National Register of Historic Places
Registration Form

1050

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Funkstown Historic District
other names WA-I-529

2. Location

street & number West Side Ave. to Stouffer Ave./Poplar to Green St. not for publication
city or town Funkstown vicinity
state Maryland code MD county Washington code 043 zip code 21734

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1966, as amended, I hereby certify that this nomination
request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic
Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not
meet the National Register criteria. I recommend that this property be considered significant nationally statewide locally. (
See continuation sheet for additional comments).

[Signature] 8-4-00
Signature of certifying official/Title Date

State or Federal agency and bureau

In my opinion, the property meets does not meet the National Register criteria. (See continuation sheet for additional comments).

walls stone, brick, wood, synthetics concrete
roof metal
other wood

Narrative Description

(Describe the historic and current condition of the property on one or more continuation sheets)

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A** Property is associated with events that have made a significant contribution to the broad pattern of our history.
- B** Property associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property as yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply)

Property is:

- A** owned by a religious institution or used for religious purposes.
- B** removed from its original location.
- C** a birthplace or grave.
- D** a cemetery.
- E** a reconstructed building, object, or structure.
- F** a commemorative property.
- G** less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance

Funkstown Historic District

Name of Property

Washington County, Maryland

County and State

Section number 7 Page 1

PHYSICAL DESCRIPTION:

DESCRIPTION SUMMARY:

The Funkstown Historic District is located in a horseshoe bend of the Antietam Creek in Washington County, Maryland. The National Road forms Funkstown's main street (Baltimore Street) and shaped in a significant way the appearance of the town. Funkstown's early and most extensive development was along this route, including the town's oldest known dwelling, the Jacob Funk House, built by the founder in 1769. Other properties are of sided log, stone or brick construction of mixed residential and commercial use, dating from the late 18th century through the mid 20th century. The streets are laid out in a grid pattern terminating at the creek at the north, south and west sides. Industrial sites including a grist mill, powder mill, paper mill and a woolen mill were located along the creek. None of these industries has survived but their sites are known and they may yield archeological data. Architecturally, the district exhibits examples of colonial Germanic, Georgian, Federal, Greek Revival, and Italianate styles, along with later developments such as Queen Anne, Foursquares, Bungalows, and 'Cape Cods.' The district includes 217 contributing buildings, 1 contributing structure, and 3 contributing sites. There are 182 non-contributing buildings, mostly infill development less than 50 years old. The majority of these later buildings are located along the secondary streets.

GENERAL DESCRIPTION:

Funkstown is uniquely situated within a loop of the Antietam Creek about two miles southeast of Hagerstown. The creek serves to contain the town within its original boundaries and plan established in 1767. Following its original plan, the town has six east-west streets, Poplar, Chestnut, Baltimore, Maple, Cemetery and Green; and five north-south streets, West Side Avenue, Antietam and High Streets, Frederick Road-Edgewood Drive-Chewsville Road and Stouffer Avenue.

Most of the 18th and early 19th century development occurred along Baltimore Street which was the old wagon road leading from that city to Hagerstown and beyond. Eventually the road was made into a series of privately run toll roads, the section through Funkstown being the Boonsboro-Hagerstown Turnpike. Typical of towns in central Maryland and south central Pennsylvania, the buildings are aligned directly along the sidewalk with only a few that were designed with setbacks. The buildings along Baltimore Street are also generally the largest, most substantial and stylish. They are of log, stone or brick construction for the most part. Styles

range from German vernacular exemplified by the Jacob Funk House at 35 W. Baltimore Street, (#555) and the log house on Frederick Road north of Maple Street, (#687); to influence from Georgian, Federal, Greek Revival and Italianate styles. The majority of buildings appear to date from the 1820-1850 period coinciding with peak use years of the National Pike.

These large and substantial buildings provide Funkstown with its architectural character. Notable are several large log buildings covered with various early or later replacement sidings. They apparently functioned as inns or hotels. They are five through seven bays in length with two or more entrances. Although one of these buildings has had its siding removed, the exterior walls would have been sided originally. Four such buildings are located on the south side of Baltimore Street, #546 (1 E. Baltimore Street), #547 (1-5 W. Baltimore Street), #550 (15-17 W. Baltimore Street) and #551 (23 W. Baltimore Street). Although porches, dormers, updated sidings and other accretions appear to date from the early 20th century, when there was extensive construction and renovation throughout the town, these buildings are older, having been constructed during the late 18th or early 19th century.

Brick and stone structures are also important to this Baltimore Street scene. The oldest and most significant is the previously mentioned Jacob Funk House. It is among a handful of surviving pre-1780 houses (true Colonial period buildings) in Washington County. Most houses from that time period were small impermanent log buildings, so that Jacob Funk's house would have been exceptional in its own time. Important features consistent with Colonial period masonry construction in the county and larger region, include use of relatively small, neatly coursed stones, presence of a water table and segmentally arched openings. The large and substantial nature of this house prominently located on the main street helped to set the tone for other buildings that create the streetscape.

In addition to the 18th and early 19th century vernacular buildings, there is a significant group of Federal-Greek Revival brick structures. Characteristics include Flemish bond facades, six over six windows with narrow frames beneath jack arches and formal doorways with transoms and sidelights. Dating from the second quarter of the 19th century, construction of these houses, some of which also served commercial functions, occurred during the time when the turnpike from Baltimore to Cumberland was upgraded and became part of the National Pike.

Another period of influence was the 1860s and '70s when continued prosperity resulted in the construction or renovation of several buildings with Italianate features, most notably, massive cornices with brackets, or porches with square posts and molded collars and brackets. One of these Italianate-influenced houses is located at 46 W. Baltimore Street (#617).

Section number 7 Page 3

A fourth era of construction seems to have occurred in the 1910-1930 period resulting in several American Foursquare and bungalow houses. Poplar, Chestnut, Maple, Cemetery and Green Streets were largely developed during the 20th century, as confirmed by the 1877 Atlas map of Funkstown which shows only spotty development along streets other than Baltimore. When development did occur on these secondary streets, the houses were more modest than those found along Baltimore Street. Also in this time period were Colonial Revival style renovations and accretions, most prominently in the form of across-the-front porches supported by round columns. The final phase of development happened in the 1940s, '50s and 1960s when much of Green, Cemetery, and Poplar Streets was developed. The Sanborn Fire Insurance map of 1950 provided graphic determination of buildings constructed in the first third of this phase of development, prior to 1950.

Most houses along Baltimore Street are four, five, or more bays wide. Many have more than one front door suggesting combined residential and commercial use. In the early and mid 19th century, commercial and residential entrances were not particularly distinguishable from one another. There are also some late 19th and early 20th century storefronts at 3-5 W. Baltimore Street (#547) and attached to 2 E. Baltimore Street (#617). An unusual building is the Moderne former Nash automobile dealership at 108 E. Baltimore Street (#643). Probably constructed about 1940, it has a Carrara glass facade in black and white with horizontal banding and curved corners.

In addition to these buildings, there are other features such as iron fences and stone retaining walls. These help to define the visual character of the district as well. Funkstown has few alleys, so lots run from street to street, instead. This situation has encouraged the division of lots to provide separate properties facing onto the "back" streets. Where properties have not been divided, the backs of lots are occupied by frame sheds or garages. Back yard outbuildings include sheds, summer kitchens, occasional smoke houses, and garages.

The town cemetery is also an important element of the district. It takes up nearly an entire block between Antietam Street and West Side Avenue and Cemetery and Green Streets. The east end of the cemetery is marked by a stone retaining wall and the entire area is enclosed with an iron fence. The headstones at the east end of the cemetery carry death dates from the late 18th and early 19th centuries and German inscriptions. Space for the cemetery was set aside in the original town plan.

