3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1986, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not meet the National Register Criteria. I recommend that this property be considered significant nationally statewide locally. (See continuation sheet for additional comments.)

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B** Property is associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property has yielded, or is likely to yield, information important in prehistory or history.

Areas of Significance

Fleming-Watson Historic District
Marion County, WV

Section Number 7 Page 1

7. Description

The Fleming-Watson Historic District is a primarily residential historic district of 84 acres lying approximately four blocks west of the Monongahela River, southwest of the central business district of the city of Fairmont, in north-central West Virginia. The Fleming-Watson Historic District contains a total of 426 resources, two of which were previously listed in the National Register ("High Gate" and its associated carriage house, both located at 801 Fairmont Avenue; Resource Nos. 122 and 123; NR 4/15/82). These properties are depicted on the District Map and contribute significantly to the character of the district; they appear in the Resource Inventory which accompanies the nomination, but are not included in the numerical tabulation which appears in Section 5 of this document. Of the 424 non-registered resources, 366 (86%) contribute to the character of the district and 58 (14%) are non-contributing. Non-contributing resources include buildings erected outside the c. 1850-1951 Period of Significance of the district as well as properties whose extent of alteration has resulted in a loss of historic architectural integrity and their classification as non-contributing resources. Of the 424 unregistered properties in the district, 423 are buildings and one, the Fourth Street Bridge (Resource No. 342) is a contributing structure. Approximately seventy percent of the properties in the district pre-date 1920, approximately twenty percent were constructed between 1920 and 1951, and the remaining approximately ten percent post-date 1951. In addition to the predominating domestic and very limited commercial architecture of the district, Fairmont's institutional growth and maturity is represented by one church (the Christian Church, 112 Walnut Avenue; Resource No. 1) and one education-related resource, Butcher Public School (which faces Fourth Street but whose address is 420 Albert Court; Resource No. 134).

As noted in the State Historic Preservation Office-sponsored *Survey Report* for the 1996 historic architecture survey of the City, the "predominate building form [in Fairmont] is the single-family residence."¹ This is true for the entirety of the Fleming-Watson Historic District. The architecture of the district varies from modest vernacular residences and a scattering of commercial buildings to "High Gate," the monumental Tudor Revival-style home of coal baron James Edward Watson, located at 801 Fairmont Avenue (Resource No. 122) and the home of C. E. Hutchinson at 701 Benoni Avenue (Resource No. 171). The vast majority of the domestic architecture is of wood construction, the neighborhood commercial architecture is of brick and wood, and both Butcher School and the Christian Church are executed in brick. Larger dependencies are included in the resources count, while smaller outbuildings (sheds, etc.) are treated as low-scale landscape features and are not represented in the count. The district retains integrity in each

Continuation Sheet**

Fleming-Watson Historic District
Marion County, WV

Section Number 7 Page 2

of its seven qualities: location, design, setting, materials, workmanship, feeling, and association.

The Fleming-Watson Historic District consists of two sections, one on either side of the ravine through which Coal Run meanders. The portion of the district southwest of Coal Run was laid out in the 1890s by the Fairmont Real Estate Company and is considerably larger than that section of the district which lies northeast of Coal Run. The southwest section is arranged in a grid and lies northwest of Fairmont Avenue, which in modern times has become one of the city's leading commercial thoroughfares. Moving northwest from Fairmont Avenue and running parallel to Fairmont Avenue are Walnut, Benoni, Coleman, Sylvan, and Mt. Vernon Avenues. Outlook Road follows a curvilinear path near the southwestern edge of the district. Numbered streets intersect these avenues at right angles, beginning with Second Street at the northeast edge of the district, through Ninth Street at the southwest edge. Unnamed alleys run parallel to Fairmont Avenue. The Fourth Street Bridge (Resource No. 342) is a high-level concrete deck structure which spans Coal Run Hollow, which was the site of early Watson family coal mines. On the northwest side of the bridge is the second, smaller section of the Fleming-Watson Historic District, which until 1899 was part of the incorporated town of West Fairmont; this section has Fourth Street and Locust Avenue (originally "Upper Road") as its major thoroughfares. Nuzum Place (alternatively spelled "Nozum" and also referred to as "Gypsy Court" in historic fire insurance maps) intersects Fourth Street immediately west of the bridge, McCoy Street intersects Locust Avenue near the north edge of the district, Green Street forms a portion of the district boundary in the West Fairmont area, and Watson Avenue is roughly parallel to Locust Avenue, also near the district's western edge.

Most streets in the district have rights-of-way of fifty feet; the Walnut Avenue right-of-way is sixty feet in width; alleys are generally twenty-five feet wide. All streets in the district are paved; some historic brick pavement has been retained. Sidewalks--some of brick--are found on both sides of most streets and parking is permitted in nearly all areas of the district. Street lighting throughout the district employs modern fixtures attached to utility poles and powered by overhead lines.

The residential areas of the district are typified by rectangular building lots with regular front, side, and rear lot setbacks. Landscaping includes lawns, both large and small, and streets with mature shade trees. In the small commercial portion of the Fleming-Watson District most buildings occupy their entire lots, with no front or side lot setbacks. Some commercial properties have paved parking areas along the rear of their lots. Butcher Public School (Resource No. 134) sits back from the curb line of Fourth Street and occupies a large lot at the edge of the Coal Run ravine. "High Gate" (801 Fairmont Avenue; Resource No. 122), at the southwestern edge of the district, retains its spacious landscaped historic surroundings and encompasses the entire block bounded by Fairmont and Walnut Avenues and

Continuation Sheet**

Fleming-Watson Historic District
Marion County, WV

Section Number 7 Page 3

Eighth and Ninth Streets.

The buildings in the district are rectilinear in form and generally vary in height between one and one-half and two and one-half stories. "High Gate" is by far the largest residential property in the district. Most residential buildings in the district incorporate gabled and hipped roofs; Dutch Colonial Revival-style properties employ the gambrel roof form which is characteristic of the style. Some more elaborate residences have multiple roof systems, employing both gabled and hipped forms to roof a complex, irregularly-shaped property. Most of the homes retain front porches of varying scales and forms along with associated domestic outbuildings, sheds, and garages. The commercial buildings are flat-roofed or have shed roofs which slope gently from front to back. Butcher Public School has a hipped roof. Some historic chimneys have been retained throughout the district, while others have been removed in the course of retrofitting heating systems and replacing roofs. The majority of the buildings in the district rest on substantial foundations of ashlar sandstone; a smaller proportion of foundations are of brick. Glazed ceramic tile block and concrete block--the latter with smooth-dressed, rock-faced, and rusticated finishes--were employed for the foundations of many buildings built after the beginning of the twentieth century. Due to the late-nineteenth and early-twentieth-century character of much of the district, most buildings are punctuated by tall and narrow patterns of fenestration. Secular art glass has been retained on some of the homes and religious art glass is found on the district's single church.

The architectural styles represented in the Fleming-Watson Historic District include most of the design modes popular during the district's century-long Period of Significance. These include the Italianate, Queen Anne, Colonial Revival, Tudor Revival, American Foursquare, Cape Cor, International, and Bungalow styles, along with vernacular adaptations of each. This diversity of design contributes significantly to the broad-based architectural character of the district as a whole. The characterization of the citywide housing stock in the aforementioned *Survey Report* applies as well to the Fleming-Watson Historic District, in that "the diversity in the vernacular housing is as great as the styles influencing them. Homes range from the smaller houses generally built at a lower cost to the grand homes in high styles."²

Italianate-style design in the Fairmont-Watson Historic District includes the commercial building at 401-403 Walnut Avenue (Resource No. 32), the c. 1883 James Steele House (Resource No. 371) at 200 Avenue, and the Eugenius Boydston House at 205 Locust Avenue (Resource No. 372), a transitional Greek Revival-Italianate residence of wood construction.

