National Register of Historic Places
Registration Form

599

This form is for use in nominating or requesting determination for individual properties and districts. See instruction in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Buckeye School

Buckeye School
Larimer County/ Colorado

Section number 7 Page 1
Rural School Buildings in Colorado MPS

DESCRIPTION AND ALTERATIONS

Located in the northeastern part of Larimer County, the Buckeye School is approximately 15 miles northwest of Wellington and 12 miles south of the Wyoming border. The rural school building is surrounded by agricultural fields with large evergreen and deciduous trees immediately around the school yard. The baseball field/parking lot sits north of the building, with a gravel driveway providing access to County Road 80. A few farming properties can be seen in various directions while the Rocky Mountains provide a scenic backdrop to the west.

The original playground equipment is still in the schoolyard to the south, including a slide, teeter totter, merry-go-round, and swing set, as well as the original flag pole. A chain link fence encloses the 1980s swing set, which sits between the school and the historic playground equipment. A baseball field with a chain-link backstop is located north of the building. Along with the school, a small stable and two privies were constructed. The privies originally stood north of the school but were later moved to a field south of the playground equipment. They sat side by side, one for girls and the other for boys, but were removed years after the addition of plumbing to the school circa 1944. The stable was removed at an unknown date.

Buckeye School follows the predominant rectangular floor-plan of the time, though it is a somewhat modified rectangular plan. The one-story building with exposed concrete foundation is covered with an asphalt shingle side gabled roof and horizontal wood siding. Brick chimneys project from the roof ridgeline at the west and east ends of the roof. Historically, the south elevation was the main façade with the students entering the building through the projecting front gabled entries at the west and east ends. The five-panel wood doors are accessed via concrete steps. The south wall between the gabled entries consists of the original four sets of triple 2/2 wood frame windows, which amounts to six windows for each classroom. Screens were installed over the glass for protection from hail storms. Centered directly below each set of windows at the basement level are paired 1/1 wood frame windows.

The west wall consists of two 2/2 wood frame windows, a small vent at the apex of the gable, two covered windows, and two covered openings at the basement level. These covered openings once provided access to the coal and wood storage rooms.

The north wall, originally the rear but now used as the main entrance into the building, contains a projecting front gabled section. Small paired windows on either side of the gabled projection directly under the eaves provided light but are now boarded over. The five-panel wood door on the east side of the gabled section accesses the interior and was the teacher's entrance, off limits to students. Paired 1/1 windows also flank the gabled projection at the basement level. Two 2/2 wood frame windows on the north wall of the projection provide some light to the stairwell.

The east wall is almost identical to the west wall with two 2/2 wood frame windows at the main level, two paired 1/1 basement windows, and two chutes at the basement level; though it is unclear what these openings were for as they lead into the kitchen.

Interior

Just inside each of the south entry doors are small vestibules or cloakrooms where the students would hang up their coats and store their lunch pails. These areas still have the original wood wainscoting, storage cabinets, and coat hooks; 2/2 windows provide light into the cloakrooms. Doors at either end of the vestibules lead into the classrooms. Large built-in floor-to-ceiling bookcases with cabinets stand between the two doors from the cloakrooms (see photos 13 & 14).

With the doors and windows on the south wall, the teacher's desk and the blackboards were on the north wall, thus allowing the teacher to keep an eye on the coming and goings of the students. This also allowed for light to shine into the classrooms behind the students so as not to blind them when looking at the blackboard. One blackboard still hangs in the west classroom while the other is in the basement storage space. The two classrooms were once divided by a movable, wooden, folding partition with a door at each end, separating the younger, lower grade students from the older, upper grade students. Use of the partition only occurred when enrollment warranted the need for two rooms.

**National Register of Historic Places
Continuation Sheet****United States Department of the Interior
National Park Service**Buckeye School
Larimer County/ ColoradoSection number 7 Page 4
Rural School Buildings in Colorado MPS

A portion of the partition was pushed upward into the attic space above the door frame when remodeling occurred (dropped ceiling). Though the partition is no longer in place, it is possible that some folding wood panels recently discovered in the storage space in the basement are for the classroom area. Each classroom had a wood/coal stove installed in the small alcoves at the northwest and northeast corners of the building. Also along the north wall are two five-panel wood doors, placed on either side of the short wall section where the folding partition attached. These doors open directly onto stairs down from the classrooms to the landing at the north entry as well further down to the basement.

