basis for the 1965 reconstruction as part of the Restoration effort.

**55 St. George Street De Burgo-Pellicer House (SJ1892)/UF3912 (check various addresses)**  
**(53)**

This one and one-half story British Colonial building at 57 St. George Street, known as the De Burgo-Pellicer House, was reconstructed in 1977 by the Historic St. Augustine Preservation Board and formed part of the Preservation Board's living history museum, San Agustin Antiguo. The house represents a wood frame duplex constructed around 1785. A description in 1791 mentions a "house of wood covered with shingles with its kitchen of the same." The duplex is set back from the street, each side consisting of an entrance door flanked by two windows. Dormers project from both sides of the gable roof. A wooden outbuilding occupies the rear lot of each half of the house. Paneled shutters decorate the exterior.

This historic reconstruction at 57 St. George Street represents the house of two members of the group of immigrants who arrived in St. Augustine from New Smyrna in 1777. Both Francisco Pellicer a Minorcan, and Jose Peso de Burgo, a Corsican, were leaders of the ninety men, women, and children who fled the hardships of the Turnbull colony in New Smyrna. Pellicer, a carpenter by trade could well have built his own house and perhaps assisted Peso de Burgo. The land was jointly purchased by the men in 1780. Pellicer sold his property to Demetrios Fundulakis Sanchez. This house represents the Minorcan-Greek-Italian element that settled during British occupancy and remained through the Second Spanish Regime (1784-1821), strengthening ties still prevalent in the city. Early Sanborn maps show two buildings occupying the site in 1888; the north half contains a one and on-half story grocery. Both buildings changed over the years but maintained commercial usage. They were demolished after 1958 to clear the site for this reconstruction. The building was dedicated March 31, 1977.

**58 St. George Street Jose Sanchez de Ortigosa House/Coquina Warehouse (SJ622)/UF3918/Adams**

This one and one-half story Spanish Colonial style building was reconstructed in 1966 by the St. Augustine Restoration Foundation, Inc., at 58 St. George Street (formerly addressed as 46 Cuna Street). Conjectural data suggests that the colonial structure was built in the early 1800s, perhaps during the early years of the Territorial period (1821-1845). It is known that the site was once a part of the land owned by one of the early settlers

---

named Jose Sanchez de Ortigosa. The building is a combination of masonry walls and board and batten second floor. The stucco exterior represents a common practice of stuccoing masonry walls for protection. This historic reconstruction at 46 Cuna Street represents an "old coquina warehouse" that appears on a mid-19<sup>th</sup> century plat of the area. The property was owned over a long period of time by Jose Sanchez de Ortigosa, who maintained an expanse of land from St. George Street to Spanish Street. The Sanborn fire insurance maps indicate this lot and nearby lots were occupied by the three-story "Colombia House Hotel," which was demolished in 1966 for reconstruction of the existing building.

**59 St. George Street Sebastian de Oliveros House (SJ1894)/Not UF**

This two-story Spanish Colonial Style building, known as the Sebastian de Oliveros House at 59 St. George Street, was reconstructed in 1965 by the St. Augustine Restoration Foundation, Inc. It represents a house of the second Spanish Period (1784-1821). The coquina walls are covered with stucco, a practice followed by the colonists in order to protect masonry walls. The first floor consists of three rooms and a loggia area. Exterior wooden blinds accent the windows. The house abuts the street on a corner lot. It is located in the center of the restored area.

This historic reconstruction represents a house built by Sebastian de Oliveros during the Second Spanish Period (1784-1821). Oliveros, a native of Corsica, arrived in St. Augustine around 1790 and married a Minorcan girl, Catlaina Usina, in 1795. Oliveros, a mariner, was lost at sea in 1804. Eleven years later, his widow sold the two-story coquina house to another Minorcan colonist, Gaspar Arnau, who also sailed the seas. The house had a masonry wall around the garden, a detached kitchen, a well, and a grape arbor, along with other fruit trees. The structure disappeared between 1888 and 1899. Early documentation shows this was the fourth building on the site: The first was wooden structure; second, a tabby house; third, wood; and fourth, the house represented by the existing structure. A one-story frame building occupied the site from 1899 to 1917, until it was demolished for the building of the existing reconstruction.

**60 St. George Street Jose Sanchez de Ortigosa House (SJ1895)/UF3919/Adams**

This one-story Spanish Colonial Style building at 60 St. George Street, known as the Jose Sanchez de Ortigosa House, was reconstructed in 1966 by the St. Augustine Restoration Foundation, Inc., and formed part of the Preservation Board's living history museum, San Agustin Antiguo. Typical of the colonial structures, the house is set on the street line. The masonry exterior has been stuccoed, the colonial practice of protecting masonry walls with plaster. Drain spouts carry water from the flat roof, and molded stucco and lattice window trim decorate the exterior. The interior window consists of double-hung casement and paneled shutters. It is painted a shade of pink, a color used in colonial days.

This historic reconstruction at 60 St. George Street was built on the site of a home listed on the 1764 Puente map as belonging to Jose Sanchez de Ortigosa. Sanchez, a mariner, is legendary in the city's history for his capture of a shipment of rice when the community was in great need during the War of Jenkin's Ear. He also

was the father of the colorful Francisco Xavier Sanchez, a prominent St. Augustinian in the late colonial period. Early Sanborn maps indicate that since 1888 this site was occupied by a three-story frame building initially called the Cleveland House, but later called the Columbia House. It was used for various purposes between 1904 and 1958, including a meat market, grocery, bike repair shop, and meeting hall for various organizations. The former building was demolished for the building of the present reconstruction, which was leased by the Preservation Board as part of the living history museum, San Agustin Antiguo. Textile making and weaving demonstrations were presented daily in the historic reconstruction.