Section number 7 Page 4

No above-ground remains are to be seen of Funkstown's two main industrial sites. The larger, the Funkstown Manufacturing Company produced woolen goods and carpets and was located behind the present fire hall on the south side of Oak Ridge Drive and near the creek. This site also was the location of the early powder mill, paper mill and grist mill. The other mill site was at the foot of South High Street, to its east. An old road trace and stone retaining wall only suggest the mill site. This mill was apparently gone by 1877 since it does not appear on the Atlas map of that year, but it is shown on the 1808 Charles Varlé map and the 1858 map of Washington County.

Funkstown is contained on three sides by the creek which provides a natural boundary for the district. The town's eastern boundary forms the fourth side. Although these boundaries include a substantial number of non-contributing properties, particularly on Cemetery, Greene and Poplar Streets, the natural boundary formed by the creek and the creek's significance as a power source to the development of Funkstown makes its use as the historic district boundary justifiable.

The buildings in the district are in general well maintained.

Property Descriptions:

North West Side Avenue

2-4 N. West Side Ave., Survey # WA-I-615

C. 1850, Contributing- 1

This two story, six bay brick house is located on the northwest corner of Baltimore Street and West Side Avenue. It is constructed entirely in common bond with six over six windows with wide wooden lintels. Entrances are located in the two central bays, forming two three-bay town house units. An early 20th century porch extends across the entire front elevation. The building's architecture suggests an 1850s or 1860s construction date with influence from the Greek Revival style evidenced mainly in the window and door lintels.

6 N. West Side Ave., Survey # WA-I-616

C. 1850, renovated C. 1890, Contributing- 2

This brick building is a two story, three bay structure which appears to have been initially a one story gable fronted building dating from the mid 19th century, enlarged by the addition of a second story in the Italianate style, about 1890. This supposition is supported by a visible horizontal line in the masonry between the first and second story windows. Each edge of the "line" has a downward diagonal turn following an old gable line indicating that the original

building was one story and gable fronted. It is constructed entirely in common bond. First story windows have nine over nine light sash beneath wide wooden lintels typical of the mid 19th century. The second story windows have six over six lights with segmentally arched brick headers. The roof is of the shed type with a large bracketed cornice. This was originally the Dunker Church, and if constructed like other such churches in the area was a simple gable fronted one story structure, as this appears to have been. A 1920s frame one bay garage is located on the north edge of the lot.

Located on the northwest corner of Poplar and Antietam Streets is this one and a half story, three bay log house modified to resemble a bungalow. An added two bay shed dormer extends across the south slope of the roof. A large exterior stone chimney is located against the west end wall. The building is covered with aluminum siding. Windows have six over one light sash. The entrance is in the west end bay and is sheltered by a shed roofed porch. It appears that this house dates from the 19th century, but was remodeled in the 1920s or '30s. A post-1970s block garage is also located on the lot.

4 W. Poplar St., Survey # WA-I-668
C. 1870-1890, Contributing- 2

This two story, three bay log house is of frame construction and covered with vinyl siding. It has a shed roofed L-extension to the rear. Windows have two over two pane sash, although at least one window has six over six light sash. The main entrance is located in the central bay. A modern Colonial style porch extends across the front. A frame shed, contemporary to the dwelling is also on the lot.

10 W. Poplar St., Survey # WA-I-666
C. 1870, Contributing- 2

This one and a half story log house is covered with insul brick siding. Windows have single pane sash within architraves with pointed tops. The main entrance is located in the west bay of the front elevation. A shed roofed porch extends across the front. There is also a one story shed extension to the rear. The window trim and roof of this structure suggest a construction date in the 1880s. However, the log structure beneath may be older. A frame workshop is also located on the lot.

12 W. Poplar St., Survey # WA-I-667
C. 1870, Contributing- 1

This vinyl sided log house is a two story, three bay structure with a shed extension to the rear. Notable about the building is the fact that the placement of the second story windows is not at all related to the pattern of the first story windows. This suggests that the second story may have been added. Windows have two over two pane sash. The front entrance is located in the west bay of the front elevation. A hip roofed porch extends across the front. Its support system has been replaced.

Located on the north side of East Chestnut Street is this two story, three bay frame house with a German sided front. Windows have single pane sash and there is a semi-hexagonal projecting bay at the west side of the front elevation. Windows have architraves with molded flat tops. The main entrance is located in the center bay of the front elevation. The hip roofed porch across the front is supported by round columns. A frame outbuilding with German siding is also located on the lot.

10-12 E. Chestnut St., Survey # WA-I-654

C. 1900-1910, Contributing- 1

This two story, three bay frame house is covered with aluminum siding. It has a two story semi-hexagonal projecting bay at the west side of the front elevation. Windows have single pane sash within architraves with molded flat tops. The main entrance is located in the central bay of the front elevation. A porch supported by round columns extends across the front.

14 E. Chestnut St., Survey # WA-I-655

C. 1900-1910, Contributing- 1

This three bay, two story vinyl covered frame house is similar to its neighbors to the west. It has a central entrance and a semi-hexagonal projecting bay at the west side of the front elevation. Windows have two over two pane sash. A porch across the front is supported by round columns. The entrance retains a four-panel door.

16 E. Chestnut St., Survey # WA-I-656

C. 1910, Contributing- 4

This foursquare style house shows influence of the Queen Anne style with a two story semi-hexagonal projecting bay beneath a pedimented roof. It is a three bay structure with a central entrance. Windows have single pane sash. A hip roofed porch supported by round

columns extends across the front. Typical of foursquares, the house has a hipped roof. There is also a frontal pedimented dormer. Also located on the lot are two frame shed/work shops with aluminum siding, and a frame 1920s garage with German siding and cross-braced board and batten doors.

20 E. Chestnut St., Survey # WA-I-647

C. 1870, Contributing- 1

This house is a one and a half story, three bay building, probably of frame construction. The walls are covered with aluminum siding and brick veneer. The main character-defining feature is the central cross gable. Windows have two over two or single pane sash. The main entrance is in the center bay of the front elevation. The door is sheltered by a shed roofed porch.

Although modified at the exterior, this building appears to have been a Gothic Revival style cottage, the only one of its type in Funkstown.

21 E. Chestnut St., Survey # WA-I-648

C. 1930, Contributing- 1, Non-contributing- 1

This brick American Foursquare style building was moved to this site from its original location on Baltimore Street in 1980. It was constructed as the Lutheran parsonage in 1930. It is a two bay structure with the typical hipped roof and hip roofed dormer. Windows have single pane sash with the front bay having a triple window and the west front second story bay having a double window. The front entrance is in the east bay of the north elevation and is sheltered by a one-bay Colonial Revival style gabled porch. A post-1970 frame garage is located on the lot.

31 E. Chestnut St.

C. 1950s, Non-contributing- 1

A concrete block "modern" dwelling with flat roof with wide eaves and steel casement windows.

100 E. Chestnut St., Survey # WA-I-646

C. 1870-1900, Contributing- 1

This two story frame (possibly part log) house is a three bay structure covered with asbestos shingle siding. Depth of the window and door jambs at the first story suggest that it may be of log construction with a framed second story added. Windows have single pane sash with molded flat-topped architraves. The entrance is in the center bay of the front elevation. A porch extends across the front and has been modified by the replacement of its columns.

Located on the northeast corner of Antietam and Chestnut Streets is this frame American Foursquare style dwelling. Covered with German siding it appears to retain most of its original exterior features. It has the characteristic hip roof with hipped roof dormers. Windows have single pane sash within architraves with molded flat tops. There is a wraparound porch supported by round columns. Across the front elevation are four bays. There is a semi-hexagonal projecting bay at the west side of the south (front) elevation.

102 N. Antietam St., Survey # WA-I-657

C. 1840-1850, Contributing- 1

Formerly the Methodist-Episcopal Church, this one story three bay brick structure is located on the northwest corner of Antietam and Chestnut Streets. Its gable end front faces onto Antietam Street. Windows have nine over six light sash within narrow frames. The two front windows have been altered into projecting bays. The main entrance is located in the central bay. A porch has been added across the front.