Upon entering the basement through modern doors, there is a storage room to the immediate left (east), kitchen to the far left (east), open area in the central section, and two restrooms to the right (west). Originally the bathrooms were two small (roughly 6'x11') storage rooms. The southernmost room was used for wood storage while the northernmost room stored coal. Each had an access chute to the outside. Pickup trucks would pull up outside along the building and unload into these chutes. After the wood stoves were replaced with butane stoves and after the installation of plumbing, these rooms were converted into restrooms for the students and teacher circa 1944. The wood storage became the boys' restroom and the coal storage turned into the girls' restroom. The girls' restroom contains a sink and a shower stall (for use by the teacher) as well as two toilet stalls, while the boys' restroom has one sink, one toilet, and one urinal. The loading chutes were closed and boarded up at this time as were the windows on this wall.

The teachers' living quarters were located in the basement of the school. The large room was divided, as in the upper classrooms, with a partition. This partition is no longer in place; however, markings can still be seen on the concrete flooring designating where it once stood. It appears that the teacher's quarters were placed to the eastern side, nearer the kitchen. The kitchen retains original cabinets and fixtures. Pieces of linoleum cover the floor in the kitchen only; the rest of the basement has concrete floors. It is unknown when the partition was removed in the basement. The storage space has three doors: one near the entry into the basement (western end of space), one at the eastern end that provides access into the kitchen, and one on the southern wall which leads into the former teacher's living quarters. It would make sense if the space was original because the doors at either end would allow access into the kitchen without going through the teacher's living area. (See footprint)

The Buckeye School building is currently 83 years old and in very good condition. The school maintains integrity of location, setting, association, and feeling, easily able to convey its rural beginnings. It also retains integrity of workmanship, design, and materials. While roof shingles have been updated to asphalt, the school building is extremely close to its original state, and retains many original elements, including siding, wood windows and doors, wood wainscoting, coat hooks, bookcases, blackboards, and playground equipment. Though the classroom divider is no longer in place, part of it appears to be in storage in the basement as well as the attic. Major updates occurred with the installation of electricity, indoor plumbing and restrooms, and natural gas heaters. Other updates include installing carpet over the original wood floors, covering the windows at the top of the north wall with sheetrock and a drop ceiling in the upper classrooms in the 1980s. Modern double doors at the basement entry were done in 1977. A small carpeted stage was built in the west classroom for conducting entertainment in the 1980s.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B** Property is associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- A** owned by a religious institution or used for religious purposes.
- B** removed from its original location.
- C** a birthplace or grave.
- D** a cemetery.
- E** a reconstructed building, object, or structure.
- F** a commemorative property.
- G** less than 50 years of age or achieved significance within the past 50 years.

Narrative Statement of Significance

(Explain the significance of the property on one or more continuation sheets.)

Section number 8 Page 5
Rural School Buildings in Colorado MPS

SIGNIFICANCE

The 1925 Buckeye School meets the registration requirements of the Rural Schoolhouse Property Type as specified in the Multiple Property Documentation Form *Rural School Buildings in Colorado*. The school is associated with the influence of formal education on rural settlements. The school building and its ancillary features provide physical evidence about the conditions of rural education that prevailed in Colorado well into the mid-twentieth century. It is therefore eligible for listing in the National Register under Criterion A, for historical significance in the area of **Education**. Buckeye School is the only school of District No. 55 that is still standing and in its original location. The rural landscape surrounding Buckeye School has been maintained, still serving as farmland, allowing the school to tell the story of its rural beginnings. The Period of Significance for Education starts in 1925, with the opening of the school and ends in 1960, when the school closed due to consolidation. Because the period of significance extends into a timeframe of less than 50 years and it is appropriate to end it in 1960, Criterion Consideration G does not apply.

As was typical in rural areas, the school building also hosted various social gatherings such as dances, dinners, and cultural events. In addition, it served as a polling place and meeting facility for the local 4-H Club. Because of its role as a community center, the Buckeye School is also eligible through the MPDF under Criterion A for its association with the **Social History** of the community. The period of significance for Social History starts in 1925, with the opening of the school. As the historically significant activities associated with the school extend into a period less than fifty years before the nomination date, and because these recent activities are not considered to be exceptionally important, the period of significance ends in 1960, in keeping with National Register guidelines.

Finally, the Buckeye School represents the characteristics of the schoolhouse property type as defined in the MPDF, making it eligible under Criterion C in the area of **Architecture**. The school is a well preserved example of an early twentieth century rural school building, displaying typical features such as its larger size, two classrooms divided by a folding door, exterior materials, and gabled entry vestibules. The school also exhibits a floor plan that demonstrates one of the key innovative changes exhibited after 1920- clustered windows. This was the result of educational reformers recommending more light and air in classrooms for students. The Buckeye School's clustered windows stand along the south wall, allowing much natural light to flood the classrooms. The period of significance for Architecture is the year of construction- 1925.