**62 St. George Street Benet Store (SJ1896)/Not UF**

This one and one-half story Spanish Colonial Style building at 62 St. George Street, known as the Benet Store, was reconstructed in 1967 by the Historic St. Augustine Preservation Board. Typical of colonial style structures, the house is set on the street line. The coquina walls are covered with stucco representing a practice of protecting masonry walls with plaster. Three gable-roofed dormers rise from the wood shingle roof. The parapeted gables on the north and south ends add a distinctive touch, and wooden shutters decorate the windows.

The Benet Store at 62 St. George Street represents the building as it was first constructed by Pedro Benet circa 1840, in the late Territorial Period (1821-1845). Pedro, who operated a store from the first floor of his residence across St. George Street, moved his stock into the newly constructed building and continued his commercial activities from that location. The store was sold around 1887. The Benet family, descendants of Minorcans who arrived in St. Augustine around the time of the New Smyrna colonists' arrival in 1777, is nationally known through the reputation of General Stephen Vincent Benet and his grandchildren, the literary trio of Stephen Vincent Benet, William Rose Benet, and Laura Benet. The store appears on the 1894 Birds Eye View of St. Augustine; however, the Sanborn maps show a two-story brick building on the site in 1899. This structure, completed in August 1967, was used as a grocery store and for the commercial interests until it was demolished for the building of the present reconstruction in 1967. Originally used to display goods reminiscent of the earlier era, the building was later operated as a gift shop for tourists.

**63 St. George Street Esteban Benet House (SJ1897)/UF3917/Adams  
(65)**

The two and one-half story Spanish colonial Style building, known as the Esteban Benet House at 63 St. George Street, was reconstructed in 1963 by the Historic St. Augustine Preservation Board. The house is set on the street line and consists of a two-story loggia on the southeast corner. The placement of the loggia was atypical construction practice designed for climate control. The walls have a stucco finish, also a practice followed in the colonial days for protection of the masonry walls. A wooden balcony with chamfered posts extends above the street on the west side. Exterior wooden blinds accent the windows. This house, on a corner lot, is in the heart of the restored area.

CONTINUATION SHEET**

Section number 7 Page 15 **St. Augustine Historic District (Additional Information)  
St. Augustine, St. Johns Co., FL  
Description**

---

This historic reconstruction at 63 St. George Street represents a house of the Benet family who occupied this from 1804 until about 1904. Esteban Benet bought a wooden house on the lot in 1804, shortly before his death. His fourteen year old son, Pedro, assumed responsibility for the family at that time. Apparently, the coquina house was built soon after purchase of the lot, as it is listed in Pedro's possession after the senior Benet's death. Esteban was a native Minorcan who arrived in St. Augustine in the late 1700s. His son, Pedro, later became an influential force in the Minorcan community in St. Augustine and was referred to as the "King" or the "Boss." He established a store, first on the first floor of the house and later in a coquina building across the street. Pedro's son, Joseph Ravina, took over operation after his father's death in 1870. Joseph's sister, Isabel, came into possession of the house and became the family matriarch until her death in 1915. Other Benet family members who have distinguished themselves, include General Stephen Vincent Benet, also a son of Pedro; and his grandchildren: Stephen Vincent, William Rose, and Laura Benet, all literary giants. According to Sanborn maps, the Benet House was replaced by a two-story brick and stone building sometime between 1899 and 1904. The building housed a barber shop and variety shop. An early proprietor was prominent Jewish businessman, William A. Pinkoson; later the Red Star Five and Ten Cent Store was operated by C. F. Bailey. The merchant center was demolished for the building of the existing reconstruction.

**70 St. George Street                      Ortega House (SJ1898)/Not UF**

This one and one-half story Spanish Colonial Style building at 70 St. George Street, known as the Ortega House, was reconstructed by the St. Augustine Restoration Foundation, Inc., in 1968. Typical of colonial structures, the house is set on the street line with a gate opening into the yard. The masonry walls are stuccoed representing a practice of plastering masonry walls for protection used by the early colonists. The gable roof consists of wooden shingles and two dormers project from the western (rear) slope. The windows are accented by wooden *rejas* and cast stucco corbelled sills.

This house at 70 St. George Street is listed on a 1764 map as belonging to the heirs of Nicolas de Ortega, the royal armourer. During the British Period (1763-1784), it was owned by John Proctor and James Scotland. A Minorcan, Sebastian Ortega (no relation to Nicolas), purchased the house in 1791, but due to legal claims by Nicolas' heirs he was unable to retain ownership. By 1884 the Sanborn map shows the eastern end of the site occupied by a three-story stone and frame building used as a private residence boarding house; on the west end was a two-story carpentry shop and residence. Both buildings housed a variety of shops until one was demolished in 1924 with the second existing until 1967. The historic reconstruction was used as a private residence in 1968.

**72 St. George Street                      Bartolome Villalonga House (SJ1899)/Not UF**

The two-story Spanish Colonial Style building at 72 St. George Street, known as the Bartolome Villalonga House, was reconstructed in 1972 by the St. Augustine Restoration Foundation Inc. Typical of the colonial structures, the house is set on the street line with a gate opening into the yard. A wooden balcony with square

wood posts projects above the street. The masonry walls are covered with stucco, a practice representative of colonial usage of plaster to protect the masonry walls. The yard is partially enclosed by a masonry wall.

