DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Amelung House and Glassworks are located nine miles south of Frederick and four miles southwest of Urbana in Frederick County, Maryland.

When Johann Friedrich Amelung came to Maryland in 1784 he bought about 2100 acres of heavily-forested land in Frederick County. Here he built the Glassworks which he hoped would prove a profitable business in the newly-formed United States. Today there are no longer any above-ground remains of the factory, but Amelung's late-Georgian, brick home still stands on its stone foundation.

The house is situated on the south slope of a hill overlooking Bennett's Creek. It is a two-story building with both an attic and a basement. It has a water table just above the stone foundation and a belt course between the first and second floors. The front and west end of the house are constructed in Flemish bond brick, while the rear and east end are of English bond. Each end is two bays wide. The front is six bays across the second story, and two bays to the left of the door and three bays to the right on the first story. This front entrance has a wide door frame and a transom above its paneled door. Nine steps lead up to the large landing at this entrance.

The windows on the first and second floors are double-hung, with twelve-over-twelve lights. One tall, narrow chimney rises from each end of the "A" roof. There is a wooden cornice with modillions under the eaves.

The interior paneling of Amelung House is original to the house (18th century), except for the ballroom and card room which were dismantled and sold in the 20th. century. They are presently (1972) stored at the Maryland Historical Society in Baltimore. There are four corner fireplaces in the house. The large, deep windows are framed with paneling.

The Amelung House was restored by Mr. and Mrs. Alden Fisher between 1940 and 1947. The present (1972) owners, Mr. and Mrs. Henry Becraft, have also done restorative work on the mansion.

Cver the years since the Glassworks were sold in 1804, most of its buildings were allowed to deteriorate. The Corning Glass Company of Corning, New York, felt that the site of this late 18th. century glassworks was worth an archaeological investigation. In 1962-1963, the Corning Museum, the Smithsonian Institution, and Colonial Williamsburg, collaborated to perform the "dig."

## Amelung House and Glassworks

Sites of two glass houses, or glazieries, were found on the north side of Bennett's Creek, about 200 yards down the hill from Amelung House. A third glaziery was found on the southern creek bank.

The archaeologists excavated the foundations of one of the main factory buildings which Paul Perrot, administrative officer of the "dig", called "quite an imposing industrial complex for its age." The building measured 112' 9" by 65'. According to I. Noel Hume, archaeological director, "within (the foundations) were two furnaces for melting glass (one believed to have been for bottles and the other for table glass), nine other evens, storerooms, a wood drying room, and potting rooms." He also said that "the digging has revealed much about the appearance and operation of the one factory building, but nothing is yet known about the workers' houses, the warehouses, schools, stables, mill and other structures which made up the New Bremen community; though all of them are mentioned in the surviving records."<sup>2</sup>

When the excavation work was halted in 1963, three eighteen inch tin-roofed wooden sheds were built over the exposed furnaces ovens, and rock floors to protect them from the weather.

Pamela James July 21, 1972 from notes and other material in the MHT files.

#### STATEMENT OF SIGNIFICANCE

F-54 and F-371

In August 1784, Johann Friedrich Amelung of Bremen, Germany, arrived in Baltimore after a three month voyage from Europe. Accompanying him were 68 workers and enough glassmaking equipment to establish a good-sized factory. His agent and fourteen other workers arrived in November of the same year. Twenty-one-hundred acres of wooded land were purchased in Frederick County for the construction of the glassworks and a village which was named New Bremen. On February 11, 1785, Amelung announced in the Maryland Journal and Baltimore Advertiser that "a company of German manufacturers have arrived and will establish a factory."

The 1780's was an auspicious time in which to attempt the establishment of a glass manufactory in the United States. The young country still had very few factories of any kind, a state of affairs many Europeans wanted to perpetuate. The English and the Germans, in particular, tried to keep their knowledge of glassmaking processes from crossing the ocean, and it is possible that Amelung experienced some difficulty in recruiting German workers for his Maryland venture.<sup>2</sup> Later, after his manufactory was operating at New Bremen, Amelung was a strong supporter of home industry and one of the first Americans to express the need for a protective tariff to keep these industries from failing because of the competition from lower-priced imported products.<sup>3</sup>

The New Bremen Glass Manufactory opened in 1785 and began to produce glass which was at one time valued at \$10,000 per year.<sup>4</sup> The <u>Maryland Journal</u> published the following advertisement of its wares on May 22, 1789:

'The American Glass Manufactory at New Bremen.--The subscriber having completed his glass manufactory near Frederick Town, State of Maryland, on an extensive plan is now able to furnish glass, not only sufficient for the consumption

of this State, but also in great part for the neighboring States. He makes window glass transparent and substantial equal to the London crown; an inferior quality equal to the Bristol crown; all kinds of flint glass, such as decanters and wine glasses; tumblers of all sizes and any other sort of table glass. He also cuts devices, cyphers, coats of arms and any other fancy figures on glass, and in a short time hopes to be able to furnish looking glasses of all sizes. He takes this opportunity of returning his hearty and sincere thanks to a patriotic public for the encouragement he has received in giving a preference to the American manufactured glass and hopes by due attention to merit a continuance of their favor.'

This advertisement continued to tell of a warehouse in Frederick where New Bremen glass is sold and mentions that it can also be bought from "Messrs." Thomas ans Samuel Hollingsworth, Merchants, Baltimore."<sup>5</sup> At one time, Amelung also had agents in New York and two different agents in Baltimore, but New Bremen's prosperity was short-lived and in 1788, Amelung applied to the State of Maryland for a loan, saying that "he had brought glass manufacturing to perfection, but had spent \$20,000 in the process."<sup>6</sup> The State granted him a loan of \$1,000 and tax exemption for a five-year period. In May of 1790, he went to New York to petition the U.S. Congress for a loan to help stave off bankruptcy. Although his neighbor, Charles Carroll of Carrollton, supported his request, and another man stated that "the New Bremen product was the best ever produced in America, " Amelung's request was denied.<sup>7</sup>

Amelung mortgaged part of his property in 1793 and part in 1794. In spite of these attempts at saving the industry, the bankruptcy of the owners placed New Bremen on the market in 1795. The Glassworks were not sold in spite of a notice beginning "A bargain! A bargain!" which was printed a dozen times in the March issues of the Federal Intelligencer and <u>Baltimore Daily Gazette</u>.<sup>8</sup> The property was finally sold in 1804 at a bankrupt sale.

In spite of its end, the New Bremen Glass Manufactory has an excellent twentieth-century reputation, clearly illustrated by the following excerpts from Press Releases issued by the Corning Museum of Glass, Corning, New York, during their archaeological explorations of the factory site:
