National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

1. Name of Property

historic name Bear Island Light Station

Describe present and historic physical appearance.

Sited above a bold rock ledge, Bear Island Light Station is composed of a squat tower with an attached workroom; a detached, frame gambrel roofed keeper's house; a barn; a diminutive stone oil house; and a boathouse. Now part of Acadia National Park, this light station no longer serves as an aid to navigation.

1. LIGHT TOWER - CONTRIBUTING STRUCTURE

The light tower is constructed of brick and has a slightly tapered configuration. A pair of small window openings in the shaft provide interior illumination. Its polygonal lantern, which no longer shelters a beacon, is framed by a relatively wide circular parapet that is supported by iron brackets and bordered by a railing. The attached ancillary brick building has a single window on both side walls and a door in the gable end. This tower and workroom date to 1889 when the entire station was rebuilt.

2. KEEPER'S HOUSE - CONTRIBUTING BUILDING

A short distance to the northeast of the tower is the one-and-a-half-story keeper's quarters. The rectangular dwelling is sheathed in clapboards and wood shingles in the gambrel ends. Its three-bay front elevation is symmetrically composed with a central door flanked by window openings (since boarded over). Two small dormers punctuate the roof and a pair of brick flues rise through the ridge. There are four windows on both ends; two on each story. A small shed roofed addition with three windows and a door is attached to the rear. Above it is another dormer. The present dwelling replaces the original one-and-a-half-story stone building and its low one-story frame ell.

3. BARN - CONTRIBUTING BUILDING

Some distance to the northeast of the tower and the house is the rectangular frame barn. It has a pair of windows on its east gable end and a door on the south elevation.

4. OIL HOUSE - CONTRIBUTING BUILDING

The small stone oil house is located to the southwest of the barn. It was constructed in 1905 and has a typical twentieth century configuration with its vent and door located in one gable end.

5. BOATHOUSE - CONTRIBUTING BUILDING

Standing to the northwest of the tower is the boathouse and slip. The gable roofed frame building was constructed in 1905. It is sheathed in wood shingles, has a shed addition at the rear, and a replacement paneled door over the slip.

The first complex built at Bear Island in 1839 employed a stone dwelling surmounted by a lantern. In 1852, a brick tower was erected off one end of the dwelling, and in 1889 the entire complex was pulled down and rebuilt. This chronology of construction is an important reminder of the constant historic process of the rebuilding and upgrading of Maine's light stations.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Bear Island Light Station was established in 1839 as a guide to Northeast Harbor on Mount Desert Island. Prominently located at the summit and western end of Bear Island, the station meets registration requirements as set forth in the multiple property submission "Light Stations of Maine". It retains integrity of setting, design, materials, and association evaluated under the historic contexts Maritime Transportation in Maine: ca. 1600-1917 and Federal Lighthouse Management: 1789-1939.

The Bear Island light derives significance under criteria A and C. Criteria A is satisfied by the association of the complex with Maine's critical reliance on maritime transportation and the aids that made navigation possible. Criteria C is met by the station's distinctive character that principally embodies light station design and construction of the 1870s.
