DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The <u>David Luckert House</u> is a square, stone bearing wall building with a small frame rear dependency. Constructed of locally quarried limestone, the building is simply detailed with large stone lintels and sills, random ashlar coursing, and an unadorned cornice line. The house is topped by a hipped roof with four flanking chimneys. There is one small chimney at the rear dependency.

The front elevation is symmetrically organized with fenestration evenly spaced across the facade. The four windows to each side are also evenly distributed, stacked in columns of two each. Of special note is the original four-over-four window sash at all window locations. The only change to the exterior is at the front porch which has been recently enclosed with materials unsympathetic to the original exterior.

The house is well maintained by its owner and appears to be in remarkably good structural condition. Its future, however, is threatened for it is located within an area which is undergoing heavy clearance activity by the local renewal agency.
