DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE

### LOCATION AND SETTING:

Eagel Island is the outermost of six islands of size which lie due south of Bailey Island a section of Harpswell. It is 12 miles northeast of Portland and 15 miles south of Brunswick. The setting is isolated, an island fronting on the broad expanse of the Atlantic. Much of the island is covered with trees and shrubs whose roots cling tenaciously to the granitic rock base. There is but little soil. The island is a favorite haunt of sea fowl and the waters about it abound in marine life. This rugged island and the environment about it is a joy to beholder.

## CONSTRUCTION AND MATERIALS:

On this island there are two man made buildings and several associated structures.

The Maine Residence: This building is basically a two story, single bay front, wooden frame, gable roofed cottage; which rises above a stone Taid foundation. The floor dimensions of the basic cottage are 34' by 38'. It is located on the north end of the island and it faces the mainland. The gable roof front holds a continuous dormer window section containing three double mullion windows. The dormer and remaining roof area is covered with asphalt shingles. The profile of the gable approaches being belicase creating an overhang which extends over the width of the full front porch. The porch's middle placed doorway is flanked by triple sash windows on each side. This doorway opens onto a stone laid terrace which meets the natural landscape by a stone stairway with six risers. The rear roof of the basic cottage again holds a continuous dormer with three single sash windows between two double mullions. The second story holds five bedrooms and a wash room. A central chimney passes through the peak of the gable roof. This chimney serves a central living room's stone built fireplace. The rear of the basic building has an attached one story wing 51' long and 34' wide with a low gable roof. The first room holds a bath. The next room is a kitchen which is served by a chimney which passes through the peak of this low gable. This roof is cover by composition roofing. The rear end of this wing holds a dinning area with a bay window. Windows predominate along the outside of the total building, while natural cedar shingles and then finished boards painted white complete the exterior side cover.

The cellar area is the most interesting facet of this building, as it not only underlies most of the building, but extends out and beyond under the front terrace and to both sides where semi-circular rooms were created. These semi-circular rooms are built of stone masonry. The roofs are supported with steel I beams and planks, overlaid with tar and gravel. The stone work of the foundations and these turret-like rooms provide a castle-like appearance. The west side turret was used as a library. The east side turret was an aboretum.

2. Guest Cottage: A single story low hip roofed wooden cottage which is 20' wide and 36' long; lies 200' back and to the west of main residence. This small building rises above a stone laid foundation which underlies a front porch and runs back midway of the length of the building. A single dormer in the front of the hip roof provides light and space for loft sleeping accomodations. The front room is a living room. The second room is the kitchen and the third, a bedroom.

Continuation of Description:

- 3. Pier: This structure is new, having been built by the State Park and Recreation Commission. It serves as an obvious access to the island for varied boating visitors who unlike the original owners are not equipped to land on a rugged shore and contend with a fluctuating tide.
- 4. Retaining Walls: At various locations along the shore, near and about the habitable portion, stone retaining walls have been built to counter sea wash erosion and also to provide space for land fill areas for gardens and shrubs.

The man made structures do not speak in terms of refined architecture. They are vernacular, built to serve functions, but overall the effect is pleasing. These man made structures come to terms with this islands rugged landscape.

Potential Threat: Forces of Nature only.

In 1967 the heirs of Admiral Robert E. Peary deeded Eagle Island to the State of Maine. The buildings were in poor repair and much of the fabric had deteriorated. A major restoration program has been undertaken which will be completed by the fall of 1972. A pier has been built. Masonry has been pointed up. New roof covers will be laid. Walks and terraces will be restored. Trim wull be painted. This program has been initiated by the State Park and Recreation Commission with two purposes in mind. The first is to give an historical recognition of Admiral Robert E. Peary-explorer, engineer and naturalist. The second is to provide a way station for recreation boating enthusiasts. A caretaker is on duty during the summer season; visitors are welcome. The State Park and Recreation Commission will have spent \$200,000 on this project. This historic place and natural area has been saved.

STATEMENT OF SIGNIFICANCE	BACKGROUND:	1.	

Robert E. Peary was born in Cresson, Pennsylvania in 1856 and died in Washington, D. C. on February 20, 1920. His 64 years were spent in a life style envied by many but duplicated by new. Reared in Maine, he graduated from Bowdoin College in 1877, second in his class. From 1881 he was a civil engineer in the U.S. Navy and assistant to the chief engineer of the Nicara-

gua Canal survey in 1884-85. His ambition changed from tropical to polar exploration and in 1886 he sailed north aboard the whaler "Eagle".

In 1891 Peary organized his first expedition to Greenland. Besides his wife, the former Josephine Diebitsch, the party on board his ship "Kite" included Matthew A. Hensen, a negro, and Dr. Frederick A. Cook, surgeon. This expedition proved that Greenland was an island. Peary, with Hansen and and Cook, made trips to the Arctic in 1893-1895, 1896, 1897, 1898-1902 and In 1908 he pushed his new ship, the "Roosevelt" built in Verona, Maine, as far north as Cape Sheridan on Ellesmere Island and on March I, 1909 Peary and his party started across the frozen ice on the dash to the North Pole. On April 6th they were within 3 miles of the approximated North Pole and traveled several miles in every direction from the approximated Pole to be sure that they had not gone past it. During the return journey he reached a telegraph post in Labrador in September of 1909, and it was herb that he first learned of Cook's published claim of reaching the North Pole in Time proved Cook's claim to be false and Peary's claim was the one accepted by scientific experts. In 1911 he became interested in aviation and during World War I was chairman of the National Committee on Coast Defense by air.

## EAGLE ISLAND:

This island was, in distant times, known by coastal Maine Indians as Sawungun. This island gains its historic note in the fact that it became the summer home of Admiral Robert E. Peary. Sawungun was bought by Robert E. Peary in 1880 with the first money which he earned after leaving Bowdoin College in Brunswick, Maine, but it was not until 1904 that he started to build on it. It is a fair assumption that Peary renamed Sawungun to Eagle Island in honor of the whaling ship "Eagle" which first took him to the Arctic. It was in this island home that Peary made his plans for the historic expedition in 1909 which gained the Pole, and it was here that he later devoted his energies to writing, and research on engineering, nature and coastal defense. It was here, also, that he was albe to share the brief periods of his private life with his wife and childre? Robert Jr. and Marie.

In 1966 Mrs. Marie Peary Kuhne, daughter of the late explorer, gave Eagle Island to the State of Maine as an historic site to be used for purposes of recreation and nature study by the people of Maine and their guests in such a manner that its essential beauty would not be disturbed.