Section Number 7 Page 4

The Queen Anne style, with its multiplicity of wall textures, irregular roof line, and characteristic tower and/or turret, is seen in the properties at 206 Walnut Avenue, 600-602 Benoni Avenue, 828 Fourth Street, and 336 Locust Avenue (Resource Nos. 2, 156, 355, and 392, respectively).

The Romanesque Revival style, employing round-arched openings and often a tower (symmetrically located or offset on the facade), was used in the district for institutional design and appears on the district's two examples of institutional architecture, the 1890s Butcher School (Resource No. 134) and the 1915 Christian Church (Resource No. 1).

Colonial Revival-style architecture, incorporating detailing and massing from the pre-revolutionary period (including features such as Palladian windows) includes the residences at 311, 312, 511, and 721 Walnut Avenue (Resource Nos. 20, 22, 59, and 102, respectively), 508, 639, 707, 727, and 803 Benoni (Nos. 142, 170, 175, 183, and 189), 711, 721, and 726 Coleman Avenue (Nos. 218, 224, and 232), 706, 725, and 727 Mt. Vernon Avenue (Nos. 263, 273, and 275), 12 Outlook Road (No. 285), 709 and 814 Eighth Street (Nos. 302 and 308), 609 Seventh Street (No. 320), 828 and 901 Fourth Street (Nos. 355 and 360), 225 Locust Avenue (No. 383), and 216 Watson Avenue (No. 407).

The Dutch Colonial Revival, with its characteristic gambrel roof, appears in the homes at 510 and 701 Benoni Avenue (Nos. 144 and 171), 722 Coleman Avenue (No. 226), 700 Mt. Vernon Avenue (No. 258), 22 Outlook Road (No. 291), and 201 and 213 Watson Avenue (No. 403 and 406).

Tudor Revival-style domestic architecture was popular in the Fleming-Watson district during the early decades of the twentieth century. This mode of domestic design appears in masonry and wood and incorporates a partial exterior surface treatment executed in half-timbering. Tudor Revival-style homes include "High Gate" (Resource No. 122) and 728 Mt. Vernon Avenue (No. 276).

The Neo-Classical Revival style was employed in Fairmont for substantial, formally-designed homes of large scale. Within the district, this style is represented in the properties at 225 and 322 Locust Avenue (Resource Nos. 383 and 391) and 205 Watson Avenue (No. 404).

The ubiquitous American Foursquare, more of a house type than a formal architectural style, is essentially square in plan and usually incorporates a dormered hipped roof and a hipped-roof front porch. Examples of this style appear

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

Fleming-Watson Historic District
Marion County, WV

Section Number 7 Page 5

on most of the residential streets in the district and are executed both in masonry and in wood, in some cases with a first story of masonry and a second story of wood. Representative examples of the American Foursquare include the properties at 507, 529, 606, 612, 710, 717, and 727 Walnut Avenue (Resource Nos. 55, 69, 76, 82, 94, 98, and 108), 702, 709, 726, and 827 Benoni Avenue (Nos. 172, 177, 182, and 202), 807 Coleman Avenue (No. 239) and 602 Seventh Street (No. 316). Also represented in the district are 1½-story homes executed in the Cape Cod style (728 Walnut Street, 708 Mt. Vernon Avenue, and 4 Outlook Road; Resource Nos. 110, 266, and 282, respectively) and a single-story stucco-finished residence in the International style (828 Coleman Avenue (Resource No. 251).

Bungalows became a popular middle-class design choice during the years between 1910 and 1940. One and one-half stories in height, Fleming-Watson Bungalows are gable roofed, with a laterally-oriented roofline and often include a large dormer on the roof and a front porch recessed beneath the slope of the main roof. Within the district, the following properties represent the Bungalow style: 734 Benoni Avenue, 713, 727, and 843 Coleman Avenue, 704 and 712 Mt. Vernon Avenue, 14 and 27 Outlook Road, and 815 Fourth Street (Resource Nos. 188, 220, 233, 254, 261, 267, 286, 294, and 352, respectively).