106 N. Antietam St., Survey # WA-I-658

C. 1910, Contributing- 2

This foursquare style house is a three bay frame structure with German siding at the first story and wooden shingles at the second story. Windows have six over one light sash with a semi-hexagonal projecting bay at the second story level. There is also a projecting bay on the north side elevation. The hip roof has hip roofed dormers. The main entrance is located in the center bay of the front elevation. A wraparound porch is supported by square columns on brick bases. On the north side of the lot is a 1920s frame jerkinhead roof garage, with German siding and cross-braced doors.

This commercial structure appears to date from the early 20th century and shows influence of the Spanish Colonial Revival style. Walls are constructed of rock-faced concrete block or "patent" stone. It is a seven-bay-wide building with single pane sash windows. At each end of the second floor front are semi-hexagonal projecting bays. Entrances are located in the second, third, fifth and sixth bays. First floor windows are larger than those at the second floor with plate glass and transoms. A distinctive feature is the overhanging pent roof supported by massive brackets. The present building either conceals or replaces an earlier building on this lot.

10-12 W. Baltimore St., Survey # WA-I-629

C. 1850, Contributing- 1

The exterior of the two story, six bay brick double house suggests a construction date in the mid 19th century. The brick surface, however, looks to be a veneer over a contemporary or earlier log structure. Windows have two over two pane sash beneath wide wooden lintels. Entrances are located in the two central bays. Both doors are sheltered by a hip-roofed hood.

14-16 W. Baltimore St., Survey # WA-I-628

C. 1840-1860, Contributing- 1

Five bays wide and constructed of brick, this two story house has common bond brick work at all elevations. It appears to date from the mid 19th century but could be brick casing over an earlier log house. Windows have wide wood lintels with single pane sash. Entrances are located in the second and fourth bays. The west entrance has an arched hood supported by brackets. The east entrance has a fancy cast iron porch reflecting Italianate influence. The roofing material is standing seam sheet metal. The eaves are trimmed with a prominent bracketed cornice band.

18-20 W. Baltimore St., Survey # WA-I-627

C. 1830, Contributing- 1, Non-contributing- 1

This is a two story, three bay log house with a two story, two bay shed extension. It is covered with asbestos shingle siding. Windows have two over two pane sash except for the first floor of the frame section which has six over six pane sash. The house has three front doors, two in the original section in the second and third bays from the west end. Another entrance is constructed into the addition against what was the east end wall of the main section. The many doors suggest that this has served as an apartment building or a combined commercial and residential structure. Visible exterior features date from the 20th century although the log building is much older, and may date from the 1830s. A post-1970s frame two bay garage is located at the north end of the lot.

24 W. Baltimore St., Survey # WA-I-626

C. 1820-1850, Contributing- 1

This house is a two story, three bay log structure covered with vinyl siding. Openings are irregularly spaced across the front with a closely placed window and door at the west side of the front and the east window placed far to the east. At the second story there are just two windows, there being no central second story window. Windows have single pane sash and a hip roofed dormer window has been added to the front roof. A hip roofed porch extends across the front.

Visible exterior elements of this house date from the 20th century, but the structure beneath could be much older.

26-28 W. Baltimore St., Survey # WA-I-625
C. 1910-1915, Contributing- 1

This stuccoed frame foursquare duplex dates from the early 20th century. It is typical of its style with a hipped roof, hip roofed dormer and an across-the-front porch. Windows have single pane sash and the two entrances are in the central bays. The spacing between the windows is irregular which is unusual for foursquares.

30 W. Baltimore St., Survey # WA-I-624
C. 1880, Contributing- 1

This frame building, now used as a dwelling was probably originally a commercial structure. It is a two story, three bay Italianate style building with an added simulated stone veneer facade. Another added feature is a neo-Victorian hip-roofed porch. Windows have single pane sash except for those at the first story front which have been replaced. Entrances are located in the second and third bays from the west end. A distinguishing feature of the building is the low pitched shed roof and the prominent, bracketed cornice band across the front.

32 W. Baltimore St., Survey # WA-I-623
C. 1790-1800, Contributing- 1

This stone house probably dates from about 1800. It is a two story, four bay structure of roughly coursed limestone. Stone jack arches are present above the doors and windows. This characteristic is typical of stone construction in Washington County from approximately 1780-1810. Windows have six over six pane sash within narrow frames which are probably replacements of the originals. The main entrance is located in the second bay from the west end. A transom is included above the door. A bracketed cornice band trims the eaves.

34 W. Baltimore St., Survey # WA-I-622
C. 1850, Contributing- 1

This two story, three bay brick house has a one bay frame extension. The brick walls are laid in common bond with brick jack arches above the windows. Windows have narrow frames which hold two over two pane sashes. The frame section is covered with plain lapped siding with a semi-hexagonal projecting window bay. The projecting bay windows have single pane sash. The main entrance is in the third bay from the west end of the house. There is a one bay hip roofed entrance porch supported by turned posts. This house appears to date from the mid 19th

century.

36 W. Baltimore St., Survey # WA-I-621

C. 1870, Contributing- 1

Probably built about 1870 is this two story, five bay brick house. It has a symmetrically arranged facade with common bond brick work at all elevations. Windows are large with two over two pane sash. The main entrance is located in the center bay and includes a broad transom and sidelights around the door. Across-the-front porch is supported by square posts. Projecting from the roof is a hip roofed dormer which probably dates from the early 20th century. The cornice is defined by a series of brackets, influenced of the Italianate style. The design of the house reflects a blend of Greek Revival and Italianate influence.

38 W. Baltimore St., Survey # WA-I-620

C. 1840, Contributing- 1, Non-contributing- 1

Attached to its neighbor to the west is this two story, three bay brick house influenced by the Greek Revival and Italianate styles. The entire building is constructed in common bond. Windows have nine over six light sash beneath wide wood lintels with decorative corner blocks. The entrance is located in the west bay of the front elevation. It includes a transom and an Italianate porch with a concave hipped roof and wooden detail work executed to suggest iron work. This is a character-defining feature of the house. This appears to be a very intact example of an 1840s brick house. It is located prominently along the route of the National Pike. A post-1970s frame garage is located at the north end of the lot.

40 W. Baltimore St., Survey # WA-I-619

C. 1850, Contributing- 1, Non-contributing- 1

This house is a two story, five bay structure covered with aluminum siding. It is probably of log construction. The facade is formally arranged with a central entrance flanked by two windows. Windows have six over six pane sash. The main entrance is surrounded by a broad transom and sidelights. There is a three-bay entrance porch supported by square posts with brackets. It appears to date from the 1850s and is influenced by the Greek Revival style as evidenced by the entrance treatment (sidelights and transom). A post-1970s frame garage is located at the north end of the lot.

Windows have six over six pane sash. The two eastern openings in the front elevation are offset to the east. The front entrance is in the central bay and includes a transom. Character-defining features include an added cross gable with a double window from the 1890s or early 1900s and an early 20th century porch. The house is much older and of log construction. The siding is bevel-topped weatherboarding, a forerunner of German siding.

46 W. Baltimore St., Survey # WA-I-617
C. 1860, Contributing- 1

This house, located on the northeast corner of Baltimore Street and West Side Avenue is a two story, five bay brick house with common bond brick work at all elevations. The front elevation is symmetrically arranged with a central entrance with windows arranged in pairs on either side. The upper windows have six over six light sash while first story front windows are elongated in the Italianate manner with triple hung sash, each with two panes. The main entrance in the central bay has a transom. Across the front is a one story porch supported by square posts with brackets. The roof is very low pitched with a bracketed cornice. The lot is partially enclosed with an iron fence. This house is a highly intact example of an Italianate dwelling.