This historic reconstruction at 72 St. George Street represents a house built by Bartolome Villalonga between 1815 and 1820, during the Second Spanish Period (1784-1821). Villalonga was of Minorcan and Greek parentage, a descendent of New Smyrna colonists who migrated to St. Augustine in 1777. A stereo view circa 1880 shows the building with a third story of wood with a two-story balcony. By 1884, the Sanborn maps show the site was occupied by three buildings; a one-story frame "Photo" shop, one-story frame shed, and a one and one-half story "tailor" shop. Various shops were housed in the buildings over the years. In 1924, a large one-story brick and stone building occupied the site before demolition for the present historic reconstruction. The building, now used for commercial enterprises blends with the original colonial and other reconstructed colonial buildings of the restored area.

**74 St. George Street** **Jorge Acosta House (SJ1900)/Not UF**

This two-story Spanish Colonial Style building, known as the Jorge Acosta House at 74 St. George Street, was reconstructed in 1976 by the St. Augustine Restoration Foundation, Inc. Typical of colonial structures, the house is set on the street line with an entrance through a gate into the yard. Wooden blinds and paneled shutters accent the many windows of the large house. The yard is partially enclosed with a masonry fence. It is adjacent to a grass-covered lot and forms the southern boundary of restored St. George Street.

This historic reconstruction at 74 St. George Street represents a house built between 1803 and 1812, during the Second Spanish Period (1784-1821) by Jorge Acosta. Acosta, born in Corsica, and his wife Margarita Villalonga, a Minorcan, were children of New Smyrna colonists who migrated to St. Augustine in 1777. The Villalonga and Acosta families, related through more than one marriage, built several homes in this vicinity, including one on the adjacent lot, represented by the historic reconstruction of the Villalonga House (SJ1899). This large coquina building was not demolished until about 1917-1924. In its century-long life, it served as a private residence until the 1880s, and was used by the Women's Exchange in 1899, and later by a variety of stores. The 1924 Sanborn map shows a one-story brick and stone building housing numerous businesses. This was demolished for the building of this reconstruction of the Acosta House and Villalonga House. The Acosta House was dedicated in 1976.

**91 St. George Street** **Miguel Santoyo House (SJ1901)/Not UF**

This one-story Spanish Colonial Style building at 91 St. George Street, known as the Miguel Santoyo House, was reconstructed in 1966 by the St. Augustine Restoration Foundation, Inc. The house consists of a flat roof with drain spouts and masonry walls. The 1764 Puente map indicates the original house was constructed of a shell-concrete mixture known as tabby. The stucco exterior of the present structure represents the plaster finish used by the colonists to protect masonry walls. Contrary to colonial architecture patterns, the house is set back from the street line and does not contain a loggia or porch.

Section number 7 Page 17

St. Augustine Historic District (Additional Information)  
St. Augustine, St. Johns Co., FL  
Description

This historic reconstruction at 91 St. George Street appears on the 1764 Puente map as the house of Miguel Santoyo, a native of the settlement and a soldier at the Castillo. The house was apparently destroyed during the British Period (1763-1784) as it does not appear on later maps. The 1917 Sanborn map indicates the site was previously occupied by a two-story brick building serving as a merchant center (restaurant, furniture, and other stores) until demolished for the building of the reconstruction. The building currently serves as an artist's shop.

**97 St. George Street Marin-Hassett House (SJ1902)/Not UF**

The two-story Spanish Colonial Style building known as the Marin-Hassett House, at 97 St. George Street, was reconstructed in 1969 by the St. Augustine Restoration Foundation, Inc. The front or western portion represents a mid-18<sup>th</sup> century Spanish structure. It is set on the street line with a gate opening into the yard. The coquina walls are stuccoed to protect the masonry from moisture and *rejas* over the street side windows add a Spanish flavor. A corbelled wooden balcony with chamfered posts and turned spindles projects from the front. A two-story open porch with square wood posts and porch railings on the second floor looks out toward the courtyard on the south. An arched loggia accented with molded capitals also faces the southern patio. The placement is typical of a construction practice known as the St. Augustine Plan, which takes full advantage of prevalent breezes in the summer and the warmth of winter sunshine on colder days. The entrance to the house is through the loggia. A wooden addition to the house represents the British Period (1763-1784). The narrow gabled-roof, frame wing symbolizes the mixture of architectural styles found during the English occupation and Second Spanish Period (1784-1821). The building and large garden-patio are located at the end of the restored St. George Street.

The historic reconstruction at 97 St. George Street is named for Antonia Marin and Irish priest, Thomas Hassett. Early maps drawn up as England gained control of Spanish Florida show Antonia as the owner of a stone house. In 1766, it was purchased by James Box, once the colonial Attorney General. The property was conveyed to Stephen Haven, then to Francisco Entralgo, who sold to Father Hassett in 1787. The priest was a friend and supporter of the Minorcan community and concerned with the education of the poor. He is credited with establishing the first free school in what is now the United States. The L-shaped masonry house addition bears Hassett's name. Early Sanborn maps show the site occupied by a one-story brick merchant center from 1917 until around 1969, when it was demolished for the building of the existing reconstruction. Minorcan descendents of the Andreu and Segui families operated a restaurant and billiard parlor in the brick building.

**ADDITIONAL RESTORATIONS**

In researching the reconstructions, information was found for additional restored buildings that were omitted from the original National Register nomination:

**54 ½ St. George Street Paredes Dodge Back House (outbuilding) SJ5572/UF3904/Adams**

This small outbuilding is associated with the Paredes Dodge House built in 1808, which is a restored building that is already listed as a contributing resource in the St. Augustine Historic District. The outbuilding is a wood framed, none-story, gable-end building with a wood floor. Like the main house with which it is associated, it dates from ca. 1808.

**67 St. George Street McHenry House (SJ not recorded)/Not UF**

Using the Property Appraiser's records and Google Maps, it appears that the building recorded as being at 67 St. George Street may be the current building at 69 St. George Street, which is functioning as the Mi Casa Café. The property appraiser's records show this to be a building constructed in 1800. If correct, this would not be a reconstruction, but one that should be added to the list of contributing buildings as a restoration.