On Locust and Benoni Avenues are several examples of locally distinctive domestic architecture finished in cobblestone and ranging between one and two stories in height, with gable roofs and a variety of window treatments including double-hung and steel casement sash. These homes are found at 222 and 224 Locust Avenue (Resource Nos. 385 and 387, respectively) and at 734 and 830 Benoni Avenue (Resource Nos. 189 and 206, respectively)

As noted in the introductory paragraph, the Fleming-Watson Historic District retains historic and architectural integrity. The overall character of the district is intact and represents the growth and maturity of this neighborhood throughout its century-long Period of Significance. The physical condition of the properties in the district ranges from excellent to poor. Some demolition has occurred and a limited number of newer homes have been built within the boundaries of the nominated area. Alterations to buildings within the district include the application of non-historic siding³ and the installation of replacement windows along with storefront renovations in the small commercial sector. Some homes reflect the removal of historic porches. These alterations are widely dispersed throughout the district and do not detract significantly from the ability of the nominated area to reflect its appearance throughout the Period of

³The term "non-historic" is used throughout this document and refers to siding materials which were applied after the conclusion of the Period of Significance of the district, 1951 in the case of the Fleming-Watson district. This term is used generically, and can include aluminum and vinyl siding materials as well as perma-stone, but would not include asphalt shingle siding or insul-brick, both of which are historic siding materials which were in vogue during the Period of Significance.

National Park Service**

**National Register of Historic Places
Continuation Sheet**

Fleming-Watson Historic District
Marion County, WV

Section Number 7 Page 6

Significance. This fact notwithstanding, the removal of a historic porch is sufficiently invasive as to render a resource non-contributing. Mitigating the effect of the loss of historic buildings is the fact that most properties have been well maintained and that sensitive residential rehabilitation activity has occurred throughout the district, particularly in the rehabilitation of the C. E. Hutchinson Mansion at 701 Benoni Avenue (Resource No. 171).

Viewed in its entirety, Fairmont's Fleming-Watson Historic District is an architecturally-cohesive residential and commercial area which is situated on a grid of streets in this leading West Virginia coal community/county seat. The nominated area contains over four hundred substantial historic buildings of residential, commercial, and institutional character and retains integrity.

The following properties lie within the Fleming-Watson Historic District. Those properties indicated as "contributing" are assumed to date from within the Period of Significance of the district and retain sufficient physical integrity as to reflect their appearance during their historic past. Properties which are designated "non-contributing" were built outside the Period of Significance and/or reflect alterations so severe that their individual architectural character has been seriously compromised. The dates of construction are generally approximate and are based upon physical examination and upon *City Directories* and *Sanborn Fire Insurance Maps* for the district, all of which are cited in the Bibliography in Section 9 of the nomination documents.

1. 112 WALNUT AVENUE (Christian Church), religious
Description: 2-story Romanesque Revival-style church of brick construction, with a hipped roof and a square tower offset at one corner of the facade; cornerstone identifies the historic name and date of construction; religious art glass
Date: 1915
1 contributing building

2. 206 WALNUT AVENUE, residential
Description: 2-story Queen Anne vernacular residence of wood construction, set on a foundation of stone with an intersecting gable roof; intersecting gable roof of standing-seam metal; unusually elaborate nineteenth-century turned and sawn trim
Date: c.1880

Section Number 8 Page 1

8. Significance

The Fleming-Watson Historic District is significant under National Register Criterion A for *community planning and development* and under Criterion C for *architecture*. Evaluating the fabric of the district under Criterion C, the district's more than four hundred buildings represent the range of architectural design popular during the Period of Significance, which begins c. 1850 (the approximate date of construction of the district's earliest extant building, the Eugenius Boydston House at 205 Locust Avenue [Resource No. 372]) and ends in 1951, corresponding both to the 50-year guideline for National Register eligibility and to the approximate date of construction of the latest of the district's historic resources.