East Baltimore Street, North Side

2 E. Baltimore St., Survey # WA-I-632
C. 1820, Contributing- 2

Located prominently on the northeast corner of Baltimore and Antietam Streets is this two story, three bay L-shaped brick house. It uses Flemish bond brickwork at the front elevation and common bonding at the side and rear walls. Tall jack arches are above the openings. Windows are large with six over six pane sash within narrow frames. The main entrance is in the third bay from the west end and includes an eight-panel door with delicate flanking colonnettes, a broad transom and sidelights. The roofing material is standing seam sheet metal. Attached to the east side of this building is a one story storefront, which although remodeled may date from the early 20th century. A German sided frame shed is also on the lot.

6 E. Baltimore St., Survey # WA-I-633
C. 1900, Contributing- 1

This late Queen Anne style house is distinguished by the semi-hexagonal corner tower with its polygonal top and a steeply pitched cross gable. The house is a two story, four bay L-shaped structure with all stretcher bricks used at the front elevation and common bonding used elsewhere. Windows in the brick section have arched heads, most of them segmental. The second floor eastern three windows are fully round-arched. All windows have single pane sash.

1825-1830, Contributing- 1, Non-contributing- 1

This two story, six bay two-part brick house has a Flemish bond facade. It was probably built about 1825 and renovated in the late Italianate period as indicated by the massive cornice with paired brackets, and the arched cornice over the main entrance. The house actually consists of two window-window-door units with entrances in the third and sixth bays. First story windows have been elongated and outfitted with two over two pane sash with arched upper panes. Upper story windows retain their original six over six pane sash. All have brick jack arches. The Italianate renovation to the house probably occurred in the 1870s. A post-1970s frame four bay garage is located on the north end of the lot.

12-14 E. Baltimore St., Survey # WA-I-635
C. 1850, Contributing- 2

This house is a two story, four bay veneered log structure covered with brick at the first story. The second story is aluminum sided with only three bays and may be an addition. The fenestration pattern has changed with the addition of a double window in the third bay. Other windows have single pane sash. Entrances are located in the second and fourth bays. A frame garage with two dormers and German siding covered with asphalt shingles is located at the north end of the lot.

16 E. Baltimore St., Survey # WA-I-636
C. 1910, Contributing- 2

This brick Foursquare style house is transitional with influence from the Queen Anne style. It is a brick structure, three bays wide. Bricks are laid in all stretcher bond at the front elevation. There is a semi-hexagonal projecting bay at the west side of the first story and another at the east side of the second story. The second story bay window is beneath a projecting pediment. Windows have single pane sash beneath cast stone lintels. The house has the typical hipped roof and dormer window. The main entrance is in the east bay of the front elevation. A cast stone garage is located at the north end of the lot.

C. 1870s-1880s, Contributing- 1

Probably dating from the 1870s or 1880s, this frame house follows the basic five bay, central entrance plan with updates reflecting the High Victorian Gothic style. Distinguishing features include a one story, semi-hexagonal projecting bay at the west side of the front elevation and a central cross gable with fancy turned trim. Walls are covered with German siding and the cross gable is surfaced with scalloped shingles. Windows have single pane sash within architraves with pointed tops. The main entrance has a transom and trim matching that of the windows.

30 E. Baltimore St., Survey # WA-I-638

C. 1860-1880, Contributing- 1

Now the Funkstown Town Hall, this building formerly served the congregation of the German Reformed Church. It is a gable-fronted Romanesque Revival style brick structure. Bricks are laid in common bond at all elevations. The front elevation is distinguished by extensive corbeling with recessed sections, crenelation and round arched window "shoulders." Openings are fully round arched. The main entrance is in the central bay in a projecting pavilion with a steeply pitched gabled roof. Atop the roof at the front of the building is a square bell tower with round arched openings and a concave hipped roof.

C. 1850-1860, Contributing- 1

The place known as the Keller House, located on the northwest corner of the original town square, is a two story, three bay brick house with a common bond facade. Windows have six over one light sash beneath wide wooden lintels. First story windows have pairs of shutters with four panels each while second story windows have pairs of louvered shutters. The main entrance is located in the east bay of the front elevation and includes a broad diamond pane transom above the door and vertical sidelights. At the eaves is a prominent cornice with brackets.

is a two story, three bay L-shaped structure. It is covered with early 20th century siding with an oversized bead at the bottom edge. Most windows have two over two pane sash with arched upper panes. Windows have pairs of louvered shutters. There is a one story semi-hexagonal projecting bay at the west end of the front elevation. The main entrance is located in the center bay of the front elevation. A shed roofed porch extends across the front. It is supported by turned posts.

C. 1910, Contributing- 1

This stuccoed American Foursquare house is four bays wide with extensions at the rear. Windows have single pane sash and there is a one story semi-hexagonal projecting bay at the west side of the front. A wraparound porch extends along the south and west elevations. The main entrance is located in the central bay.

104 E. Baltimore St., Survey # WA-I-642
C. 1920, Contributing- 1

This combined apartment and commercial structure is a variation of the foursquare style and probably dates from the 1920s. It is stuccoed and has the characteristic hipped roof with dormer windows. It has an extended porch with a drive-through front. Windows have single pane sash and there are plate glass display windows at the first story front. The building seems to have been used as a service station and an automotive garage with the residential area above.

108 E. Baltimore St., Survey # WA-I-643
C. 1940, Contributing- 1

This one story commercial Moderne style building is located at the corner of Edgewood Drive and East Baltimore Street. It would appear to date from the 1940s and has a black and white Carrara glass surface with rounded corners and horizontal banding. The building was originally a Nash car dealership. It has a showroom and display areas at its east end and what appears to have been garage bays. A concrete block addition has been added to the rear of the building.

This combined commercial and residential structure is located on the southwest corner of Baltimore and Antietam Streets. It is a two story, seven bay log building covered with asbestos shingle siding. The west four bays at the first story level have the commercial area with a storefront window and two doors. Windows have two over two pane sash within early 20th century architraves with flattened molded tops. The entrance to the residential section is located in the second bay from the east end. An early 20th century hip roofed porch extends across the front of the residential section. A one story brick kitchen wing extends to the rear. The roof is of standing seam sheet metal and chimneys are located inside the end walls. A long concrete block garage is located behind the building.

C. 1910, (possibly a modified earlier structure), Contributing- 1

This two story, four bay hip-roofed house appears to be an American Foursquare but could be an early 20th century modification of a late 19th century building. It is a brick structure with a four bay facade with two central front doors. At the second story there are just two windows, with no openings above the two central entrances. The windows have segmentally arched heads with single pane sash windows. The doors have similar segmental arches above single pane transoms. An early 20th century hip roofed porch extends across the front.

11 W. Baltimore St., Survey # WA-I-549

C. 1820-1840, Contributing- 1

This one story, four bay brick house is attached to its neighbor to the west and in the late 19th century at least was all part of the same property. It has a Flemish bond facade above fieldstone foundations. Windows have narrow frames and two over two pane sash which are replacements. Windows in the east gable have six over six pane sash. At the rear, the main roof span covers a framed section with a short extension. This was probably originally an open porch now enclosed with siding. The main entrance is located in the third bay from the east end of the house.

15-17 W. Baltimore St., Survey # WA-I-550

C. 1800-1820, Contributing- 1

This two-part log and stone building is attached to its neighbor to the east. It consists of a four bay log structure with a three bay stone addition to its east end. Attached to the stone addition is the one story brick house discussed in form WA-I-549. The stone and log buildings are unified by a double porch extending across the entire front elevation of both buildings and included as part of the main roof span of both. The log portion was probably originally sided, but the siding has been removed. The doors and windows have wide frames. The logs have half dovetailed joints, an unusual and early corner type in Washington County. Doors are located at the first and second story levels, opening onto the porch at both levels. The first story door has a four light transom. The stone section also has wide window and door frames with pegged corner joints. Windows have nine over six light sash at the first story and six over six at the second story. The entrances are in the third bay, against the log section. There is also a front cellar entrance which is reached by descending a flight of steps from the sidewalk.