**HISTORIC CONTEXT**

**Reconstructions as Part of the St. Augustine Historic Preservation Plan**

The St. Augustine Historic District was listed in the National Register of Historic Places in 1970, and additional information was provided in 1986. The additional information provided a detailed resource list, including 295 contributing resources. Thirty-one (31) reconstructions, all of which are classified as noncontributing resources, were also included. The reconstructions date from 1955, 1961-1969, and 1971-1979.

These reconstructions were built as part of a master plan to restore and preserve St. Augustine's historic resources. The genesis of the plan dates back to 1936, when the Carnegie Institution of Washington, D.C., and city leaders of St. Augustine devised a plan to restore the colonial city. St. Augustine's mayor, Walter B. Fraser, favored a Williamsburg approach to recreate the colonial city, while John C. Merriam, the president of the Carnegie Institution, proposed a selective restoration program based on substantial research. A conference of noted historians was held in Washington on October 26, 1936, where discussions included what properties should be restored, what should be reconstructed, and how archaeological research needed to be incorporated. The Arrivas House at 46 [sometimes recorded as 44] St. George Street was noted as a "place of interest" in the July 4, 1937 edition of the local newspaper, the *St. Augustine Record*. This was a special edition of the newspaper that was devoted to reporting on the restoration project. Verne Chatelain, who had just resigned from the National Park Service, headed up the program of work in St. Augustine. Under his direction, no wholesale reconstruction was to be undertaken. According to the report of Subcommittee No. 2, "there would be no attempt to 'freeze history' to any target date because the restoration program must emphasize the idea of a living city that had developed over many years" (Hosmer, Vol. 1, 312-322).

Funding for the work in St. Augustine, however, was hard to come by, and only limited progress toward any sort of preservation or "restoration" work was made in the 1930s. The 1937 completion of a new U.S. Post Office Building to replace a mostly 19<sup>th</sup> century old post office building located on the former site of the colonial governor's palace and later American territorial Government House, marked the beginning of steps in that direction. This building, completed under the direction of the Supervising Architect's Office within the U.S. Department of the Treasury, and funded through the Public Works Administration and Works Progress Administration, was very consciously designed to resemble the Governor's House as depicted in a 1764 image of the edifice. The new building was not a replica or a true restoration as the word understood or defined today, but did incorporate as much historic fabric remaining from the early 19<sup>th</sup> century as possible, and sought to emulate the colonial character of the 1764 building. It was considered a "restoration" at the time and conformed to the standards set by Colonial Williamsburg. Government House is a contributing resource in the St. Augustine Historic District as listed in 1986.

**Significance and Bibliography**

---

In 1940, Carnegie Institution's leadership changed and the Institution's support for the St. Augustine project was severely cut. Meanwhile, funding from the State of Florida was not available until after World War II. As a result, a regeneration of the plan for St. Augustine did not take place until the 1950s. In 1959, a special advisory board published a formal plan for the Florida Board of Parks and Historic Memorials, entitled *The St. Augustine Restoration Plan*, and work began.

On September 10, 1969, the *St. Augustine Record* again issued a special issue of the newspaper, entitled, "A Progress Report On The Restoration of St. Augustine." It includes retrospective descriptions of the efforts that were envisioned in the 1930s but not tackled until 1959. A review of "A Decade of Progress" showed that many of the goals formulated in the 1930s had been addressed through a four-pronged strategy of research, land acquisition, construction, and interpretation and utilization. A part of the research included visits to Williamsburg, Old Sturbridge Village, and other restoration projects to evaluate their methods and operations. Other aspects of research conducted in cooperation with scholars included the St. Augustine Historical Society, the Catholic Church, and the National Park Service. Archaeology played a key role in the research to further ensure accurate restorations and reconstructions of buildings.

Land acquisition was also a major part of the effort, with the purchase of 34 parcels between 1959 and 1969. Construction crews were specially trained "to ensure restoration and authenticity due to different types of construction as compared to modern methods." Major examples of their work included authentic shingle splitting and hewing wood by hand.

The restoration and reconstruction work was carried out not only by the Commission but also by private groups and individuals. A non-profit sister organization to the Commission, St. Augustine Restoration, Inc., was established in March 1962 to raise funds.

In 1961, the 1746 Arrivas House, located at 46 St. George Street, was the first residence to be restored (as suggested in 1937). The two-and-a half-story house was used as the Commission's headquarters and included craft shops. It was dedicated by Vice President Lyndon B. Johnson on March 11, 1963 (Gannon, [6 & 7]), the building was recorded by the Historic American Building Survey (HABS) in 1965, and is listed as a contributing resource in the 1986 district nomination.

A major difference between St. Augustine's preservation efforts and the approaches taken at Williamsburg and Old Sturbridge Village, was the City's commitment to keep St. Augustine as a "living community," not one frozen in a representation of the colonial period. As noted by Director Bradley G. Brewer,

Focusing on the future of a project with the magnitude of the restoration program is an [sic] never ending process. . . . We are involved in a restoration project that will ultimately cover a large area of a living city. We must ever be mindful that our citizens must be able to make their living within

much of the future restoration area, therefore we must be cognizant of their needs and yet not lose the aim of recreating the architectural design and the atmosphere of our Hispanic Heritage for the visitors as authentically as is practical ("Focus on the Future: Director Bradley G. Brewer Comments On The Future Course," *St. Augustine Record*, September 10, 1969, page three).