The district contains locally-distinctive examples of many of the styles of architecture popular from the mid-nineteenth through the mid-twentieth century. Among these styles are late interpretations of the Greek Revival, along with Italianate, Queen Anne, Neo-Classical Revival, Colonial Revival, Tudor Revival, Bungalow, American Foursquare, and vernacular adaptations of many of the individual design modes. Throughout the district are examples of purely vernacular architecture, which, although executed without reference to formal design tenets, nonetheless represent the significant manifestation of local building traditions in Fairmont and Marion County. Specific examples of the styles employed within the district appear in Section 7 of this narrative. With additional reference to Criterion C, the district contains the work of nationally- and regionally-prominent architects such as Philadelphian Horace Trumbauer and local architects A. C. Lyons and George Giffon.

The preparation of this nomination was a recommendation from the 1996 survey of the City which was conducted by the West Virginia State Historic Preservation Office. The Fleming-Watson Historic District clearly retains the integrity necessary to reflect its physical appearance during its century-long Period of Significance.

The earliest development of the area of then Virginia which became Fairmont began late in the eighteenth

Section Number 8 Page 2

century with subsistence-level farming settlements.⁴ Revolutionary War veteran Boaz Fleming (1758-1830) migrated here in 1789 and acquired a 254-acre tract from Jonathan Bozarth. Beginning in 1818, Fleming (from whose family the Fleming-Watson neighborhood draws its name) subdivided a portion of his farm into town lots. A state road between Clarksburg and Morgantown was opened in 1819 and the following year the town was formally incorporated by the Virginia General Assembly; it was christened "Middletown" because of its location halfway between Clarksburg and Morgantown.⁵ Middletown attained additional regional importance in 1842 when it was designated the seat of government of the newly-formed Marion County, which was named in honor of the "Swamp Fox," Gen. Francis Marion, of Revolutionary War fame. The new county was erected from portions of Monongalia and Harrison Counties; the following year the general assembly re-named the community "Fairmont," derived from the contraction of "fair" and "mountain." By this time, the seventy homes in the community were served by five stores and assorted hotels and taverns. The area of the Fleming-Watson Historic district remained undeveloped throughout the first half-century of the city's developmental history.

Fairmont's subsequent growth was enhanced by contributions of several nineteenth-century community, business, and industrial leaders, including James Otis Watson (1815-1902), long recognized as the "Father of the West Virginia Coal Industry," but whose industrial influence extended considerably west of the Alleghenies, and Francis H. Pierpont (1814-1899), acknowledged as the "Father of West Virginia." Both Watson and Pierpont developed lands in the Fairmont environs which would be stimulated by the emergence of the region's mammoth and dominating coal industry.

In 1852 the Baltimore and Ohio Railroad arrived in Fairmont, hastening significantly the development of the settlement. Not only did the railroad open the markets to and from the community, but it also brought waves of immigrant railroad laborers and their families who helped construct the line and populate the community. The coal

⁴Much of the information dealing with the history of the area was taken from the National Register of Historic Places Registration Form for the Downtown Fairmont Historic District; its full citation appears in the Bibliography located in Section 9 of this document.

⁵An alternative theory suggests that the name was taken from the Delaware community from whence hailed Boaz Fleming's wife, Elizabeth Hutchinson.

shipped from the Fairmont mines was reputed to have been the first such material transported by railroad west of the Allegheny Mountains.

With respect to National Register Criterion A, the Fleming-Watson Historic District is significant for its reflection of the patterns of community planning and development in Fairmont during the latter years of the nineteenth century and the first decades of the twentieth century. The maturity of the systems of water transportation on the Monongahela River and rail transportation through the B & O, coupled with a growing labor force and Fairmont's proximity to large regional markets, encouraged the community's entrance into the most significant phase of its development. The years between 1890 and 1930, a period which parallels the significant development of the Fleming-Watson Historic District, marked Fairmont's most significant growth era. The ascendancy of coal mining and natural gas production created for "the Coal City" the image of prosperity and significant growth. Much of the capital investment responsible for this was generated by local barons, such as James Otis Watson, A. B. Fleming (Governor of West Virginia and son-in-law of J. O. Watson), and the three Watson sons, James Edwin (the builder of "High Gate" [Resource No.122] who established the Montana Coal and Coke Company), Sylvanus Lamb, and Clarence, who became a U. S. Senator and in 1901 organized the Fairmont Coal Company. Others of local coal fame were Clyde C. and M. L. Hutchinson, John A. Clark, and the Jamison family. The Watsons remained leaders in the industry following the 1903 acquisition of Fairmont Coal by the Consolidation Coal Company. Homes of both the Watson and Hutchinson families are found in the Fleming-Watson Historic District.

In addition to the Watsons and Hutchinsons, other leading Fairmont community leaders made their homes in the new neighborhood. Among these are Sam R. Nuzum, a real estate speculator and president of the Fairmont Investment Company, which purchased many lots in the neighborhood and resold them for development. He was also president of the Nuzum Sand Company, of the Nuzum Realty and Security Company, and of the Marsh Coal and Coke Company. His spacious c. 1900 Neo-Classical Revival-style home (Resource No. 391) is located at 322 Locust Avenue. Carroll Helmick, president of the Helmick Foundry and Machine Company, built a distinctive stone cottage at 700 Ninth Street (Resource No. 206) late in the 1920s. At about the same time, Chester C. Shinn, sales manager for the Consolidated Coal Company, erected a Colonial Revival-style home at 609 Seventh Street (Resource No. 320).

Section Number 8 Page 4

Viewing the Fleming-Watson Historic District as the manifestation of community development and planning patterns, the nominated area was laid out in a regular system of building lots in the last decades of the nineteenth century. Much of the district was owned by the Fairmont Real Estate Company and the eastern section of the district is referred to as the "Fairmont Real Estate Company Addition" on early *Sanborn Fire Insurance Maps*. Streets and alleys were platted and given both traditional names (including native tree names such as Locust and Walnut as well as numbered designations) and names memorializing local families such as the Watsons, the Flemings (Governor A. B. Fleming was James Otis Watson's son-in-law), and their ancestors and progeny, including Benoni (the older brother of pioneer Boaz Fleming), Alfred (Benoni's eldest son), Sylvanus Watson (one of James Otis Watson's sons), and Coleman Fleming. Streets were also named for community leaders such as real estate developer Sam R. Nuzum and prosecuting attorney John W. McCoy, both of whom lived on Locust Avenue in the district (Resource Nos. 391 and 372, respectively). The area of the district which includes Locust Avenue was initially incorporated as West Fairmont; it remained a separate municipality until 1899, when, along with the Town of Fairmont and Palatine (across the Monongahela River east of downtown Fairmont), it was incorporated into the newly formed City of Fairmont. The Fairmont Real Estate Company Addition remained sufficiently undeveloped early in the twentieth century that it was not included on *Sanborn Fire Insurance Maps* until 1902.

The Fairmont Real Estate Company and the Fairmont Investment Company, along with the Fairmont Development Company--headed by J. E. Watson--were all key participants in the development of much of the district and both bought and sold building lots within the nominated area. These development companies were sufficiently capitalized to be able to provide their purchasers with financing, thereby assuring the growth of the new neighborhoods--and the purchase of additional building lots. A typical transaction is that which was recorded in 1901, when one Grace Davis purchased Lot 15 of Block 38, on Benoni Avenue, for a total of \$800.00. She made an initial payment of \$200.00 to the Fairmont Investment Company and agreed for the next two years to make annual payments of \$200.00 until her debt was satisfied.