This large two-part building is of log construction, covered with German siding. It is a two story, eight bay building which appears to have received new exterior finishes and features in the early 20th century. Each section has four bays. The east section has entrances in its third and fourth bays from the east end. The west section has an entrance in its third bay from the west end. All windows have single pane sash within architraves with molded flat tops. Each entrance has a small gabled porch supported by square posts. The rear of the building apparently had a two story porch which has been enclosed. On the roof are a pair of gabled dormers with double windows. The west section of the building at present houses the Funkstown Tavern.

C. 1840, modified C. 1900, Contributing- 2

Located on the south side of West Baltimore Street is this two story, five bay log house. It is covered with asbestos shingle siding and embellished with a central cross gable with fancy cutwork trim. While there are five bays across the second story, there are only four at the first story level with a semi-hexagonal projecting bay taking up part of the two eastern bays. The three western bays are more closely spaced toward the west end of the house. The main entrance is in the central bay, but is offset slightly to the west. A one story porch from the early 20th century extends across the front. The windows have two over two pane sash with arched topped panes. The building may have been constructed in two parts with the west three bays coming first. A frame garage is located at the south end of the lot.

27 W. Baltimore St., Survey # WA-I-553
C. 1825-1840, Contributing- 1

This L-shaped log house is a two story, four bay structure covered with vinyl siding. A notable character-defining feature is the fancy cast iron one-bay entrance porch which probably dates from the third quarter of the 19th century. There is also an iron fence along the front of the property. Windows have single pane sash which replace the originals. The main entrance is located in the third bay from the east end of the house and includes a narrow transom. The extension to the rear apparently had a two story porch along its east side which has now been enclosed.

the second story level. The door is in the central bay of the front elevation and is surrounded by a transom and sidelights. The back wing is said to be much older.

35 W. Baltimore St., Survey # WA-I-555
1769, Contributing- 1, Non-contributing- 1

Built in 1769 for Jacob Funk, this was the home of the town's founder and the oldest dated house in Funkstown. It is a two story, four bay stone structure, built of relatively small, carefully cut stones of the facades typical of the 1760s and 1770s in Washington County. A stone water table, also an 18th century feature spans the front of the house. First story windows and the door are topped with segmental arches, typical of pre-1780 stone construction in Washington County. The windows and some of the window frames have been replaced. They now have two over two pane sash, some with arched tops. The main entrance is located in the third bay from the east end of the house. It may retain its original framing and includes a narrow transom. The entrance is sheltered by a one bay porch which probably dates from the 1860s or 1870s. The east gable end has an added double porch with entrances at the first and second story levels. A wing extends to the rear. A 1960s brick garage is located at the south end of the lot.

Architecturally the house is one of a small group of true Colonial period buildings surviving in Washington County. It follows a modified traditional German plan, unlike several of the other early structures which utilized the central chimney continental plan.

37 W. Baltimore St., Survey # WA-I-556
C. 1790, Contributing- 1

This two story log house probably dates from the late 18th century. It is a four bay structure covered with asbestos shingle siding. Windows have two over two pane sash with arched tops and louvered shutters. The main entrance is located in the third bay from the east end of the house. It is sheltered by a one bay Italianate porch. This place represents the early (late 18th and early 19th century) development of Funkstown along a prominent highway. It is also located opposite the site of the Funkstown Manufacturing Company, an early industrial and mill site.

has smaller decorative shingles. Variation in the size and placement of windows suggests that this building consists of two three-bay log structures put together. Windows for both sections have nine over six light first story windows and six over six light second story windows. Front entrances are located in the third and sixth bays of the six-bay structure. Both entrances have transoms. There is an early 20th century one story porch across the front and a hip-roofed dormer with double windows, also from the early 20th century. A two story wing with a double porch extends to the rear. Immediately behind the building, facing the rear door, is a frame wood shed with German siding. In the southwest corner of the lot, facing onto S. Antietam St. is a stone and frame barn, converted to a garage.

5 E. Baltimore St., Survey # WA-I-545

C. 1820, (with additions), Contributing- 1

This multi-part house is a two story, five bay structure with stone, brick and frame sections. Apparently a one story, four bay stone section was built first, followed by a one story, one bay brick addition to the east end, followed by a frame second story. The frame section has plain lapped siding and flat topped architraves. A hip roofed dormer with double windows extends from the roof. These elements suggest that the second story was added about 1910. Windows on all parts have single pane sash. The east entrance has a four light transom above it; the west entrance does not. An early 20th century porch supported by round columns extends across the front.

7-9 E. Baltimore St., Survey # WA-I-544

C. 1820, Contributing- 1

This two story, five bay stone building may have originally combined commercial and residential functions. It has two front entrances which appear identical, on the second and fourth bays. The stones forming the walls are roughly coursed with small central stones above the openings suggesting keystones. This type of stonework in the Cumberland Valley is associated with the 1815-1825 period. Windows are located within wide beaded frames and have six over nine light sash. The two front doors open onto a balustraded deck. Above each entrance is a small pedimented hood. These appear to be the result of recent rehabilitation efforts.

C. 1870, Contributing-1

This frame house was probably built in two parts. It is covered with imitation stone insul siding. What appears to be the older section is the east and has three bays with a central entrance. To this section is added a two story, two bay addition, to make the entire structure five bays wide. A shed roofed porch supported by square posts extends across the entire front elevation. Entrances are located in the second and fourth bays from the east end of the house. Windows have single pane sash.

33-35 E. Baltimore St., Survey # WA-I-537

C. 1850, Contributing-1

This brick cottage is a one and half story, three bay structure, built into a slope with the ground floor fully exposed at the front elevation. This area is of stone with the main level of brick above. A bi-level shed roofed porch shelters the ground floor and provides access to the upper level. This porch is supported by large square posts and probably is a replacement of an earlier porch system. A shed-roofed, one story brick addition is attached to the east gable end. The main house has a curvilinear barge board suggesting Gothic Revival influence. Windows, within narrow frames have either single pane or six light sash. The entrance at the upper level is in the center bay and at the lower level in the west bay.

41 E. Baltimore St., Survey # WA-I-536

C. 1850-1860, Contributing- 3

This large house is located on the southwest corner of the intersection of Baltimore and High Streets. This intersection was designated in the original plan as the town square and the front section of each lot was reserved to create the square. The house is a two story brick structure with a low pitched hipped roof and prominent facades facing Baltimore and High Streets. The house has mixed Italianate and Greek Revival influence with Colonial Revival accretions in the Palladian dormers and the pedimented front porch. One character-defining feature is the large overhang at the eaves with paired brackets reflecting the Italianate style. The Baltimore Street facade has four bays with the entrance in the westernmost bay. The High Street facade has six bays with an entrance in the third from the north end bay. Two frame outbuildings with vertical board siding and concrete block additions are located in the south-west corner of the lot.

This frame house is a two story, three bay structure covered with aluminum siding. It has two over two light windows and a central front entrance with a transom. A flat-roofed porch extends across the front elevation. A frame out-kitchen with German siding and brick chimney, and a frame 1920s style one bay garage with cross-braced doors are also located on the lot.

118 S. West Side Ave., Survey # WA-I-584
C. 1850, Contributing- 1

This small house is a one story, three bay frame or log house covered with aluminum siding. An early 20th century hip roofed porch extends across the front. Windows have two over two pane sash with arched upper panes. The entrance is in the center bay.