The "living city" goal was reflected by the reconstruction of the Herrera House that was to serve as the office for Southern Bell Telephone Company. In 1966, the Sanchez Ortigosa House was made into a "carpinteria" [carpenter's shop], and was later used to demonstrate textile making and weaving ("Restoration Corporation Has Key Role In Progress," *St. Augustine Record*, September 10, 1969, page five).

Although the most concentrated efforts came from the St. Augustine Restoration and Preservation Commission and its sister organization, St. Augustine Restoration, Inc., the city and St. Johns County governments, and the National Park Service, private agencies, businesses, and individuals also participated. Examples of their projects included the National Park Service's reconstruction of the Cubo Line at the Castillo de San Marcos and restoration of the Old City Gates. Businesses and individuals who participated included the Independent Life Insurance Company, which refurbished the Sanchez House on St. George Street and maintained it as a museum and site of their St. Augustine business offices. The Exchange Bank restored the Perez-Sanchez House to serve as its accounting offices; the Thompson-Bailey Agency reconstructed the McHenry House as a private residence; and W. K. Moeller restored the Ortega-MacMillan House [reported in the newspaper as the Aguilar Sequi House] at 224 St. George Street as a private residence in 1965. This building was recorded by HABS in 1965. ("Community Becomes Involved," *St. Augustine Record*, September 10, 1969, page fourteen and *St. Augustine Record*, "A Living Restoration Program," page twenty-one).

The preservation goal was to depict life in St. Augustine as it was between 1565 and 1821. By 1969, the efforts to achieve that goal led to the restoration or reconstruction of 11 buildings representing the First Spanish Period, 4 representing the British Period, and 12 representing the Second Spanish Period. Two American Period buildings were acquired, as well as some representing the general colonial American period. Eight of the buildings were used as museums, six as craft shops, seven as private businesses, and two as private residences.

Despite the delay in realizing the objectives of St. Augustine preservationists, according to Hosmer, even the 1930s preservation plan for St. Augustine had a positive influence on preservation thought in other parts of the country. He quotes Aubrey Neasham, the regional supervisor of the historic sites for the National Park Service in the Southwest, who in June 1940 commented that St. Augustine "has taken a definite lead in her program of preservation." Hosmer then further stated, "It is possible to argue that this Florida resort community did take a leading position in the preservation movement for a while simply by providing a model. It was a research program, an ambitious one . . ." (Hosmer, 322).

True to the plan, with the reconstruction of the de Hita Gonzalez House at 39 St. George Street in 1979, thirty-one (31) reconstructions were completed, as recorded in the National Register documentation submitted in 1986. Detailed information about 27 of the reconstructions was recorded in the Florida Master Site File (FMSF), each including a full description of the original building and the documentation for the historic building that each one recreated.

Present & Original Physical Appearance (use continuation sheet if necessary)

The Dummett House is a three-story masonry building constructed of native coquina block on the first and second stories. These walls are plastered on the interior and exterior with the exterior painted white with brown trim. The overall shape of the structure is a parallelogram, the corners not being squared, measuring 38' x 58'. The third story is composed of a mansard roof of wood frame construction with asbestos shingles. Eight shed roof dormers interrupt the roof line at regular intervals along three elevations as does a single interior stuccoed chimney. At the base of the roof is a brown-colored box cornice with paired decorative brackets.

The courtyard of the north elevation comprises the main facade. This facade is dominated by a two-story porch running approximately two-thirds of the length of the wall. Turned wooden posts support the gallery at both levels with a pent roof

862==

CONTINUATION SHEET

Present & Original Physical Appearance (cont.)

topping the second story porch. A spindle band connects the tops of the posts while a plain balustrade completes the second story porch. The fenestration is regular and composed of two-over-two double-hung windows set flush into the walls with plain sills. Most of the windows in the building are of this type. Two dormers project from the roof on this elevation. The main entry is a single wooden panel door which opens into a large hall with a stairway.

Facing St. George Street is the west facade which has a regular fenestration with two dormers in the roof. A street balcony is the main feature of this elevation. The posts, roof, and trim are the same as with the north porch but the balcony has additional support from heavy rods with turnbuckles. A corner brace of wood gives support to the point where the balcony continues around and along the south elevation. The windows behind the balcony differ from the others in that they are nine-over-nine double-hung and much longer and wider than the rest of the windows. Access to the balcony is gained through a large single wooden door on the south side.

The balcony is the only outstanding feature on the south facade which otherwise is plain with a regular fenestration, a single panel entrance on the first floor, and four dormers. The east elevation has a small ell which rises three stories forming a flush end in the roof line.

The first floor contains, in addition to the entrance hall, five rooms including a kitchen plus one and one-half baths. Both the second and third floors are composed of seven rooms and four baths with a kitchen on the third level.

There is a small (20' x 29'), two-story building to the northeast of the main house, placed parallel to and alongside the courtyard. The date of construction of this building is unknown, but it is said to have been on the property when purchased by Colonel Dummett in 1838.

The house was constructed sometime during, or immediately after, the year 1791. It was originally a two-story structure, the third story most likely being added by John L. Wilson, a former owner, in 1888. The extent of alterations prior to this date is unknown.

The Dummett House is a good example of the St. Augustine Plan characterized by the street balcony and main entry through a porch or loggia opening onto a courtyard. With the addition of the mansard roof the house provides a good lesson in how many of the houses in St. Augustine underwent changes during the late nineteenth century in an attempt to "modernize" them in keeping with popular fashion.

Statement of Significance (use continuation sheet if necessary)

The Dummett House is characteristic of the St. Augustine Plan dwelling dating from the late eighteenth century or early nineteenth century. Its present appearance provides a good example of how many of the old houses in St. Augustine were "modernized" to keep up with fashion.