The building also housed a kitchen, activity room, and teacher's living quarters in the basement, making the school larger than earlier rural schools. "Generally rural schoolhouses with basements appear after the turn of the century and their numbers are relatively few" (Doggett and Wilson, 1999). The basement activity room was used for indoor recess in bad weather.

While playground equipment and outbuildings were regularly located on school grounds, most of these ancillary resources are rarely extant. Although Buckeye School has lost its small stable and two privies (removed after bathrooms were installed inside), the merry-go-round, swing set, teeter totter, slide and flagpole remain in the yard south of the school.

Historical Background

A Union Pacific Railroad line ran from Fort Collins to Buckeye, opening for traffic on September 1, 1924. During this time, there was a station house, railroad bunkhouse, corrals and depot directly east and parallel to the Buckeye Lateral Ditch and North County Road 17. Railroad cars shipped sheep and

**National Register of Historic Places
Continuation Sheet****United States Department of the Interior
National Park Service**Buckeye School
Larimer County/ ColoradoSection number 8 Page 6
Rural School Buildings in Colorado MPS

livestock to larger stockyards in Denver and elsewhere. The Munroe Ranch was a large sheep producer in the upper Boxelder Creek drainage, northwest of Buckeye. Edward F. (Buster) Munroe, who attended Buckeye School, was the last person to bring his herds of sheep down Poudre Canyon, off the Mummy Range summer grazing in the late 1960s. Several thousand head of sheep were brought down to the ranch along County Road 80. After abandonment of the line in 1965, railroad tracks and buildings were disassembled and removed. The Buckeye Lateral Ditch, however, is still one of the main irrigation ditches in use for North Poudre Irrigation Company.

School District records indicate a school operated under the name Buckeye School in 1925, prior to the current nominated school building opening, but where these students met is not known. This earlier school is documented in the Teacher's Register of January 19, 1925, showing a J.W. Peterson teaching 21 students from January to May 15, 1925, and Miss Hannah Hoffman teaching 24 students from September 8, 1925, to May 21, 1926.

School District No. 55 contained the following schools: East, Round Butte, Buckeye, Soapstone, Fairmont and Spring School. A school was built for every 9 miles of populated land. At the May 25, 1925, School District No. 55 Board of Directors meeting, the Board discussed plans for the Buckeye Schoolhouse. They traveled to Buckeye to inspect the area for a school site and chose the space between some ranch buildings and the railroad right-of-way (District Proceedings, May 25, 1925). This is where the school still stands today, on the southeast corner of West County Road 80 and North County Road 17 in northern Larimer County. The school is approximately seven miles north of unincorporated Waverly and 15 miles northwest of Wellington and sits in the center of the Buckeye community.

Historical documents show that C.V. Owens donated three acres of land on which to build Buckeye School, including the oil and gas rights. He also planted some trees, donated concrete for a cistern, and offered to haul gravel for a playground. On June 15, 1925, O.A. Decker was awarded the bid to build the Buckeye School. It was to be 26' X 60' with ten foot ceilings for \$3,630. A cistern supplied water for the school. The cistern sits south of the school building but is no longer used. The cost of construction exceeded the bid and on November 7, 1925, Decker submitted the final invoice, bringing the total cost to \$4,983.17. It was considered to be a very large school, having two upper classrooms and a basement with living quarters for the teacher.

School was held from 9:00 a.m. to 4:00 p.m., September through May, with sunlight being the main source of lighting, explaining why most of the windows are on the south wall. Kerosene lanterns served as back-ups. The school year was conducted so as to allow students summer-time off to work on the family farms. A wood/coal cook stove was located on the east wall of the teacher's living quarters. According to oral history, students would bring potatoes to school and the teacher would bake them in the cook stove, thereby providing a hot lunch.

Students attended Buckeye for 1st through 8th grades, and then went to the Waverly School for "high school." Buckeye School was the last school built in District No. 55. In 1926, the school district underwent a consolidation. Students from the East, Round Butte, Buckeye, Soapstone, Fairmont and Spring schools were sent to Buckeye, Wellington and Carr schools. This increased the enrollment of Buckeye School. The development of several oil wells in the north Wellington area occurred at this time. Many of the oil workers sent their children to Buckeye School since it was "new." Teacher Register books for District No. 55 indicate Mr. Jess Trower was the first teacher in the new school, operating from August 30, 1926 to May 1927. He had 37 students enrolled for 1st through 8th grades, and was paid \$120 per month.

Section number 8 Page 7
Rural School Buildings in Colorado MPS

In the school's early history, the Buckeye Square Dancing Club, Soapstone Grazing Association, and the Buckeye Ladies Club regularly used the building for meetings, as did School District No. 55. A used, but well preserved, piano remains in the west alcove. It was played for square dancing until they acquired a record player. The record player and original 78 RPM square dancing records still exist and are in safekeeping with current Club members.