119 S. West Side Ave., Survey # WA-I-587
C. 1830, Contributing- 1, Non-contributing- 1

This one and a half story brick house is located on the northeast corner of West Cemetery Street and West Side Avenue. It is a three bay structure with a central entrance. Windows have six over six sash within narrow frames. A partially enclosed porch extends across the front. The house probably dates from the 1830-1850 period. A concrete block one story workshop is located

This gable-fronted L-shaped house is a two story, two bay structure covered with aluminum siding. Windows have single pane sash within architraves with molded flat top pieces. The second story front windows are doubled, and at the first story is a semi-hexagonal projecting bay and an entrance. Both are sheltered by a flat roofed entrance porch.

122 S. West Side Ave., Survey # WA-I-586
C. 1890, Contributing- 1

This two story, three bay brick house probably dates from approximately 1890. The brick walls are laid in common bond with eight courses of stretchers between header rows. This pattern is typical of the late 19th century. There are also brick segmental arches above the window and door openings. Windows have two over two light sash. The main entrance is in the center bay of the front elevation. A hip roofed porch extends across the three front bays.

200-202 S. West Side Ave., Survey # WA-I-588
C. 1850, Contributing- 1

This two story log house seems to have gone through several modifications. It is a two story, four bay structure covered with aluminum siding. Windows are of various sizes and types and placed irregularly, suggesting that some may have been added or altered. Windows at the first floor front have two over two pane sash. The others are single pane. Dormer windows have been added to the roof. Entrances are located in the first and third bays from the south end of the building. There is a shed roofed porch across the front and a shed extension at the rear.

C. 1950s, Non-contributing- 1

This Cape Cod-style house is a one and a half story, three bay structure with a central entrance and dormer windows.

West Maple Street

1 W. Maple St., Survey # WA-I-571

C. 1870, Contributing- 3

This two story, three bay vinyl sided log house is located on the southwest corner of Maple and Antietam Streets. Exterior elements and trims are of recent vintage. The main entrance is located in the central bay of the front elevation, but offset to the west against the west front window. A one story porch extends across the front. A house like this is almost impossible to date from observation of the exterior. The first story door and window placement which does not relate to that of the second story could suggest an early one-story house to which the second story was added. A cast stone garage and a frame shed are also located on the lot.

4 W. Maple St., Survey # WA-I-574

C. 1920, Contributing- 1

This one and a half story, three bay stuccoed framed structure has bungalow features, but may be an early 20th century vernacular house modified in the 1920s or '30s to look like a bungalow. The dominant feature is a large gabled front wall dormer with a pair of doubled sash windows. The house is two bays wide with a triple front main level window and a door. A hip roofed porch extends across the front.

8 W. Maple St., Survey # WA-I-575

C. 1920, Contributing- 1

This small frame house is a one story, two bay "shotgun" house, gable-fronted and covered with aluminum siding. At the front elevation is a door and a window with a second window in the gable. The house is three bays in depth with shed extensions to the rear. A small entrance porch extends across the front.

This is an unusual house type for Funkstown and Washington County. The building may have been modified from some other function.

39 E. Maple St., Survey # WA-I-563

C. 1870, Contributing- 1

Located on the southwest corner of Maple and High Streets is this small log house which probably dates from the 1870s. Now covered with asbestos shingle siding, it is a two story, three bay L-shaped building. Windows have two over two pane sash within architraves with molded flattened tops. There is no opening in the central bay at the second story level. The main entrance is located in the east end bay of the front or north elevation. It includes a narrow transom. A two bay hipped roof porch extends across the front. A hip roofed dormer has been added to the roof.

101 E. Maple St., Survey # WA-I-558

C. 1910, Contributing- 1

Located on the southeast corner of Maple and High Streets, this is one of a group of three American Foursquare style houses on the south side of E. Maple Street. They were probably all built by the same person around 1910. It is covered with German siding and has a wraparound porch. It is a two story, three bay structure with the characteristic hipped roof. The roof covering is slate and there are hip roofed dormers. Windows have single pane sash. A second story window on the High Street facade has a semi-hexagonal projection. A wraparound porch protects the Maple and High Street elevations. An iron fence encloses the yard.

103 E. Maple St., Survey # WA-I-559

C. 1910, Contributing- 1, Non-contributing- 1

This American Foursquare example is covered with aluminum siding. It is a two bay structure with a semi-hexagonal projecting bay and the entrance at the front elevation. The house has the characteristic hipped roof and a hip roofed dormer. Windows have single pane sash. A shed roofed porch extends across the front. A concrete block garage is also located on the lot.

C. 1890, (reconstruction of early log house?), Contributing- 1

This is a two story, three bay L-shaped brick house. The bricks forming the walls are laid in common bond. All second story openings are topped with segmental arches of brick. First story openings have splayed jack arches. Windows have nine over six light sash, characteristic of the early 19th century. The main entrance is located in the center bay of the front elevation and includes a narrow transom. A two story wing to the rear has a double porch along the east side. The use of nine over six windows and the change in the type of brickwork at openings between the first and second stories suggests that this may be in part an older house, perhaps a one story log building enlarged to two stories and encased with brick.

C. 1935 (appears to have been drastically renovated in 1999), Non-contributing- 1

This previously 1 ½ story, three bay house of frame construction covered with asbestos shingles, is now two stories covered with vinyl siding. Windows still have single pane sash but appear to be replacement. The west window of the south elevation previously a projecting bay is now a three-part picture window. Gabled dormers in the roof were probably removed with the raised roof. The front entrance is in the center bay of the front elevation. A two story porch with square posts shelters the front. The concrete block foundation appears to be original, with cross-braced double shed or garage doors on the west entrance to the basement.

This two-part log house is partially encased with brick. The house is L-shaped with a two story, gable fronted section and an attached one story two bay section arranged perpendicular to the two story part against its west side. The front elevation of both parts has been cased with brick while the remainder has lapped wooden siding. The west section once had an exterior brick chimney which has been removed. Windows have single pane sash and the door, located in the west front bay of the two story section is covered with plywood.

113 E. Green St., Survey # WA-I-611

C.1890-1900, Contributing- 1

This house may date from the turn of the century. It is a one story, three bay house, covered with wide lapped wooden siding of the 1940s or '50s. Windows have six over six sash within architraves with pointed tops and molded "keystones." The main entrance is located in the central bay. Certain features such as the windows at trim suggest construction in the 1880s or 1890s. Other features appear to date from the 1940s.

This stuccoed frame bungalow is located on the northwest corner of Antietam and Maple Streets. It is typical of bungalows with one and a half stories, a deep front porch and dormer windows. This example has front and rear gabled dormers. Windows are doubled or tripled with upper sash with four vertical lights and lower sash with single panes. In the south gable wall is a square projecting bay. The dormers and gables are shingled while the main walls are stuccoed. A later concrete block and frame garage is located behind the dwelling.

Currently known as the Edmar Manor Bed and Breakfast, this is a stuccoed house, presumably of stone and log construction which has been modified several times. An L-shaped structure with a combination gable and hip roof, it has five bays on the High Street facade and five on the Maple Street facade. The house has been unified by application of stucco. It has single pane sash windows, an added semi-hexagonal projecting bay and an early 20th century two story porch across the front. The present front entrance on the High Street side is surrounded by a transom and sidelights. An early concrete block garage with hipped, slate roof and dormer and cross-braced double doors is located on the south side of the lot fronting onto Green Street. A post-1950 concrete block workshop/guest house is located along the east edge of the lot.