The house was probably built for Gaspar Garcia after 1791 when he received a Spanish King's Grant of land. Garcia was a First Class Sergeant in the Third Battalion of the Infantry of Cuba. The most important person who owned the house was Col. Thomas Henry Dummett, a wealthy sugar planter from Barbados. Forced from the islands by a slave uprising, he came to Florida and established a 3500 acre sugar plantation near New Smyrna. During the Second Seminole War his plantation was destroyed and he was forced to flee. The house was also owned by Lt. Col. William Joseph Hardee who was appointed Commandant of Cadets at West Point in 1856. The house has subsequently served as a boarding house and later as an inn under various names.

Ms. Carol D. Shull, Chief of Registration  
National Register of Historic Places  
Department of the Interior, NPS  
P. O. Box 37127  
Washington, D.C. 20013-7127

Dear Ms. Shull:

Enclosed is the revised nomination form for the St. Augustine Historic District, which Bill Thurston of my staff has discussed with Amy Schlagel by telephone.

Please note that we have made no change in the boundaries of the district as it was originally listed in 1970. The revised nomination form reflects a recent resurvey of the district to identify all properties that reflect historically significant development within the area through the 1930's, and includes a complete listing of contributing properties. The revised nomination form has been reviewed and approved by our National Register Review Board.

For the reasons discussed with Ms. Schlegal by telephone, we will appreciate any steps you can take to expedite your review of the revised nomination. Please do not hesitate to call me if you need any clarification or additional information.

Sincerely,

George W. Percy  
State Historic Preservation Officer

Subject: Re: St. Augustine Town Plan Boundary

Patty --

Thank you for the documentation you sent me on St. Augustine Town Plan Historic District. It was most helpful!!!

As near as we can figure the following events happened in the following sequence, although we may have some of the sequence wrong:

1. The Secretary designated the St. Augustine Town Plan Historic District as an NHL on April 15, 1970, along with a number of other Spanish colonial properties (including three individual buildings in St. Augustine) across the country, either as an expansion of the Spanish colonial theme study of 1959, or some type of study of colonial architecture. I note that the Single Brothers House, a Moravian pre-Revolutionary property in N. Carolina was designated the same date. We do not, however, have a copy of this theme study and if you run across the document upon which these diverse properties were designated I know we would appreciate receiving a copy.
2. The St. Augustine Town Plan Historic District NHL was entered into the National Register with the Entry Number of 70000847. But like you said below the "NHL file (in both your office and mine) has no real nomination in it; not even one of those old Historic Sites Survey forms."
3. However, on April 1, 1970, the SHPO of Florida sent the National Register nomination for St. Augustine Historic District, you mention below, to the Keeper. The National Register got it on April 8th, and it was listed by Bill Murtagh on July 3, 1970. This document has the Entry Number of 707090001. It seems this National Register nomination has been used as the NHL document because it was so good for 1970.
4. The reason I think this happened is if you check the National Register of Historic Place 1966 to 1994 book, the only St. Augustine Historic District listing is for the NHL - St. Augustine Town Plan Historic District with the entry number of the NHL designated on April 15, 1970 - 70000847. The St. Augustine Historic District listed in the National Register on July 3, 1970, with the entry number of 707090001, is not listed in the book. I think over time the two simply melded into one document.
5. I think this joining happened, to a large extent, when the State of Florida submitted additional documentation to their 1970 National Register nomination, in 1985, to the National Register. This document expanded the architectural and historical period of significance from 1821 to 1935 for the National Register nomination.
6. The NHL for April 15, 1970, had no nomination form and hence no boundary. The 1970 National Register nomination had a USGS map (we have a copy in our files) showing the boundary of the district as being bounded on the north by the Castillo (NPS Property) running west to Cordova Street, then south to St. Francis Street, then east to the Matanzas River and then north along the river to the Castillo. This pretty much corresponds to the Spanish colonial town plan established after the 1702 English attack on the city.
7. However, on October 31, 1984, a revised boundary was put forth saying the district is "Bounded on the north by Castillo de San Marcos, on the south by St. Francis Barracks, on the west by Codova street **including the Alcazar Hotel**; and on the east by the Matanzas River." Note the Alcazar Hotel is west of Codova Street and outside the boundary map for the 1970 National Register nomination. Where this new boundary came from is not noted in our files, but there was a really push in the mid-1980s to get

NHL designation 4/15/70  
Add Doc. 7/01/70  
Add Doc. 6/4/86

boundaries for NHLs.

8. The 1985 National Register nomination you sent us has a boundary description which includes the Alcazar Hotel and now **the Ponce de Leon Hotel (or Flagler College)**. We just received a letter from Mr. Bill Adams, who wrote the 1985 expanded documentation for the St. Augustine National Register nomination, and he states he did not write the 1985 expanded documentation study to include these two buildings, because they are west of Cordova Street, and outside the old colonial town.

9. I should like to suggest that this might be resolved by published the NHL boundary and the National Register boundary separately, in accordance with their entry numbers. Please note that the current entry for the St. Augustine NHL boundaries are "Roughly bounded by Grove Ave, the Matanzas River, and South and Washington Streets," which does correspond to any of the above boundaries.

We are hoping to get a small Challenge Cost-Share Grant to update and revise and digitize the NHL nominations for the Llambias House, the Oldest House and the Cathedral of St. Augustine. We also will look at the status of extant historic housing in the district and from there we might be able to recommend something more effective for this significant historic area.

Any ideas, comments, or additions to the above you have will be gratefully accepted.