Fairmont's dramatic growth throughout the Period of Significance of the Fleming-Watson Historic District reflected the community's solid emergence as a regional transportation, mercantile, and banking center associated with

all of north-central West Virginia. The famed "Fairmont [coal] Field" contained Marion County as well as the counties of Barbour, Harrison, Monongalia, Preston, and Taylor. Bituminous coal shipped from the area rose from approximately a quarter million tons in 1890 to twenty-one million tons by 1920. Profits from the industry thus fueled the growth of diversified industries, including electric utilities and metal and chemical plants. The profits fueled the growth of the Fleming-Watson neighborhood as well, and these same years mark the most active growth years of the neighborhood. Despite industrial decline during the Depression years, the city rebounded during the Second World War with the production of military and defense-related materials. The Fleming-Watson Historic District retains a significant portion of its late nineteenth- and early twentieth-century architecture and the streetscapes and individual resources of the district clearly reflect the planned growth of the community throughout the c.1850-1951 Period of Significance.

With respect to National Register Criterion C, the Fleming-Watson Historic District contains a variety of locally- and regionally-distinctive examples of many of the architectural styles which were in vogue during the Period of Significance of the district. In addition, the work of nationally- and regionally architects is found within the nominated area.

The earliest architecture in the district represents the waning of the Greek Revival and Italianate styles and the ascendancy of the Queen Anne mode, incorporating tall, narrow patterns of fenestration and overhanging cornices of wood. The immediate successors to these styles include both the Neo-Classical Revival and the Colonial Revival styles, which occurred simultaneously from the late 1890s through the 1920s. Neo-Classical Revival style buildings incorporate design elements from classical antiquity, including porticos, the use of columns and pilasters, and formal, typically symmetrical, plans. Colonial Revival buildings draw upon design tenets from the pre-Revolutionary period in American architectural history, and often incorporate Renaissance motifs, Palladian windows, etc. Vernacular adaptations of the Colonial Revival style often exhibit only a Palladian window or a modified version thereof. Later design modes within the district include the American Foursquare—consistently seen as nearly square homes with hipped or pyramidal roofs usually with dormers, a two- or three-bay facade, flat-topped windows, and a full front porch extending across the facade. Bungalows became popular concomitantly with the Foursquare, and are seen in the district with one and one-half-story plans, laterally-oriented gable roofs which extend beyond the plane of the facade and shield a recessed front

National Park Service**

**National Register of Historic Places
Continuation Sheet**

Fleming-Watson Historic District
Marion County, WV

Section Number 8 Page 6

porch, and often a dormer. The few Tudor Revival style residences are finished in a half-timbered stuccoed surface which harkens back to Medieval-era design, one International-style building is of one story and finished in bright white stucco, and Cape Cod houses are of one and one-half stories in height, with laterally oriented gable roofs, symmetrical facade and dormers.. In addition to the formal use of these styles, many properties in the district include some reference to formal styles, but are more accurately described as being vernacular derivations of many of the styles. Beyond these, within the nominated area are also a number of locally-distinctive cobblestone residences whose design represents an important local building tradition.

The formally-derived architecture of the Fleming-Watson Historic District occurs concomitantly with vernacular local building traditions executed by unidentified carpenters and builders. These buildings are co-equal in importance with the more elite-styled architecture which characterizes much of the district.

Additional Criterion C significance for the Fleming-Watson Historic District is derived from the district's association with several prominent architects. Fairmont architect George Giffon was responsible for the design of the 1890s Butcher School (Resource No. 134). Horace Trumbauer of Philadelphia (1869-1938) was commissioned by James Edwin Watson to design "High Gate," a baronial Tudor Revival-style mansion at 801 Fairmont Avenue (Resource No. 122; NR 4/15/82). Trumbauer also designed the 1909-1911 Watson Building in downtown Fairmont, the headquarters of the family's coal and banking interests. He was a prolific, self-trained designer whose work includes an impressive variety of institutional properties throughout the Philadelphia area, seventeen buildings at Duke University at Durham, North Carolina, and, as recorded by Henry and Elsie Withey in their **Biographical Dictionary of American Architects (Deceased)**, "many distinguished private residences."⁶ "High Gate" clearly ranks among Trumbauer's distinguished commissions.

