Describe present and historic physical appearance.

Summary

This isolated historic lookout tree is located on Tater Ridge on the eastern flank of the Kaibab Plateau on the North Kaibab Ranger District, Kaibab National Forest. It is within the open Ponderosa pine forest at an elevation of 8,000 feet. The tree is still alive. The site retains sufficient integrity to qualify for National Register listing.

Physical Description

This lookout tree is ponderosa pine 100 feet tall and 3 feet in diameter with a ladder constructed up its northeast side. The 70 foot tall ladder begins 3 feet above the ground and has eight sections, all intact. The construction is typical of other ladders on lookout trees: 2" X 4" lumber sidepieces with 1" x 12" crosspieces. The ladder is attached to the tree with spikes.

Setting

Vegetation surrounding the site currently consists of mature Ponderosa pine with some grasses and forbs. The surrounding area has been previously logged and the entire area is heavily littered with duff and downed vegetation. However, the setting retains much of its historic appearance.

Integrity

The Tater Point Lookout Tree is still in good condition, despite having been abandoned for approximately 30 years. It is still readily identifiable as a lookout tree facility and retains integrity of location, design, workmanship, feeling, materials, setting, and association.

8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties:

nationally statewide locally

Applicable National Register Criteria A B C D

Criteria Considerations (Exceptions) A B C D E F G

Areas of Significance (enter categories from instructions) Period of Significance Significant Dates

Conservation		
Politics/Government	ca. 1905-1940	
	Cultural Affiliation	
	N/A	

Significant Person	Architect/Affiliation

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Summary

Tater Point Lookout Tree is significant under Criterion A [36 CFR 60.6] for its association with 1) the development of forest fire prevention, detection, and control by the USDA Forest Service between 1905 and 1940, and 2) the conservation movement and its influence on public land management from 1905 to 1940. It is also significant under Criterion C [36 CFR 60.6] because it embodies the distinctive characteristics of a type of construction, the earliest and simplest form of fire detection structure, built into a living tree.

Historic Contexts/Background

The construction and abandonment dates for the Tater Point Lookout Tree are presently unknown. They might be ascertained, however, through oral history.

Although much remains to be learned about the history of this lookout tree, it had an important function in the earliest fire detection network on the Kaibab National Forest. It continues to evoke a sense of the past.

9. Major Bibliographical References

See continuation sheet.

Previous documentation on file (NPS):

- preliminary determination of individual listing (36 CFR 67) has been requested.
- previously listed in the National Register
- previously determined eligible by the National Register
- designated a National Historic Landmark
- recorded by Historic American Buildings Survey # _____
- recorded by Historic American Engineering Record # _____