Take care and thank you,

Mark Barnes

Patty Henry

Subject: Re: St. Augustine Town Plan Boundary 

Hi Mark:

I have just put in the mail to you some material from the National Register St. Augustine H.D file. There was too much to fax so we just xeroxed it and put it in the mail. It appears that the 1986 action was not a boundary expansion but rather an improved documentation. Our NHL file for the property has no real nomination in it; not even one of those old Historic Sites Survey forms. But there is a 1970 National Register nomination for it which we also copied and have sent to you. Then there is the 1986 material along with a map and some sort of inventory.

Hopefully this will make some sense to you when you see it. If you have questions or need to discuss it don't hesitate to call or e-mail.

Thanks,

Patty

Mark Barnes

Subject: St. Augustine Town Plan Boundary

Dear Patty--

As you may remember our office has been trying to get a better handle on our NHL districts. The St. Augustine Town Plan (designated in 1971) really needs to be revised and our office has been gathering information and personnel to achieve that goal in the future.

We received a telephone call from a Ms. Sickles in St. Augustine that Barbara Mattock (Florida SHPO office) said the National Register approved a boundary expansion in 1985 to include the Alcazar and Ponce de Leon Hotel. But I could not find any indication of this in the NHL file here. Could you please send me a copy of the paperwork on this new boundary?  
My fax is (404) 562-3244.

Cecil and I are under the impression that only those resources dating prior to 1821 are nationally significant, such a boundary expansion could be a great asset to us in developing a revised nomination, as this could help us to include very significant post-1821 properties. If you need to call me – (404) 562-3173.

Thanks in advance for your help.

Mark Barnes

Carl Halbirt  
City Archaeologist  
P.O. Box 210  
St. Augustine, FL 32085-0210

Dear Dr. Halbirt:

Thank you so much for your participation in the National Park Service's Cultural Resources Diversity Program. We appreciate your assistance and willingness to oversee our intern, Pauline Kulsted, as she works to clarify the boundary issues relating to the St. Augustine National Historic Landmark (NHL) District. Your discussions with our staff and the Southeast Regional Office about the Cultural Resources Diversity Program (CDRP) internship, the necessary skills an intern working on this project would need, and, more generally, your assistance with the updated documentation and boundary have been invaluable.

Following our discussions with you, Dr. Kathleen Deagan of the Florida Museum of Natural History, University of Florida, Dr. Erika Martin Seibert of the Washington Office NHL Program, National Park Service (NPS), and the Southeast Regional Office of the NPS, this NHL/NPS project seeks to update the existing NHL documentation to our current standards, add Archeology as an area of significance, and comprehensively and clearly define the NHL district boundary. Demonstrating that the archeology of St. Augustine is nationally significant is a crucial step in defining the boundary of the NHL. The NHL district boundary will reflect the extent of the physical resources that date to the period of significance.

Our discussions with you helped us to clarify that the appropriate period of significance for this NHL will be approximately 1572-1821. The nomination will demonstrate the national significance of the site's archeological research agenda with regard to St. Augustine as an Old World example of a town plan and its development in the New World. The nomination will also ultimately include a discussion, through an examination of the archeological record, of the extraordinary resilience and adaptability of this town and its people, the movements of people in and out of the town, and the evolution of the town as an urban center.

Under your guidance, Pauline Kulstad, the NPS CRDP summer intern, will work with you and Dr. Deagan to develop the boundaries of the NHL and add the archeology as an area of significance, rewriting our current documentation.

The National Park Service appreciates your assistance with this project and your work to help ensure the preservation of our shared heritage.

Sincerely,

**J. Paul Loether**

**MAY - 3 2013**

Ms. Antoinette J. Lee, Ph.D.  
P.O. Box 3407  
Arlington, VA 22203-3407

Dear Toni:

Thank you for your inquiry about the potential of Government House in St. Augustine, Florida, to be considered for National Historic Landmark (NHL) status. The Office of the Supervising Architect of the Treasury hired Jacksonville architect Mellen C. Greeley to design the building, which was completed in 1937. Buildings on this site have served government functions since the colonial period and Greeley incorporated materials from surviving coquina walls into his design for a modern post office facility. We have considered the property's significance under Criterion 1 and Criterion 4 as an early work of restoration as conducted by the Federal government and within the development of the historic preservation movement in the United States. After careful examination and evaluation, we have determined that the property does not meet the requirements for NHL consideration and we cannot encourage the preparation of a nomination.

Although it is difficult to view Government House as an example of a "restoration," this term was applied to the project at the time of conception and realization, and the evolution of "bricks-and-mortar" preservation is an important theme in the history of historic preservation. The building does not appear to be a restoration, but rather is a modern design that selectively includes some (the gabled end wall and balcony), but not all (the tall courtyard walls, tower, and classical portal) of the features visible in a 1764 view capturing the east elevation of the building. The design may have used existing coquina walls, or reused wall materials on the first floor of what became one wing of the new building. The footprint of the building existing on the site at the outset of design and construction was fully absorbed into the new one. This contrasts with the wholesale reconstruction of the Governor's Palace and Capitol in Williamsburg between 1928 and 1934. These buildings are also twentieth-century interpretations of the colonial past; however, the purpose of the project was distinct, the level of investigation highly intensive, and the outcomes very different. Unlike Government House, the major buildings at Williamsburg were recreated as museum pieces. Towards this end, the architects at Williamsburg conducted in-depth research, and on-site archeology of below-ground resources, and architectural fieldwork in an attempt to reconstruct, as accurately as possible for the time, the Governor's Palace and Capitol as depicted on the Bodleian Plate (ca. 1740). With the new post office in St. Augustine, knowledge of Spanish colonial architecture—including an eighteenth-century view of a predecessor building

The documentation acknowledges that the term “restoration” was used differently in the 1930s than today, but does not elaborate on this key topic. Overall, the project seems to be more related to contemporary design processes involved in devising new buildings that reference local architectural precedents than a restoration or reconstruction of a specific building. Furthermore, the assertion that Government House can be considered a restoration does not include an in-depth consideration of how people in the 1930s defined and utilized this term. Such an approach would require a difficultly researched and deeply nuanced analysis of the concept of “seeing” relative to historic buildings.