While the work of Giffon and Trumbauer was clearly significant to the architectural heritage of the district, the district derives additional significance from its association with Fairmont architect Andrew C. Lyons, who was a prolific

⁶Withey, Henry F., A. I. A. and Withey, Elsie Rathburn **Biographical Dictionary of American Architects (Deceased)** (Los Angeles: Hennessey & Ingalls, Inc., 1970), p. 608.

local practitioner who was active in the community during the early years of the twentieth century. Lyons' career began in 1888 in Pittsburgh when he associated with the office of one S. Munsch, an established designer practicing at the opposite end of the Monongahela River from Fairmont. Lyons moved to Fairmont in 1891 and

was successful during his first years' practice in Fairmont in securing good portion of the work there, including the residence of Mr. J. E. Watson, at that time the finest home in the town.⁷

In 1894, Lyons entered partnership with architect Munsch, his former mentor, and remained associated with the elder practitioner until the latter's death, maintaining offices both in Fairmont and Pittsburgh. Lyons also opened a branch of his own practice in Elkins, West Virginia, in 1904. Among Lyons' work are a variety of buildings for the leading citizens of Fairmont, including a residence and four business blocks for Marion County Clerk George M. Jacobs, a dormitory for the Fairmont State Normal School, the aforementioned J. E. Watson House, banks, school houses, and the imposing adjacent turn-of-the-century residences of C. E. Hutchinson at 701 Benoni Avenue (Resource No. 171) and T. W. Arnett at 707 Benoni Avenue (Resource No. 175).⁸

Summary:

Viewed in the context of the community, the Fleming-Watson Historic District can be compared and contrasted with Fairmont's Downtown Historic District, the city's other National Register historic district. Culturally, the downtown district and the Fleming-Watson district both reflect the rise of the coal industry in West Virginia in the early twentieth century. However, the physical characteristics of the district are vastly different. The scale of the buildings in the downtown is significantly larger than is found in the Fleming-Watson district, the downtown is primarily commercial and institutional, while Fleming-Watson is primarily residential in character, and the majority of the downtown buildings are of masonry, while most of the Fleming-Watson resources are of wood construction. The Fleming-Watson district is clearly a significant representative of the pattern in community growth which was born of the coal boom in the region, particularly with reference to the presence in the district of Consolidation Coal's Watson

family. The district retains its historic architectural integrity and contains examples of many of the styles of design which were popular during its century-long Period of Significance.

Section Number 10 Page 3

JUSTIFICATION

The boundaries of this nomination consist of the residential neighborhood traditionally known as the Fleming-Watson area, including homes built during the c. 1850-1951 Period of Significance, along with two secular and religious institutional buildings and a small proportion of neighborhood commercial building. The boundaries were selected as the result of a site visit on November 30, 2000 attended by West Virginia State Historic Preservation Office Survey and National Register Coordinator Katherine M. Jourdan, National Register/Survey Historian Alan R. Rowe, Fairmont City Planner Jay Rogers, Kirk Morphew, M. Arch., the chairman of the Historic Landmarks Commission, and David L. Taylor, of Taylor & Taylor Associates, Inc., who served as the principal-in-charge for the project and prepared the nomination. The boundaries incorporate residential, commercial, and institutional properties which reflect the growth and prosperity of this section of the City of Fairmont and Fairmont's domestic and institutional maturity in late nineteenth and early twentieth century development in northern West Virginia. The boundaries were drawn to exclude most of Fairmont Avenue, which, while historically associated with the Fleming-Watson neighborhood, has been irretrievably compromised by physical alterations to individual buildings and unbridled new construction.

Late in the nineteenth century, Fairmont architect Andrew W. Lyons designed this substantial home (Resource No.175) for T. W. Arnett . It is typical of the high-style residence found in many areas of the Fleming-Watson Historic District [from *Ohio Architect and Builder*, June, 1906)

The C. E. Hutchinson House (Resource No. 171) stands adjacent to the Arnett House, above, and is also the work of architect Lyons. One of the finest properties in the district it recently underwent a major sensitive exterior restoration. [from *Ohio Architect and Builder*, June, 1906)
