Describe the present and original (if known) physical appearance

Situated on a narrow street adjacent to structures of similar scale, the Providence Telephone Company Building stands in the middle of Providence's densely built central business district. The facade of this five-story, masonry and steel building is the only portion publicly visible, and, because of its mid-block location, the building visually is planar rather than spatial. The brick-and-terra-cotta facade is divided in A-b-A-b-A fashion into three major and two minor bays. As originally constructed in 1893, the building rose three stories from the street; in 1906, the two upper stories were added.

The first floor of the facade is of rusticated Indiana limestone. The base has three major tripartite entrance bays and two minor bays. The central entrance is flanked by Ionic columns; the two side entrances, by slender Corinthian columns--none is fluted. The minor bays, flanking the central entrance, have simple round-head openings. The whole first level is capped by a dentil cornice and a wide, flat frieze bearing the legend "TELEPHONE BUILDING."

The same bay system obtains on the second, third, and fourth stories. Windows in the major bays are grouped in threes or fours; those in minor bays are single. The surface of the second story is brick, but rusticated like the first story. A wide and elaborate frieze of grotesquework separates the second and third stories. Colossal Composite engaged columns set on pedestals with grotesque-ornamented dadoes and a full Composite entablature--its frieze ornamented with grotesquework--frame the third and fourth stories, whose brick wall surface is banded with bead-and-reel molding; cartouches cap the windows of the minor bays.

The fifth floor is more simply handled. A blind balustrade caps the Composite cornice. The three major bays have two sash windows each, and the two minor bays have a single window each. Grotesquework pilasters define the bays. A simple parapet caps the building, broken only by segmental arches over the minor bays.

Interior finish is simple. The first floor lobby, at the center of the building, features a marble floor, an open staircase with decorative iron rail, wood-paneled walls, and a structural column finished as an Ionic column, supporting a steel beam sheathed as a full entablature. Much of the original flooring and many of the ceiling cornices and Corinthian column capitals were sheathed during the renovation of the structure in the 1960s, but these have been revealed and restored in a recent rehabilitation. On the second floor, a fireplace mantel in the northeast section of the building features fluted Corinthian columns supporting a carved frieze and modillioned shelf.

Specific dates 1893, 1906 **Builder/Architect** Stone, Carpenter & Willson, Architects, of Providence

Statement of Significance (in one paragraph)

The Providence Telephone Company Building is a well-preserved turn-of-the-century office building, significant historically as a symbol of the early prosperity and remarkable expansion of the Providence Telephone Company and architecturally as an early and important commercial example in the late nineteenth-century classicizing mode.

The Providence Telephone Company was organized and incorporated in 1880 under the leadership of former Governor Henry Howard, who served as president until 1892. That same year, the City of Providence granted the company a franchise for an underground conduit system, and the subsequent rapid increase in the number of subscribers necessitated new switchboard facilities. The Telephone Company applied for an Intention-to-Build Permit on 28 June 1892, and construction on this building continued into 1893. Upon completion, the three-story building provided a telephone station in the lobby--with booths fitted for both long-distance and local use--offices for the directors on the second floor, and operating rooms on the third floor. The company grew rapidly, and the building was expanded vertically to five floors to accommodate the expanded service. Within ten years, however, the building was again cramped and unable to expand further in this location; consequently, the company moved to headquarters in a new building at 234 Washington Street in 1917.

Designed by Stone, Carpenter & Willson, the leading Providence architectural firm at the time, the Telephone Company Building is an important building in the transition from the somewhat fussy, "eclectic" buildings of the 1880s to the smooth classicism of the 1890s and after. This is the first of a long series of commercial buildings based on Renaissance-inspired examples. The firm's first shift toward a refined, intricately ornamented Renaissance classicism was informed by the New York work of McKim, Mead & White--particularly their Century Association (1891) or Judson Memorial Church (1892)--and particularly the rather flamboyant designs of Stanford White executed in terra-cotta. Both the rhythm of the facade's bay system and the highly manipulated surface recall the embellished, mid-sixteenth-century architecture of Northern Italy--and particularly the Veneto--that provided ultimate inspiration for much of the work of both McKim, Mead & White and Stone, Carpenter & Willson during the 1890s. The building was well received upon its completion, and an illustration was published in the American Architect and Building News on 16 September 1893. Immediate successors stylistically to the Telephone Company Building include the Lauderdale and Francis Buildings (1894),

Old Stone Bank (1898), and the Providence Public Library (1900), all by Stone, Carpenter & Willson. The addition of the top two stories in 1906 involved a considerable reworking of the 1893 design, but the final solution is consistent within itself.