If contemporaries truly viewed Government House as a restoration, or even an inventive reconstruction, in the manner that terms are defined today, what kind of mental gymnastics were in play? What were the boundaries for something understood to be a restoration versus a new design that might broadly be categorized as (Spanish) Colonial Revival? How did they reconcile the dramatic differences between the building of 1935-37; its immediate predecessor—an amalgam of different periods of construction and alteration; and the historic watercolor (1764) that “was adopted the key-note of the restoration”? Did they see, for example, differences between the work done in recreating Williamsburg’s Governor’s Palace and Capitol and the project that created Government House?

As it stands, it is hard to know from the submitted documentation what parts of the building, exactly, survived into the early 1930s, when these parts were originally built or significantly altered, and what fabric was ultimately incorporated into the new post office building. There is no clear account of the building’s construction and evolution over time. The documentation seems to suggest that perhaps more than restoration Government House was the first example of a federally-funded adaptive reuse project. The degree to which the, at best, use of three walls in an otherwise modern building could be considered adaptive reuse is questionable, as is the importance of a one-off project, an anomaly within the Office of the Supervising Architect of the Treasury.

The Supervising Architect’s Office was, in effect, one of the most important architecture “firms” operating in the country during the second half of the nineteenth century and the first half of the twentieth century. As you have demonstrated in your own publication, the office was incontestably engaged in nationally-significant work whether considering the office’s historical role or the architectural significance of some of its designs. The Supervising Architect’s Office was responsible for the design and construction of new buildings for federal functions in historic towns and urban neighborhoods across the country and Government House fits well within that context. The office’s reuse of wall remnants in the construction of a new post office in St. Augustine in 1935-37 does not reposition it as a “type specimen valuable for the study of early restoration architecture by the Federal government in the United States.”

While clearly situated within the popular and professional dialogue in the 1930s about historic buildings and sites, decisions made about the design of Government House seem to be better categorized as something more of a fanciful contextualization. The formal and stylistic choices made by Mellen Greeley in conjunction with the Supervising Architect’s Office do not seem dissimilar to the deliberation that would have occurred each time the office planned a post office or some other government building in a historic town and or neighborhood.

The design process for Government House was also not unique to the Supervising Architect's Office. At the same time that work was proceeding with Government House, the National Park Service (NPS) was undertaking a project with a similar goal. Typical of NPS practice at the time, the design of the headquarters building at Fort Matanzas (1935-36) purposefully mimicked local architecture with its use of coquina and wood-framing. Considering the emphasis that the nomination places on the role of the Federal government in the restoration project, it would have been helpful to place the property within context of the development of the Federal government's role in preservation—particularly the Antiquities Act (1906) and the effort to preserve Native American ruins (Casa Grande and Mesa Verde); formation of the NPS and early historical parks (Colonial); the creation of HABS (1933); and passage of the Historic Sites Act of 1935.

St. Augustine's larger role in the historic preservation movement is an important one and remains much understudied. The nomination understandably focuses much attention on Williamsburg, but does not provide a clear structure for the movement's history, particularly events related to the Federal government's role in preservation as well as the efforts of other "living cities," such as Charleston, New Orleans, Savannah, San Antonio, and Alexandria. Moreover, the argument in the submitted documentation focuses more on the importance of St. Augustine to historic preservation as a district. We feel that a district nomination—or an expansion to the present one currently being revised—could more fully and satisfyingly demonstrate St. Augustine's national significance than a single property built in 1935-37. A district nomination would take into account the complex narrative of historic preservation in all its facets, including: archeology, public history, architecture—reconstructed and restored as well as new designs like the post office, and the ever-important element of commerce and historical tourism in a city that by the 1930s had long been established as a resort community.

Thank you for your patience while we reviewed the relative merits of the property as well as the information contained in the draft you submitted. Please keep in mind that the NHL Program does not recommend the preparation of documentation prior to us making an official response about the potential of a property to be considered for NHL status. The steps of the process exist to avoid misdirecting resources and energies by both the property owner and the preparer, which we are particularly sensitive to at a time when the national economy remains fragile. If you would like to discuss this review further, please contact James Jacobs by phone (202-354-2184) or email (james\_jacobs@nps.gov). We look forward to working with you on other projects in the future.

Sincerely,

**Alexandra M. Lord**

## FLORIDA DEPARTMENT *of* STATE

RICK SCOTT  
Governor

RECEIVED 2280

MAR -7 2014

NAT. REGISTER OF HISTORIC PLACES  
NATIONAL PARK SERVICE

KEN DETZNER  
Secretary of State

February 28, 2014

Ms. Carol Shull, Keeper  
National Register of Historic Places  
Department of Interior  
1201 Eye Street, N.W., 8<sup>th</sup> Floor  
Washington, D.C. 20005

Dear Ms. Shull:

70000847

Enclosed is the submission of the nomination and additional materials (additional information, continuation sheets, site plan, GIS data, digital images and disk) for

### **St. Augustine Historic District (Additional Information), St. Johns County, Florida**

The enclosed additional information is to provide documentation to reclassify the authentic reconstructions located in the St. Augustine Historic District as contributing resources.

Please do not hesitate to contact Bob Jones at (850) 245-6333 if you have any questions or require any additional information.

Sincerely,

Barbara E. Mattick, Ph.D.  
Deputy State Historic Preservation Officer  
for Survey & Registration