The Buckeye Busy Belles (girls) and Buckeye Buck-N-Ears (boys) 4-H group formed in 1957, beginning with seven members. In 1958, the groups merged and became the Buckeye Buck-N-Ears 4-H Club. In 1960, only two years later, enrollment increased to 17 members. The club held its monthly meetings at the Buckeye School until 1995, when enrollment exceeded the 100 person capacity of the building. The Club has since returned to the Buckeye School and its founding roots.

In addition to hosting the 4-H Club, Buckeye School was the site of the polling place for Precinct No. 404 for many years. When Larimer County instituted Vote Centers and implemented the Federal Americans with Disabilities Act, the county discontinued voting at Buckeye School. However, a historic voting booth remains in the basement storage room.

In 1933, Congress set up Civilian Conservation Corps (CCC) camps as work programs for young men, ages 17-23, all over the nation. CCC Camp No. 809, Buckeye CCC Camp, was in operation from 1935 to 1940. Soil conservation was the main focus of CCC Camp No. 809, as gully control and erosion were important issues for the 90,000 acres comprising the Buckeye and Boxelder projects. During the camp's five-year existence, over 240,000 trees were planted. Other accomplishments include the building of one large dam, 32 small earthen dams, and irrigation ditches, one of which runs right by the Buckeye School, thereby increasing the availability of water for irrigating fields and crops (Ahlbrandt, 1998). Trees around the school are irrigated with water from these ditches. The Camp was located in the upper Boxelder Creek drainage, about 2 miles northwest of the school, with Gillman Mountain as its backdrop.

Over time, the school saw upgrades such as electricity and indoor plumbing. With the installation of plumbing, a drinking fountain was installed in the east classroom as well as basement restrooms. The wood stoves were first converted to butane stoves then to propane, and finally to natural gas. The thinking in the community was that if the school facilities were updated, it stood a greater chance of not being closed by the consolidation. In 1959, a major consolidation took place and the new district, Poudre R-1, closed the Buckeye school on July 1, 1960. Students were then sent to Waverly School. It is not known what happened to the other schools in the District. Some were moved from their original locations and refurbished as homes (Munroe, 2008).

After the District officially closed the school in 1960, community members were allowed continued use of the school as long as they maintained the building. When the district talked about selling the property in 1967, community members, including the 4-H club, organized and eventually purchased the property in 1970 for \$767.00. The Buckeye Community Club obtained the school building and 3 acres of land with 26 families contributing the money. The Buckeye Club uses the building as a community gathering place. Square dancing, box lunches, picnics, plays, weddings, birthday parties, monthly 4-H business meetings, summertime 4-H "tour-day" picnics, Christmas dinners, and other activities have occurred in the building since consolidation.

In 1993, Karrie Ackerman planted a wind break of 285 bare root evergreen trees for her 9th grade civics class at Wellington Junior High. In 1999, 17 large trees were donated by members and planted around the school. Club members routinely water these trees and both the building and grounds receive

**National Register of Historic Places
Continuation Sheet****United States Department of the Interior
National Park Service**

Buckeye School
Larimer County/ Colorado

Section number 8 Page 8
Rural School Buildings in Colorado MPS

regular maintenance. Summer clean-up days for both the Community Club and the 4-H Club coincide with summertime picnics.

Buckeye Community Club charges members yearly dues to cover the water, insurance, utilities, and maintenance supplies to keep up the grounds and building. Recently, members painted both the men's and women's restrooms. Buckeye Community Club also holds fundraisers to increase the Club treasury. In the past, this included tractor pulls, turkey shoots, food/beverage concessions at farm auctions, and raising and marketing sweet corn, as well as receiving memorial contributions. The Buckeye Buck-N-Ears 4-H Club applied for and received \$500 in 4-H Community Pride Grants for necessary repairs and improvements to the building.

The school building gives members a place to gather for monthly potlucks, play games and cards or just socialize. Sometimes, potlucks are held in conjunction with meetings and presentations of general community interest. Recently the club hosted a discussion on the uranium mining proposal affecting northern Weld County. An agricultural tour day and open house at Buckeye School is being discussed as a potential fundraiser for 2008.

Clearly, the community has formed a long-standing tradition of support for the school and its agricultural history. The Buckeye School building was "created by a community for its children, [and] stands today as a symbol of the communities' spirit" (Boresen 1999). It serves as a visible reminder of the high value and importance the early settlers had put on educating their children. The Buckeye School retains its historic integrity and is a prominent landmark for the community of Buckeye.