Although this log house has had a few exterior modifications it appears to be a quite early structure displaying Germanic traditions. It is a two story, three bay structure covered with bevel topped siding which probably dates from the 19th century. Windows vary in size and placement. They have six over six pane sash. First floor front windows have been modified to create a triple window group. Second story windows are spaced with two windows in the south half of the facade and one in the north half. The front entrance is set well to the north end of the front wall. The window and door placement pattern suggests that this house may have originally had the

STATEMENT OF SIGNIFICANCE:

SIGNIFICANCE SUMMARY:

The Funkstown Historic District reflects a unique set of events or conditions that created the community's patterns of development. The power source provided by the Antietam Creek led to a variety of industries which were established early at this location. The textile industry was prominent among these causing Funkstown to be one of the early centers of the manufacture of Brussels carpet in America. The old wagon road, the main route from Baltimore to the west had a tremendous impact on the town. As it eventually became part of the National Pike in the 1820s, the town experienced rapid growth along the route (Baltimore Street) with hotel and tavern businesses predominating. Civil War history also impacted Funkstown. The July, 1863 Battle of Funkstown was an important delaying tactic by the Confederates. The resulting casualties were cared for by the citizens of Funkstown. The town's citizens were very divided in their sentiments, pro-South and pro-North. Funkstown's particular history is reflected in its architecture and other historic resources, making it eligible for listing in the National Register of Historic Places. It is eligible under Criterion A for its significance in the areas of transportation, military, and industrial development, and under Criterion C for its architectural character, representing adaptations of several important styles and types. The period of significance spans the period from the town's original layout in 1767 to a date fifty years in the past.

HISTORIC CONTEXT:

Resource History

A plan for a new town to be known as Jerusalem was established in 1767, on land within a horse shoe bend of the Antietam Creek, by its owner, Jacob Funck (Funk) and his older brother Henry. The Funck brothers had been born in Switzerland, but the family came to America and settled in Orange County, Virginia in 1734. The Funck brothers began purchasing land along the Antietam Creek in Maryland in 1753. Henry acquired the first piece consisting of the present site of Funkstown, which he sold to his brother Jacob in 1755. Jacob bought 350 acres more in 1757 and an additional 2053 acres in 1762.

During the time that Henry and Jacob were purchasing land, the frontier of Maryland, Pennsylvania and Virginia was threatened by the hostilities of the French and Indian War. While

County and State

Section number 8 Page 3

the Hagerstown Valley remained generally peaceful, a great deal of violence occurred a short distance to the north in the Cumberland Valley portion of Pennsylvania. The overall affect was widespread panic with white settlers abandoning their farms and fleeing east. Perhaps such conditions operated to allow Jacob Funck to purchase almost 2500 acres near the Antietam, some of which became the site of Funkstown. By 1767, Jacob Funck had developed a plan for a village on his land which he named Jerusalem. It had 177 lots measuring 82'6" x 231'. A town square was planned for the intersection of Baltimore and High Streets. The sale of lots began in 1768, with lots 138 and 139 along Antietam, Cemetery and Green Streets held for a cemetery and church. Although no church was ever built on these lots, the cemetery was established and now takes up almost the entire block from Antietam Street to West Side Avenue between Cemetery and Green Streets.

Jacob Funck had a house built for himself in 1769 on lot 165 at 35 West Baltimore Street. The house, a stone structure, still stands and has a date tablet marked 1769 in its west gable end. This may be the oldest remaining house in Funkstown. The other very early (pre-1780) houses apparently were of log construction which would have made Jacob Funck's house stand out as distinctive.

Most of the people who settled in Funkstown, as Jerusalem eventually came to be called, were Germans. The first churches were Lutheran and German Reformed, where services were given in German until the 1830s. In 1794, Dr. Christian Boerstler, a Bavarian arrived in Funkstown with 70 German families intending to settle. As a medical practitioner, horticulturalist and beekeeper, he became an influential citizen of the place. He died in 1833, leaving a considerable fortune.

Economic (Commercial and Industrial):

The Funck brothers, in 1762 established a mill on the Antietam Creek, on the east side just south of present-day Oak Ridge Drive. Some sources simply say it was a mill; others say it was a paper mill. By 1785, the town, along with Washington County had begun to grow and prosper. Funkstown had an iron furnace, brick yard, powder factory, grist and woolen mills and a host of inns and shops.

Dr. Christian Boerstler, apparently a man of many interests, had become proprietor of the powder mill on the Antietam by 1804. It was located on the east side of the creek on the south side of the present Oak Ridge Drive. By 1816 it was known as the Jerusalem Manufacturing Company. In 1812, Jacob and Michael Conradt established a woolen factory apparently in association with

National Park Service

National Register of Historic Places
Continuation Sheet

Funkstown Historic District

Name of Property

Washington County, Maryland

County and State

Section number 8 Page 4

Martin Funk who owned a wool carding machine. The Conradt mill produced cassimeres (a woolen cloth), kerseys (a lightweight woolen cloth with cotton warp), flannels and blankets. By 1815, the Antietam Woolen Manufactory as the Conradt establishment was called, had opened a retail outlet in Hagerstown. The Antietam operation was managed by Henry Shafer and Gerard Stonebraker. The woolen mill by 1829 was producing ingrain carpets, and a few years later, Brussels carpets, prior to the factory's destruction by fire in 1834. If this factory was producing Brussels carpeting in the 1830s, it certainly would be among the earliest of such manufacturers in America. An English weaver was brought to Funkstown to weave the Brussels carpet. His "Rose of England" and "Thistle of Scotland" patterns are said to have achieved some prominence.

Other industries in Funkstown included flour and saw mills, more typical of the region in general. The textile industry seems particular to Funkstown and was an important part of its history.

Funkstown's economy also thrived on a lively hotel and tavern business which came about because of the location on the busy turnpike leading from Baltimore to the West. The hotel and tavern trade was strongest in the first half of the 19th century before canals and railroads siphoned away the turnpike's freight and passenger traffic.

Scharf's History of Western Maryland lists some of Funkstown's residents in the early 19th century and their occupations. This list underscores the prominence of the textile industry and hotel and tavern keeping in Funkstown's early history.

Martin Funk - had a wool carding machine

Henry Beckly - tavern keeper

Dr. Christian Boerstler - proprietor powder mill, 1804

John F. Shrader - tavern keeper, "Sign of Cross-Keys"

Isaac Patrick - weaver

Jacob Knode - tavern keeper

Daniel Boerstler - manufactured rifle, gun and common powder, 1806

George and Michael Stonebraker - merchants, 1808

Frederick Kehler, Jacob Moyer and Martin Funk - proprietors of carding mill, 1810

John Shafer, Henry Shafer - merchants

Henry Bentz, Abraham Schmutz, Frederick Grosh, Jacob and Michael Conradt - woolen manufacturers

Thomas Fleming - weaver

John Knode - tavern keeper in 1820

Military:

Due to the significance of the Battle of Antietam at Sharpsburg in Washington County in 1862, and the Battle of Gettysburg in nearby Adams County, Pennsylvania in 1863, the other extensive Civil War activity in this Maryland-Pennsylvania border area has been overshadowed and in some cases overlooked. Like many towns in the region Funkstown was affected by comings and goings of both armies throughout much of the Civil War. The Confederate Army passed through Funkstown just prior to the Battle of Antietam, heading for Hagerstown and passed through again as they headed into Battle. Troop passages also occurred before and after the Battle of Gettysburg. Upon the Confederate retreat from Gettysburg, when Lee's army could not cross the Potomac River because of high water, and pursued by Union forces, a clash occurred at Funkstown on Friday morning, July 10, 1863. The Battle of Funkstown involved Confederate General J.E.B. Stuart and Union General John Buford. The purpose of the engagement was to hold the pursuing Union forces at bay while Lee took his army across the Potomac River near Williamsport. The battle occurred north and east of the village, but most townspeople took refuge in their cellars as there were shots fired into the town. At day's end, 479 men were killed or wounded (196 Union, 283 Confederate). The wounded were brought into Funkstown for aid and several houses were used as hospitals. These sites are marked with commemorative signs. Life in Funkstown during the war is depicted in the reminiscences of Angela Kirkham Davis, a resident of Funkstown in the 1860s. Mrs. Davis, whose husband operated a store, was a native of New York state and commented upon the divided pro-southern and pro-union sympathies in Funkstown.

Transportation:

Funkstown's history and development was greatly influenced by the busy highway which is its main street. Baltimore Street which bisects Funkstown and runs east to west through the village

Section number 8 Page 6

was an important wagon road heading from the seaboard to the interior of the country. It then became a turnpike and accommodated drovers, long-distance freight and stage lines and local traffic was well. In 1806, the Thomas Jefferson administration undertook the construction of a federal highway that would lead into the newly acquired Louisiana purchase lands comprising most of the central portion of the United States. This "National Road" began at Cumberland, Maryland and led to Wheeling in Virginia (West Virginia) and later on to Terre Haute, Indiana. The main wagon road from Baltimore to Cumberland, a collection of turnpike segments, was then upgraded to become part of the National Pike. The final link in this series of upgrades was the Boonsboro-Hagerstown Turnpike which was resurfaced and improved in 1823. The new road surface consisted of graduated layers of stone called macadam and was the first road surface of this type constructed in America. The road bed was nine inches deep and 20 feet wide. The pike was one of the most heavily traveled east-west routes in America and made Funkstown a busy place, all hours of the day and night. Stage coaches, freight wagons, herds of swine, geese and cattle headed to market plus individual traffic passed through the village. Taverns, inns and hotels were an important part of this transportation-generated economy. Also important were blacksmith shops, wagon shops, and leather and harness shops. The traffic on the pike waned after the mid 19th century when good rail service was established to Hagerstown, two miles northwest of Funkstown. Activity on the pike did not pick up again until the early 20th century when the advent of the automobile once again increased highway traffic. U. S. Route 40 became a major transcontinental route by the 1920s. Funkstown's main street was nearly fully developed and the early 20th century building activity is seen in construction of a few infill buildings and road houses at the east edge of town and the widening of the stone arched bridge carrying Route 40 across the Antietam Creek.

Early in its history, Funkstown's main street was filled with houses, stores and hotels. Lots along the secondary streets were developed later. This pattern of development is clearly linked to the influence of the National Pike.

Architecture:

Funkstown's architecture reflects its rapid growth and development along what was to become the National Pike. By the mid 19th century, the three blocks between the creek and the point where the pike turns south toward Boonsboro was almost fully developed. The industrial section was located between the creek and Baltimore Street where the Funkstown Manufacturing Company, formerly the Jerusalem Manufacturing Company was located. The other industrial area was at the south edge of the village where the Antietam factory and grist mill were located. All of these

industrial buildings are gone.

The architecture of Funkstown is primarily residential or combined residential and commercial. The oldest dated house in the village is the Funk House, with a tablet recording the year 1769. Mr. Funck, builder of the house, left the area for Kentucky in 1791. After that time the house became a hotel, known as South's. This house is significant individually as an outstanding example and one of only a few surviving true Colonial era Germanic houses in Washington County. It is also important as the home of the town's founder and in the 19th century as one of several inns along the National Pike.

Of particular architectural significance is the town's main street, Baltimore Street, the National Pike. A prominent road when the town was laid out in 1767, it gained importance in the 1820s as it became part of the National Pike. The heavy volume of traffic generated by the Pike encouraged growth and development along its path, resulting in a particular group of Federal and Greek Revival influenced stone and brick buildings, many of mixed residential and commercial use. In the early 20th century when the automobile revived the popularity of the National Road, a few commercial buildings were constructed of cast stone or brick. Residential buildings were updated with the addition of Colonial Revival porches. The former Nash dealership on East Baltimore Street represents the 1940s and is a rare example of Moderne style architecture in Washington County's small towns.

The historic areas of Funkstown remain intact. The village is a cohesive unit because of its geographical arrangement, being bounded on three sides by the Antietam Creek. The village is therefore concentrated into this specific enclosure.

According to the 1990 Census, Funkstown's population is 1136. Scharf's History states that Funkstown's population in 1820 was 538, which included 22 slaves and 10 "free colored." For purposes of comparison, Hagerstown's population in 1810 was 2342. While Hagerstown's population quadrupled in the late 19th and early 20th centuries to about 30,000, largely due to the influence of the four railroads that converged there, Funkstown remained static, causing the town's appearance to remain in many respects as it was in the late 19th century.

During the 19th century, Funkstown's development was concentrated along Baltimore Street. The secondary streets were developed only sporadically until the 1940s and 1950s. Buildings are aligned along the streets with long back lots extending to the next street. These in some cases have been divided into separate lots with infill construction.

VERBAL BOUNDARY DESCRIPTION:

The boundary is shown on the Washington County, Funkstown Tax Map. Beginning at the point where the western boundary line of the property labeled "Map 49-P. 44" meets the east bank of the Antietam Creek, then following the east bank of the creek as it curves to the south to a point where U.S. Rt. 40A crossed the creek, then continuing along the east bank of the creek to a point where W. Baltimore St. (Oak Ridge Drive) crosses the creek, then continuing along the east bank of the creek following the curve as it turns east to the southeast corner of the parcel numbered 117 East Green St. (Mill Site). Then turning north along the east boundary of said parcel to the southwest corner of the parcel numbered 40 Frederick St. (WA-I-688), then turning east along the southern boundary of said parcel to the southeast corner on the west side of Frederick Rd. (U.S. Rt. 40A), then turning north along the east boundary of said parcel to the northeast corner at the intersection of E. Green St. and Frederick Rd. Then crossing E. Green St. to the southeast corner of the parcel numbered 36 Frederick St. (WA-I-689). Then turning east, crossing to the east side of Frederick St. at the southwest corner of the parcel numbered 37 Frederick St. (WA-I-690), then following the southern boundary of said parcel to the southeast corner, then turning north following the east boundary of said parcel, then turning west following the north boundary of said parcel to the northwest corner on the east side of Frederick St. Then following the boundary of the east side of Frederick St. north, crossing E. Cemetery St. to the southwest corner of the parcel numbered 23 Frederick St. (WA-I-604), then turning east following the southern boundary of said parcel to the southeast corner, then turning north following the east boundary of said parcel and the neighboring vacant parcel to the northeast corner on E. Maple St. Then crossing to the north side of E. Maple St. to the southeast corner of the parcel numbered 298 E. Maple St., then following the east boundary of said parcel to the point where said boundary line meets the southern boundary of the parcel numbered 301 E. Baltimore St. (WA-I-684), then turning east along said boundary to the southeast corner of said parcel, then turning north along the east boundary of said parcel to the point in the center of E. Baltimore St. where it joins the boundary line of Funkstown. Then following said town boundary line as it runs north through the center of Stouffer Ave. to a point 100 feet past the northeast corner of the intersection with E. Chestnut St. Then turning west to the northeast corner of the parcel numbered 222 E. Chestnut St. (WA-I-686), then continuing west, following the north boundary of said parcel to the northwest corner of the parcel. Then turning north following the east boundary of the parcel numbered 220 E. Chestnut St. (WA-I-685) to the northeast corner of said parcel, then turning west following the north boundary of said parcel and continuing along the north boundary of the parcel numbered 218 E. Chestnut St. to the northwest corner of said parcel. Then turning north following the east boundary of the parcel numbered 200 E. Chestnut St. to the northeast corner of said parcel on the south side of E. Poplar St. Then turning west along the south side of E. Poplar St. to the southeast corner of the intersection with Edgewood Drive, then turning northwest, crossing Edgewood Drive to the northwest corner of the intersection, then continuing west on the north side of E. Poplar St. to the southwest corner of the parcel labeled "Map 49-P.44", then turning north following the western boundary of said parcel to the place of beginning.

BOUNDARY JUSTIFICATION:

The boundary is based on the historic and natural boundary line of the east bank of the Antietam Creek on the south, west, and north sides of the town. The eastern boundary along Stouffer Ave. includes development along the National Pike, as well as some of the late 19th and early 20th century expansion of Funkstown toward the east where there was no natural creek barrier. East of the eastern boundary there is an increasing concentration of more recent development.
